GDSN, Inc. is currently accepting final submissions for complex functionality for inclusion in the 2009 – 2010 GDSN Development Roadmap. Any change request (CR) that is deemed complex is eligible for consideration and must be submitted <u>no later than 19 September 2008</u>.

This is an important milestone date in developing the 2009 – 2010 GDSN Development Roadmap and Budget as part of the GS1 and GDSN annual planning process. Once submitted, each project will be reviewed by the community prior to prioritisation by the GDSN User Group vote, and an impact analysis will be completed for all stakeholders. Once completed, GDSN will propose recommended projects to the GDSN Board for approval as part of the overall GDSN Development Roadmap, budget, and financial model for 2009 – 2010. Any complex CR's received after the cut-off date will be held and considered in the 2010 – 2011 Development Roadmap. Simple CR's do not require GDSN Board approval and will continue to be submitted to the GDSN Business Requirements Group (BRG) for processing and solution development.
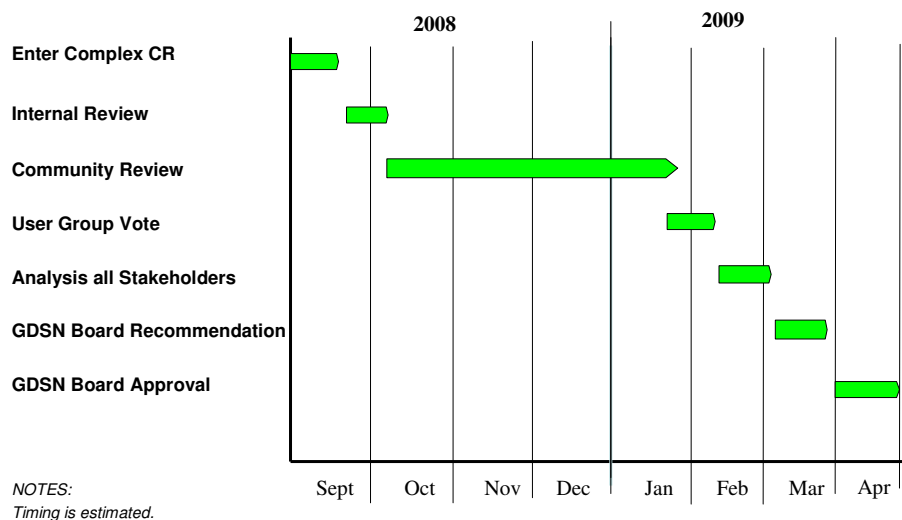

Please enter any complex CR here: www1.ean-ucc.org/changerequest/login.cfm?CFID=18484&CFTOKEN=60487294

Why enter a complex CR?
- Expanding and improving a capability that is being used today in GDSN
- Correcting issues that are causing disruptions/errors in the network
- Increasing adoption and implementation
- Expanding GDSN into different verticals

Other key milestone dates in the process include:

2009 / 2010 GDSN Prioritisation Process
