Healthcare Managing master data

Critical business processes require reliable product and location data:

- Distribution systems
- Inventory replenishment
- Billing/accounts payable
- Traceability systems (pedigree systems, adverse event reporting, product recalls, barcode point-of-care systems,, ...)

Inaccurate or bad data add cost and risk

Healthcare Managing master data *today*

Product catalogues - current situation:

- **Varying methods of communicating new items**

Supplier A - printed catalog 
Supplier B – price quote 
Supplier C – PDF data 
Supplier D – Excel tables 
Supplier E – text data 
Supplier F – link to website 

- **Varying methods of communicating updates/changes (or not communicating)**
- **Varying descriptions and levels of detail (product attributes)**

Healthcare No standardised product ID

Same product – different numbers

For example*:

3M product with reference # 8630

Same product in different databases of distributors:

- Allegiance M8630
- Owens & Minor 4509008630
- BBMC-Colonial 045098630
- BBMC-Durr 081048
- Kreisers MINN8630
- Midwest TM-8630
- Pacific 3/M8630
- UnitedUMS 001880

Healthcare No standardised product ID

Different products – same number

For example:

Part Number 10313 in Premier Inc. Product Item Master refers to

- Medtronic's - "NEEDLE CARDIOPLEGIA ADULT 16GA 5/8IN TIP 10IN"
- Hantover's - "CARTRIDGE REPLACEMENT STUNNER YELLOW F/CALVES/HEAVY HOGS"
- Chattanooga Group's - "ACCESSORY TRACTION REPLACEMENT STRAP XL FOR HALTER THORACIC RESTRAINT"
- HF Scientific's - "TEST KIT WATER FREE CHLORINE DPD 25ML SAMPLE PHOTOMETRIC 1000/PK"

No standardised product information

Inconsistent packaging data

- Order 20 cases, receive 20 boxes
- No uniform Unit of Measure standard

Healthcare Bad data add cost and risk

- **Inaccurate and inconsistent data in the Healthcare supply chain add billions of \$, €, ... in costs**
 - Supply chain information inefficiencies
 - Inaccurate data in transactions
 - Purchase orders and invoices with errors
 - Manual work-around processes to correct errors
- **Inaccurate and inconsistent data add risk to patient safety**
 - Disruptions may result in the inavailability of products to treat a patient
 - Medication errors due to incorrect relabeling

Healthcare Managing master data *tomorrow*

Supplier = data source

Needs single point-of-entry

- One database to load new item data and update data on existing items

Needs security

- Authorisation access by supply chain partners

Standards-based

- Standard identification keys
- Predefined (set of) product attributes

Hospital = data recipient

Needs single point-of-truth

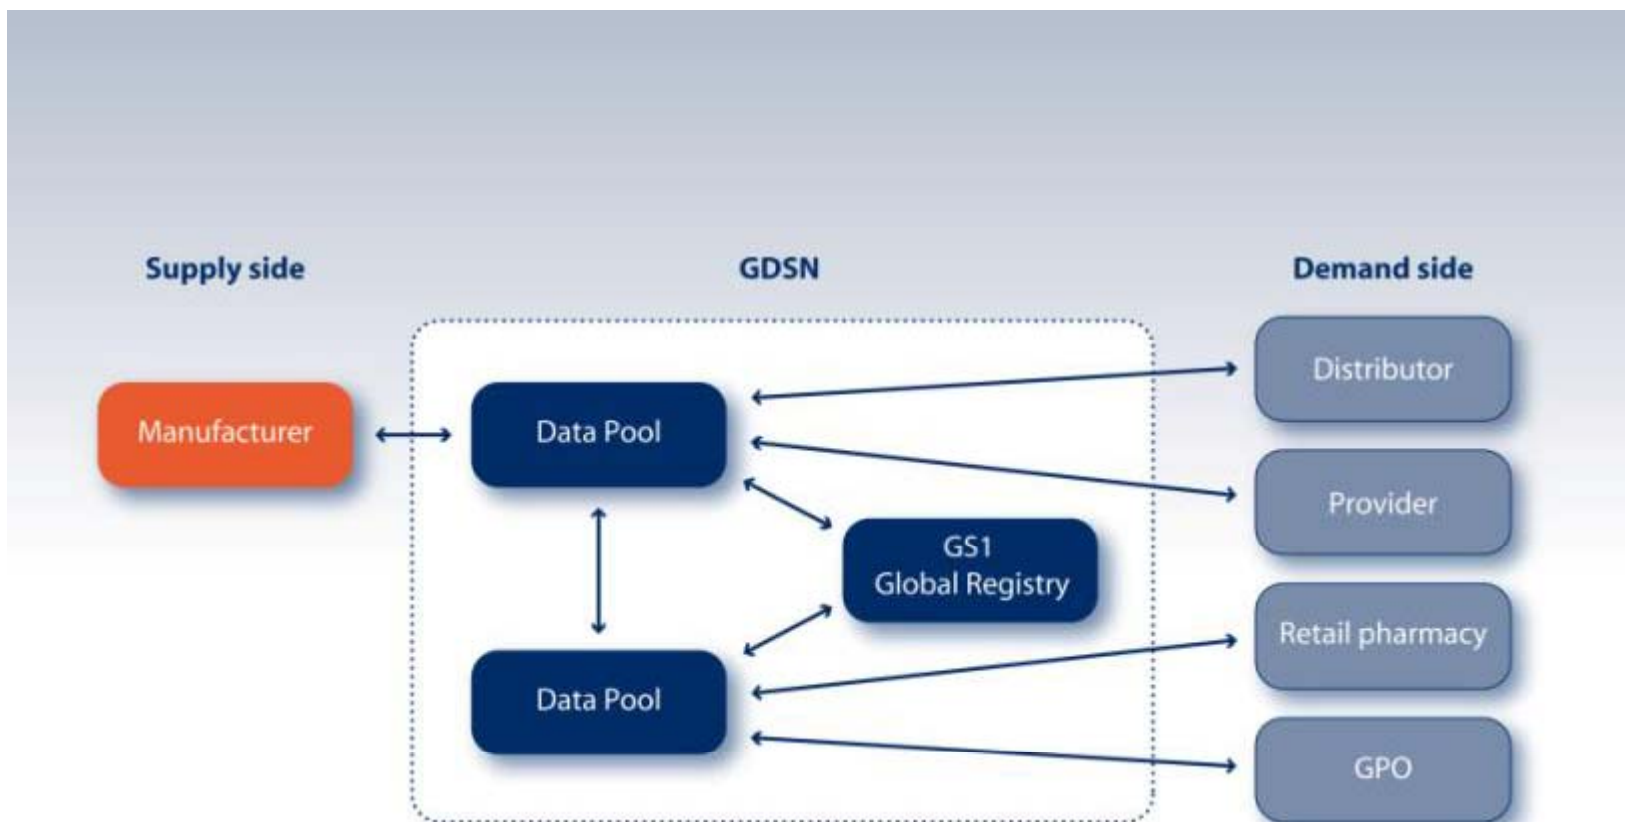

- One source for up-to-date, accurate data
- Continuous synchronisation

Standards-based

- Standard identification keys
- Consistently formatted information
- Complete information

Healthcare Global Data Synchronisation

↔ GDSN data exchanges

GS1 Healthcare How GDSN works

1. Load data

- The seller registers product and company information in its data pool

2. Register data

- A small subset of this data is sent to the GS1 Global Registry

3. Request subscription

- The buyer, through its own data pool, subscribes to receive a seller's information

4. Publish data

- The seller's data pool publishes the requested information to the buyer's data pool

5. Confirm & inform

- The buyer sends a confirmation to the seller via each company's data pool, which informs the seller of the action taken by the buyer using the information

GS1 Healthcare **GDSN data attributes**

25 mandatory attributes

- 8 mandatory attributes required to register products in the GS1 Global Registry
- 17 mandatory attributes to operate in the GDSN

200+ optional attributes

- Trading partners decide whether to exchange additional information
- There are currently 203 optional GDSN attributes which support healthcare specific needs
- 33 new data requirements are being added to the GDSN standard

Data Synchronisation & Product Classification for Healthcare

Global GDSN Implementation Initiative for Healthcare

A global implementation initiative to use the GDSN's unique position to **meet current and emerging requirements for electronic product catalogue data**, including pending regulatory demands and commercial needs for reliable product data between healthcare trading partners.

Global GDSN Implementation Initiative for Healthcare

- Launched June 2009
- Today:
 - Participation: 26 healthcare organisations
 - Connections: 57 live
 - Finalised Phase 2 report: sharing lessons learned
- Next step:
 - Expansion to more countries and more participants

Healthcare Results 2007 DoD Pilot

- **Opportunities identified to save costs**
 - Better contract price available
 - Saved \$18.7M so far at 30 + hospitals
- **Opportunities identified to increase DoD eCommerce**
 - Moved \$7.766M to eCommerce services
- **Created robust DoD & VA Med Surg product data bank of 1 million + records**
 - Accurate master records for 93% (\$407M) of DoD buys
 - Joint DoD & VA access to pricing, packaging, product ID
- **Created active collaboration with Healthcare Industry**
 - Ongoing pilots with manufacturers and PV distributors
 - PDU as goal within Healthcare Standards Organizations

ONE global standard for data synchronisation in healthcare

Putting the standards at work...

Healthcare How Abbott got started

- **Participated** in standards development work groups
- **Participated in Australian pilot**
 - Monash Project 2006
 - Demonstrated supply chain process improvements through data synchronisation - National Product Catalogue (through GS1net, a GDSN-certified data pool)
- **Participating in Global GDSN Implementation Initiative**
- **Live in « GDSN in Retail »**

Goal: Single global source of truth for product data

This Week:

- Wednesday, 15:30 – 17:00 (breakout sessions)
 - Introduction session: Data synchronisation in healthcare
