

EPCIS-based fish traceability pilot: outline incl. live demo

Tim Sadowski + Ralph Tröger | 2013-10-10
GSMP Autumn | Lisbon | Lunch & Learn

Why is EPCIS 1.1 so brilliant for (fish) traceability purposes? [1/2]

Companies have to ensure **traceability** for **each lot of fish** from catch to consumption

Consumers want to obtain not only static, but also **dynamic traceability information** about **products**.

Authorities want to be able to **control compliance with legal regulations**.

Why is EPCIS 1.1 so brilliant for (fish) traceability purposes? [2/2]

What has GS1 to provide in order to meet these requirements?

- Documentation of **transformations**
 - **Lot** identification
 - **Instance/ lot-related master data**
 - Documentation of **aggregations/ disaggregations**
 - **Scalable, robust, viable, decentralised** approach
- ➔ **EPCIS/ CBV 1.1** fulfils **ALL** the above requirements.

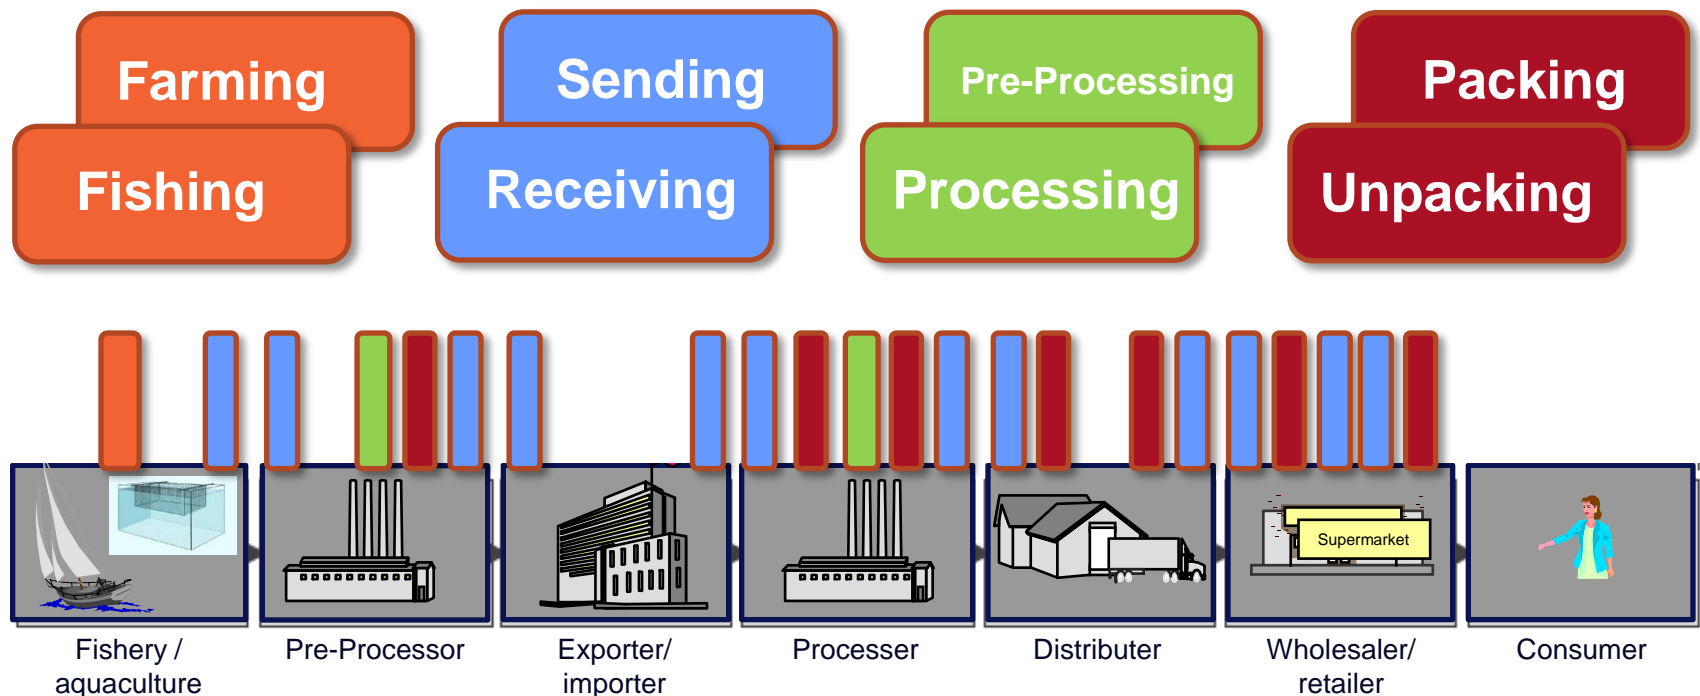

The fish traceability pilot in a nutshell [1/2]

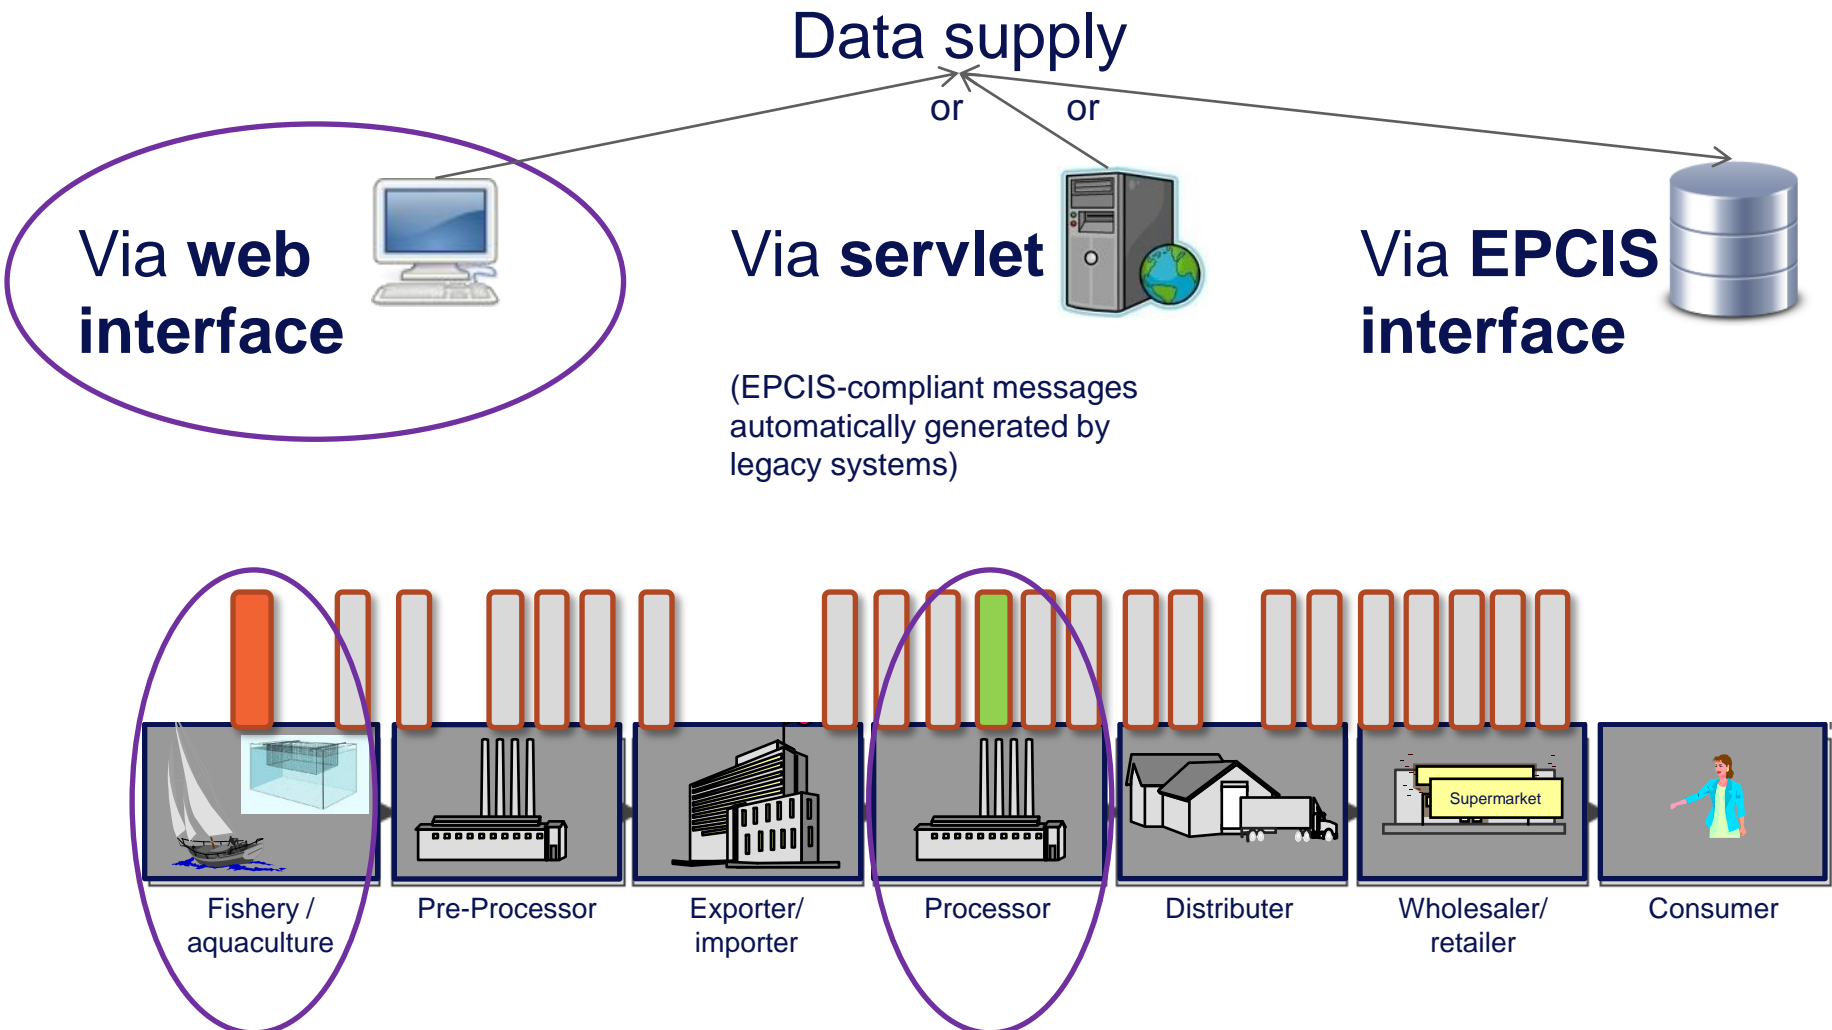

- Participating organisations represent **all relevant stakeholders** in the **fish industry**:

Countries and international organisations	Fisheries	Fish processors	Other	Retailers/Wholesalers
    	  	      	    	   

The fish traceability pilot in a nutshell [2/2]

- Achieve **traceability from catch to consumption** by capturing and exchanging all relevant process steps **via EPCIS** events:

Try it out yourself!

**Thank you for your attention.
Please do not hesitate to contact us.**

Informationen zum Produkt

GTIN/EAN:	04260278110016
Tracking-Code:	KF124F
Produktart:	Saithe(=Pollock)
Fanggebiet:	North Sea (Subarea IV)
Fangmethode:	Kiemen- und Verwickelnetze - Kiemen- und Verwickelnetze (ohne nähere Angaben)

Fangperiode:	09.07.2013 - 10.07.2013
Schiffsname:	MSMoeve (6645)
Anlandehafen:	DE CUX
Herstellungsbetrieb:	Kutterfisch-Zentrale GmbH, Cuxhaven, Deutschland
Zuvor gefroren:	ja
Mindesthaltbarkeitsdatum*:	24.07.2013

*Bitte im Tiefkühlschrank lagern und nach dem Auftauen nicht wieder einfrieren.

Verpackung und Inhalt

Der Seelachs lebt in Gewässern um Island, Spitzbergen, Norwegen und in der Nordsee. Durch das Skagerrak dringt er auch ins nördliche Kattegat vor. An Großbritannien vorbei zieht er bis in iberische Gewässer. Die wichtigsten Fangnationen sind: Norwegen, Faröer, Island, Frankreich, Kanada, Großbritannien und Deutschland.

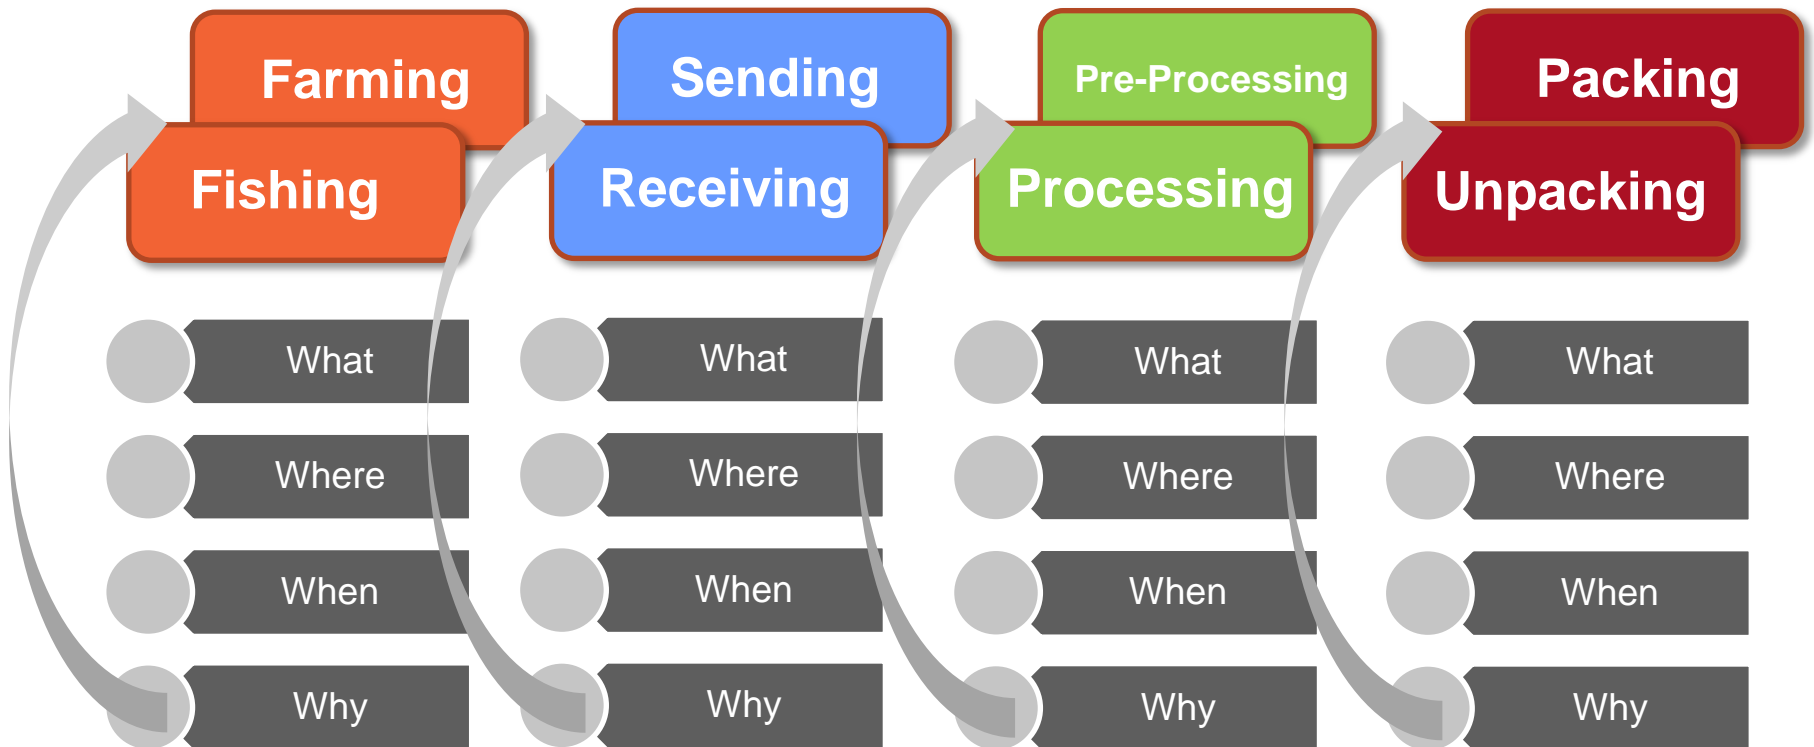

Das hier vorliegende Los wurde in nachfolgendem Gebiet gefangen:

A. North Sea (Subarea IV)
