|---------|-------------------|----------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1.8     | May 2022          | Global Data Model –<br>Global Sub Team | <ul> <li>WR-21-460 - Section 1.1.1 - Add sentence indicating users should refer to local requirements and regulations when determining data that is required for local data exchange; users should reference the Log of Changes when looking for data that has been updated or deleted from the AIG.</li> <li>WR-22-030 - Section 6.4 - Add text to business process note for attribute Net Content Statement (BMS ID 3741) indicating that this attribute should not be used to specify the size of fruits and vegetables. Section 6.2.6 - Add example of use of Net Content and Net Content statement for a package of apples.</li> <li>WR-22-029 - Section 7.7 - Add a business process note for attribute Usage Period After Opening (BMS ID 3709) to indicate best practice where products within a multi pack are individually labelled with different values of the safe-to-use after opening period.</li> <li>WR-22-092:         <ul> <li>Sections 4.1 and 4.2 business process notes on GLNs and Section 17 standards list - Replace the name and URL of the GLN Allocation Rules Guidelines document with the new name (GS1 GLN Allocation Rules Standard) and URL.</li> <li>Section 17 standards list - Remove the reference to the Package Measurement Rules Implementation Guideline document, which has been deprecated.</li> </ul> </li> </ul> |

## Disclaimer

GS1<sup>®</sup>, under its IP Policy, seeks to avoid uncertainty regarding intellectual property claims by requiring the participants in the Work Group that developed this **GS1 Global Data Model Attribute Implementation Guideline** to agree to grant to GS1 members a royalty-free licence or a RAND licence to Necessary Claims, as that term is defined in the GS1 IP Policy. Furthermore, attention is drawn to the possibility that an implementation of one or more features of this Specification may be the subject of a patent or other intellectual property right that does not involve a Necessary Claim. Any such patent or other intellectual property right is not subject to the licencing obligations of GS1. Moreover, the agreement to grant licences provided under the GS1 IP Policy does not include IP rights and any claims of third parties who were not participants in the Work Group.

Accordingly, GS1 recommends that any organisation developing an implementation designed to be in conformance with this Specification should determine whether there are any patents that may encompass a specific implementation that the organisation is developing in compliance with the Specification and whether a licence under a patent or other intellectual property right is needed. Such a determination of a need for licencing should be made in view of the details of the specific system designed by the organisation in consultation with their own patent counsel.

## **1** Introduction

The purpose of the GS1 **Global Data Model** (GDM) is to simplify and harmonise the exchange of master data. The GDM will identify and define—in a globally consistent way—the set of foundational attributes needed to manage a product through its life cycle, such as: listing, ordering, moving, storing, selling and discontinuing a product both digitally and physically. The intention of the GDM is to enable an improved Consumer experience and to reduce complexity by harmonising foundational data across the industry.

The purpose of the GS1 **GDM Attribute Implementation Guideline** (AIG) is to provide clarity and practical business advice regarding the use of the GDM attributes and, in some cases, instruction on managing the interaction of multiple attributes.

## **1.1** How to Use This Guideline

#### 1.1.1 Relationship to GDM and Other Standards, Solutions and Guidelines

The GS1 **GDM Attribute Implementation Guideline** is intended to be used in conjunction with the GS1 **Global Data Model** and the GS1 **Attribute Definitions for Business** (ADB) standards. This document assumes a general familiarity with the Global Data Model and its concepts. If additional background information is needed, links to GDM training materials can be found in Section <u>17</u>.

The unique identifier providing a common link between these documents is the GS1 **Business Message Standard Identifier** (BMS ID), which is also used to identify attributes throughout many of the GS1 standards, guidelines, solutions and tools, including the GS1 **Global Data Dictionary** (GDD), GS1 **GDM Interim Navigator**, GS1 **GDM Attribute Analysis Tool**, **Verified by GS1**, GS1 **Global Data Synchronisation Network** (GDSN) and the GS1 **Trade Item Implementation Guideline** (TIIG). The GS1 BMS ID is the key/gateway to all elements, technical & business, for all attributes. Links to these and other applicable GS1 documents and solutions can be found in in Section <u>17</u>.

The **Global Data Model** standard provides the BMS IDs of all attributes included in the Global and Regional layers of the model, describes the layer that is applicable to each product category and sub-category for each attribute, and further defines restrictions on Mandatory and Conditionally Mandatory attributes. The GDM standard also contains selected reference material from the ADB, GDD and GDSN standards.

Information in this document will be modified to align with changes in the **Global Data Model**. Users should reference the <u>Log of Changes</u> at the beginning of this document when looking for data that has been updated or deleted from the **GDM Attribute Implementation Guideline**.

Users should refer to **local** requirements and regulations when determining data that is required for local data exchange.

#### **1.1.2 Document Structure**

Each section of this document contains guidance for a category of attributes that are related by product type, business process or data value similarities. In some cases there are groups of attributes that are commonly exchanged together or are dependent upon one another.

Many of the attribute sections contain visual examples illustrating best practices for populating the values of individual or groups of attributes. Product image examples have been drawn from many regions around the globe. These examples are not exhaustive, rather they aim to provide high level guidance about the types of information contained in the attributes and how the content may differ under various conditions.

Some attribute sections also provide a sampling of code values, names and definitions that are commonly used when populating an attribute associated with a specific code list. In these cases, reference links to the full code list documentation are also provided.

Finally, each attribute section contains a set of business process notes associated with each attribute in the group. These notes are designed to relate useful day-to-day recommendations when considering how to populate the data for these attributes. For example, some attribute values could

vary depending on the relationship between buyers and sellers (e.g., a single seller may have different product effective dates for different buyers). These types of business process tips and recommendations are described in the business process notes. For some attributes no business process notes were developed (designated with the notation "no additional notes"); these are cases where the existing definitions are deemed to be sufficient to fully describe the use of the attributes.

Also included are the BMS ID, ADB Attribute Name and ADB Attribute Definition for each of the attributes. There will certainly be cases when a user of this document determines that, even beyond the examples and business process notes provided, further information is needed to fully clarify how an attribute is used relative to a market-specific condition. Readers are encouraged to access the referenced standards as needed. **Most importantly**, when developing information to be exchanged, it is recommended to refer to local/regional market regulations and to your local GS1 Member Organisation (MO) for best practices.

#### **1.1.3** Technical Aspects of Attributes

The GDM is a technology agnostic standard, i.e., it provides a list of data attributes without assumptions as to the technology that is used to implement the exchange of data, be it the GS1 GDSN (Global Data Synchronous Network), solution provider API, Excel spreadsheet, or some other method. The guidance provided in this document attempts to conform to this technology agnostic ideal as much as possible. Where technical details are required to clarify attribute usage or address common business processes, specific technology details or references to technology-specific documents may be provided. These references are included only to provide additional clarity on the business usage of the attributes themselves and not to promote the usage of any specific technology for implementation.

There are scenarios where "technical" attributes will need to be exchanged, such as units of measures (cm or mL), currency (for pricing) or language. The manner in which these types of values are exchanged depends on the implementation technology and market requirements. For example, there may be language dialect differences per target market (e.g., there is French for France and French for Belgium) that are traded if they appear on the package. Some attributes may be repeated for multiple languages (e.g., *Preparation Instructions* may be repeated for multiple languages for the same *Preparation Type Code*). The relationship between the GDM attributes and these technical attributes can be found in the GDM standard spreadsheet.

Other technical aspects of an attribute may include its data type, size and repeatability, i.e., all of the meta data associated with an attribute. Once again, these may be dependent on implementation. Users are encouraged to work with their solution provider or local GS1 MO to help determine how these technical aspects impact your implementation.

#### **1.2** Comments and Questions on the Standards

While utilising this guideline (or other GS1 standards), users may encounter a situation where they are unable to find a specific attribute in the GDM or code value in a specific code list that meets the need of their product. To resolve this challenge, the first step is to look further into the GDD and GDSN standards, which contain all GS1 standard attributes and GS1-maintained code lists. Some local code lists are also posted on the GDSN Local Code List web page (accessible through the GS1 GDSN standards web page at <a href="https://www.gs1.org/standards/gdsn">https://www.gs1.org/standards/gdsn</a>). However, your local GS1 MO is the best resource when researching market-specific codes. Finally, your local GS1 MO may, through the GDM governance process, propose work requests to add/modify attributes and codes when the need arises.

Comments on, and questions about, this document may be addressed to the Global Data Model team at <u>globaldatamodel@gs1.org</u>.

#### **1.3 Guiding Principles**

The GS1 **GDM Attribute Implementation Guideline** was developed around a common set of guiding principles.

- Utilise the **GS1 Style Guide** when referring to styling principles.
- Always use non-branded images.

- Minimise the detail required to create clarity for users. Create the visual equivalent of a GS1 Attribute Definition for Business where appropriate.
- Business Process Notes serve as practical guidance on use of an attribute or attribute set. They
  serve as "tips" in addition to existing attribute names and/or definitions. They shall not repeat
  or restructure existing names or definitions.
- Link to the location of existing standards where more detail could be useful.
- When referring to another attribute in the Business Process Notes, refer to the full ADB business name (or, if no ADB name is available, the **GS1 Global Data Dictionary** (GDD) name) in *italics*.
- Indications of Yes/No responses (such as those for Boolean logic) will be expressed as True/False.
- The word "shall" is to be used rather than "must".
- When referring to codes within an illustrated example or diagram, use the more businessfriendly Code List Name rather than the Code List Value. When providing a table of codes to illustrate commonly used codes for a code list, both the Code List Name and Value should be given.
- In general, use the term "buyer" when referring to an entity that purchases products (a demand side partner), for example a recipient or retailer, except where a more specific term is required by context.
- In general, use the term "seller" when referring to an entity that supplies products (a supply side partner), for example a manufacturer or distributor, except where a more specific term is required by context.

## 2 Trade Item Hierarchy

A trade item hierarchy consists of multiple GTINs linked together to represent a product's packaging hierarchy levels. Each level of the hierarchy is assigned a unique GTIN, and represents that specific unit, pack, case, or pallet.

The objective in this section is to understand how to set up trade items with different hierarchies – a simple hierarchy, a complex hierarchy, a hierarchy containing a variety pack and a hierarchy containing a display unit.

**Important**: GTINs depicted in the examples in this section are represented generically (e.g. GTIN A, GTIN B, etc.). The specifics of GTIN management and options are out of scope for the Attribute Implementation Guideline.

For more information on the <u>GS1 GTIN Management Standard</u>, please refer to <u>www.gs1.org/gtinrules</u>.

## 2.1 Simple Hierarchy

| GTIN   | Packaging<br>Level Code | Product<br>Description                                      | Count of<br>Each<br>Specific Pr<br>oduct | GTIN<br>(Global<br>Trade<br>Item<br>Number)<br>of the<br>Contained<br>Product | Number of<br>Different<br>Products | Total<br>Count of<br>All<br>Products | Base Unit<br>Indicator | Consumer<br>Unit<br>Indicator | Orderable<br>Unit<br>Indicator | Shipping<br>Unit<br>Indicator | Number of<br>Layers per<br>GTIN | Number of<br>Units per<br>Layer in a<br>GTIN |
|--------|-------------------------|-------------------------------------------------------------|------------------------------------------|-------------------------------------------------------------------------------|------------------------------------|--------------------------------------|------------------------|-------------------------------|--------------------------------|-------------------------------|---------------------------------|----------------------------------------------|

## **2.6 Hierarchy Attributes – Business Process Notes**

These attributes must be evaluated in conjunction with each other to understand a specific GTIN.

| BMS<br>ID | ADB Name                    | ADB Business Definition                                                                                                                                | Business Process Notes                                                                                                                                                                                                                      |
|-----------|-----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 56        | Base Unit Indicator         | The indicator that specifies this product does not contain another intended sellable unit.                                                             | The lowest level of the hierarchy shall be designated as the base<br>unit. The base unit has no smaller units identified by a GTIN<br>contained within it. In the case of assortments, each hierarchy<br>shall have at least one base unit. |
| 57        | Consumer Unit<br>Indicator  | The indicator that specifies the product can be<br>purchased or, in some trade channels (e.g.,<br>food service, healthcare), used by, the<br>consumer. | At least one level of the hierarchy shall be designated as a consumer unit. Consumer units are the levels of the hierarchy designated for sale to the customer.                                                                             |
| 58        | Shipping Unit<br>Indicator  | The indicator identifying that the information provider considers the trade item as a shipping unit.                                                   | It is expected that at least one level of the hierarchy be designated as a shipping unit. Exceptions include services and empty returnable assets.                                                                                          |
| 60        | Orderable Unit<br>Indicator | The indicator that specifies the product can be ordered.                                                                                               | At least one level of the hierarchy shall be designated as an orderable unit. The orderable unit and the shipping unit do not need to be the same, but often are.                                                                           |

| BMS<br>ID | ADB Name                                                         | ADB Business Definition                                                                             | Business Process Notes                                                                                                                                                                                                            |
|-----------|------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 66        | Packaging Level<br>Code                                          | The code that describes the product's packaging level.                                              | Packaging Level Code indicates whether the unit is an each, case, pack, etc. It does not imply that a unit is a consumer, shipping or orderable unit.                                                                             |
| 199       | Number of Different<br>Products                                  | The number of different products, each with a unique GTIN, within this item.                        | This is the number of unique GTINs at the next lower level of<br>the hierarchy. The attribute does not have to be populated if the<br>product is a base unit.                                                                     |
| 200       | Total Count of All<br>Products                                   | The total count of all products within this item.                                                   | This is the sum all pieces in the package, regardless of GTIN.                                                                                                                                                                    |
| 202       | Count of Each<br>Specific Product                                | The count of each specific product within this item.                                                | This attribute shows the total quantity of each unique GTIN on the next lower level of the hierarchy, by unique GTIN. <b>Count of Each Specific Product</b> and <b>GTIN of the Contained Product</b> shall be populated together. |
| 3619      | Count of This<br>Specific Item in a<br>Non-GTIN Logistic<br>Unit | The count of this specific item in the non-GTIN logistic unit.                                      | When a product is associated with a pallet to which no GTIN is assigned, this attribute is populated on the highest hierarchy level to which a GTIN is assigned.                                                                  |
| 203       | GTIN (Global Trade<br>Item Number) of the<br>Contained Product   | The GTIN that uniquely identifies the next lower level product within the packaging/item hierarchy. | This attribute provides the GTIN referenced in the attribute<br>Count of Each Specific Product. Count of Each Specific<br>Product and GTIN of the Contained Product shall be<br>populated together.                               |
| 3614      | Number of Layers<br>per GTIN                                     | The number of complete layers in the logistic unit identified by a GTIN, such as a pallet.          | Number of layers may also be known regionally as "HI".                                                                                                                                                                            |
| 3616      | Number of Layers<br>per non-GTIN Pallet                          | The number of complete layers in the pallet not identified by a GTIN.                               | When a product is associated with a pallet to which no GTIN is assigned, this attribute is populated on the highest hierarchy level to which a GTIN is assigned.                                                                  |
| 3618      | Number of Units per<br>Layer in a GTIN                           | The number of units in a complete layer in a logistic unit identified by a GTIN, such as a pallet.  | Number of units per layer may also be known regionally as "TI".                                                                                                                                                                   |

| BMS<br>ID | ADB Name                                             | ADB Business Definition                                                                                                    | Business Process Notes                                                                                                                                                                    |
|-----------|------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3620      | Number of Units per<br>Layer in a non-GTIN<br>Pallet | The number of units in a complete layer in a pallet not identified by a GTIN.                                              | When a product is associated with a pallet to which no GTIN is assigned, this attribute is populated on the highest hierarchy level to which a GTIN is assigned.                          |
| 3908      | Variable Measure<br>Indicator                        | The indicator that specifies the product content is variable.                                                              | A value of "true" indicates that the product has variable content.<br>A value of "false" indicates that the product has fixed content.                                                    |
| 3909      | Loose or Pre-Packed<br>Code                          | The code which informs the buyer of how the product is packed for the selling of products that vary in weight or quantity. | A value of "Loose" designates that the product is not packaged<br>but could be bagged at point of sale. A value of "Pre-packed"<br>designates that the product is contained in a package. |

## **3** Contact Information

This section deals with a group of attributes that provide detailed information used to communicate with a contact associated with a product. A contact may represent a range of entities, for example a manufacturer, brand owner, importer, customer or consumer support. Contact information may include a telephone number, email address or web site address and is commonly found on the consumer unit package. In addition, some sellers send information that could appear on business documents, such as invoices and packing slips.

The objective in this section is to understand how contact information is populated among this set of attributes.

## **3.1 Contact Information on a Product Label Example**

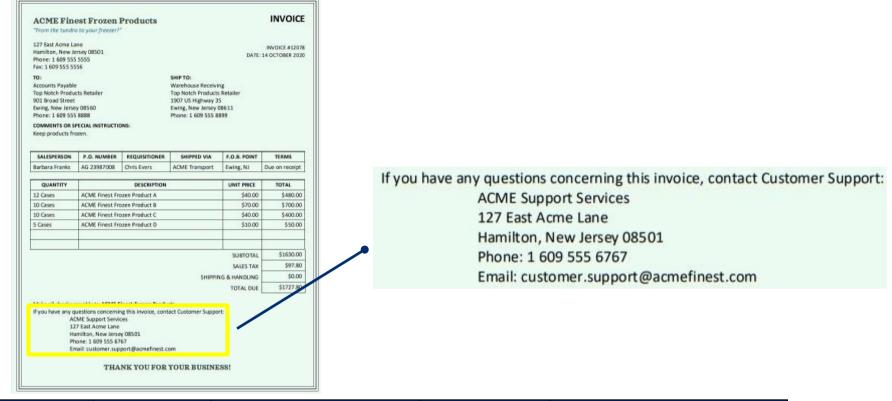

| Contact Type Code  | Contact                | Contact Address                          | Contact<br>Method Code | Contact Details               |
|--------------------|------------------------|------------------------------------------|------------------------|-------------------------------|
| Licensee Registrar | ACME Global            | 123 Acme Street,<br>Montreal, QC H3Z 2Y7 |                        |                               |
| Consumer Support   | ACME Consumer Products |                                          | Telephone              | 1-555-123-4567                |
|                    |                        |                                          | Website                | www.acmeconsumer.com/prodinfo |

#### Notes:

- 1. This is one example of contact information on a label. The types of contacts may vary depending on market, product or other local requirements.
- 2. Contact Method Code and Contact Details may be repeated for the same group of Contact Type Code, Contact and Contact Address.
- 3. Contact Address, if available, is used in conjunction with Contact and Contact Type Code.
- 4. Contact Details, if available, is used in conjunction with Contact Method Code.

## **3.2 Contact Information on an Invoice Example**

| Contact Type Code | Contact                  | Contact Address*                                  | Contact Method<br>Code | Contact Details                 |
|-------------------|--------------------------|---------------------------------------------------|------------------------|---------------------------------|
| Customer Support  | ACME Support<br>Services | 127 East Acme Lane, Hamilton,<br>New Jersey 08501 | Telephone              | 1 609 555 6767                  |
|                   | Services                 | New Jeisey 06501                                  | Email                  | customer.support@acmefinest.com |

**\*Note:** additional punctuation may be required between the street address and town for clarity.

## **3.3 Contact Information Options**

#### 3.3.1 Contact Type Codes

This table includes the three most commonly used Contact Type Code values. Please refer to the <u>GS1 Global Data Dictionary</u> for additional Contact Type Codes.

| Code Value | Code Name          | Code Definition                                                                                                                                                                                                            |
|------------|--------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| BZL        | Licensee Registrar | The party having legal responsibility for the product in the target market. This party is responsible for licensing and regulations within the target market and can be the manufacturer, importer, sales agent or broker. |
| CXC        | Consumer Support   | The party which provides product support to the end user of a trade item or a service                                                                                                                                      |
| CYC        | Customer Support   | The party which provides product support to the trading partner party to which merchandise is sold. (GS1 Code)                                                                                                             |

#### **3.3.2 Contact Method Codes**

| Code Value     | Code Name      | Code Definition                                                                                                                                                                                                                                       |
|----------------|----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| EMAIL          | Email          | Creating/sending/receiving of unstructured free text messages or documents using computer network, a mini-computer or an attached modem and regular telephone line or other electronic transmission media.                                            |
| MOBILE_WEBSITE | Mobile Website | The URL of the mobile commerce site (or WAP site) to a type of website than can be accessible from a smart-phone or other mobile device. This is typically different from a normal website due to the differing technologies used for implementation. |
| SOCIAL_MEDIA   | Social Media   | A social media address.                                                                                                                                                                                                                               |
| TELEFAX        | Telefax        | Device used for transmitting and reproducing fixed graphic material (as printing) by means of signals over telephone lines or other electronic transmission media.                                                                                    |
| TELEPHONE      | Telephone      | Voice/data transmission by telephone.                                                                                                                                                                                                                 |

| Code Value                | Code Name                | Code Definition                                                                                                                                                                                                                                                                                                                     |
|---------------------------|--------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TELEPHONE_FREE<br>_NUMBER | Telephone free<br>number | A telephone number that is billed for all arriving calls instead of incurring charges to the originating telephone subscriber. For the calling party, a call to a toll-free number is generally free of charge, depending on the geographical location of the caller and the method of calling (e.g. landline, mobile or internet). |
| WEBSITE                   | Website                  | The identification of a world wide web address.                                                                                                                                                                                                                                                                                     |

### **3.4 Contact Information Attributes – Business Process Notes**

Multiple instances of Contact Address (123), Contact (126) and Contact Type Code (127) may exist. The Contact Type Code describes the overall business usage and the content of the associated attributes can vary with each instance. In addition, multiple sets of Contact Method Code (134) and Contact Details (135) may be associated with each repeated group.

| BMS<br>ID | ADB Name               | ADB Business Definition                                               | Business Process Notes*                                                                                                                                                                                                                               |
|-----------|------------------------|-----------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 123       | Contact Address        | The contact's postal or physical address.                             | This information may typically be found on the product packaging or business documentation. In some areas, this could be required subject to local regulation.                                                                                        |
| 126       | Contact                | The contact, such as a person, company or department.                 | Could be a Company Name, Brand Name, Business Unit or<br>Department. While an individual name is not likely provided,<br>there are instances where an individual name could be provided<br>for specific purposes, such as accounting, licensing, etc. |
| 127       | Contact Type Code      | The code specifying the type of contact for a product.                | This information may typically be found on the product packaging or business documentation.                                                                                                                                                           |
| 134       | Contact Method<br>Code | The code specifying the method of communication to reach the contact. | This information may typically be found on the product packaging or business documentation.                                                                                                                                                           |

| BMS<br>ID | ADB Name        | ADB Business Definition                                                                                                         | Business Process Notes*                                                                     |
|-----------|-----------------|---------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------|
| 135       | Contact Details | The detailed information used to communicate with the contact, such as the telephone number, email address or web site address. | This information may typically be found on the product packaging or business documentation. |

\*Note: Business Process Notes address the primary use case for on-label contact information, however, there could be other use cases such as specific needs around accounting, licensing and regulation.

## 4 Identifiers

Identifier attributes enable accurate identification. They provide uniqueness and promote clarity in identity and differentiation for:

- business entities
- business locations
- products
- classifications

#### 4.1 Identifiers Attributes – Business Process Notes

| BMS<br>ID | ADB Name                                                                                  | ADB Business Definition                                                                                             | Business Process Notes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-----------|-------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 40        | Authorised<br>Receiver of<br>Product<br>Information<br>GLN (Global<br>Location<br>Number) | The Global Location Number (GLN)<br>that uniquely identifies the authorised<br>receiver of the product information. | This is the recipient GLN (e.g., retailer, hospital) to which product<br>information is sent. This is normally supplied by the recipient but might be<br>communicated by their GS1 Member Organisation or data service provider.<br>For more information on obtaining a GLN, please refer to the GS1 General<br>Specifications [https://www.gs1.org/standards/barcodes-epcrfid-id-<br>keys/gs1-general-specifications] and the GS1 GLN Allocation Rules<br>Standard [https://www.gs1.org/standards/gs1-gln-allocation-rules-<br>standard/current-standard]. |

| 67 | GTIN (Global<br>Trade Item<br>Number)                | The global number that uniquely<br>identifies a product and its various<br>packaging levels (e.g. item, case,<br>pallet) physical or non-physical. | This is the identification number, represented in up to 14 digits, allocated to an item or service that is utilised throughout the entire value chain (e.g. purchasing, invoicing, shipping). It shall always be stored in a manner to retain its uniqueness. For more information on GTIN allocation and management, please refer to the GS1 General Specifications [https://www.gs1.org/standards/barcodes-epcrfid-id-keys/gs1-general-specifications] and the GS1 GTIN Management Standard [https://www.gs1.org/1/gtinrules//en/]. |
|----|------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 68 | Additional<br>Product<br>Identification              | An identifier, other than the GTIN,<br>which provides an additional<br>identification for the product.                                             | If these attributes are provided, they should always be used together as a                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 69 | Additional<br>Product<br>Identification<br>Type Code | The code indicating the type of<br>Additional Product Identification used.                                                                         | pair with the <i>GTIN (Global Trade Item Number)</i> , never as a standalone. It provides the ability to create a relationship between different identification systems.                                                                                                                                                                                                                                                                                                                                                              |
| 75 | Brand Owner<br>GLN (Global<br>Location<br>Number)    | The Global Location Number (GLN)<br>that uniquely identifies the Brand<br>Owner of the product.                                                    | This is the GLN of the entity that owns the brand of the product. For more information on obtaining a GLN, please refer to the GS1 General Specifications [https://www.gs1.org/standards/barcodes-epcrfid-id-keys/gs1-general-specifications] and the GS1 GLN Allocation Rules Standard [https://www.gs1.org/standards/gs1-gln-allocation-rules-standard/current-standard].                                                                                                                                                           |
| 77 | Brand Owner<br>Name                                  | The name of the Brand Owner.                                                                                                                       | This is the business entity name that is associated with the <i>Brand Owner GLN</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 83 | Data Provider<br>GLN (Global<br>Location<br>Number)  | The Global Location Number (GLN)<br>used to uniquely identify the party<br>providing the product information.                                      | This is the GLN of the entity that is responsible for providing the master data. For more information on obtaining a GLN, please refer to the GS1 General Specifications [https://www.gs1.org/standards/barcodes-epcrfid-id-keys/gs1-general-specifications] and the GS1 GLN Allocation Rules Standard [https://www.gs1.org/standards/gs1-gln-allocation-rules-standard/current-standard].                                                                                                                                            |

| 85  | Data Provider<br>Name                               | The name of the party providing the product information.                                                                            | This is the business entity name that is associated with the <i>Data Provider GLN</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-----|-----------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 91  | Manufacturing<br>GLN (Global<br>Location<br>Number) | The Global Location Number (GLN)<br>that uniquely identifies the party who<br>owns the manufacturing process of<br>the product.     | This is the GLN of the entity that manufactures the product. For more information on obtaining a GLN, please refer to the GS1 General Specifications [https://www.gs1.org/standards/barcodes-epcrfid-id-keys/gs1-general-specifications] and the GS1 GLN Allocation Rules Standard [https://www.gs1.org/standards/gs1-gln-allocation-rules-standard/current-standard].                                                                                                                                                                                                                                                                                                                                                                                                               |
| 93  | Manufacturer<br>Name                                | The name of the manufacturer.                                                                                                       | This is the business entity name that is associated with the <i>Manufacturing GLN</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 115 | Referenced<br>GTIN Type<br>Code                     | The code indicating the relationship to the referenced GTIN such as substituted or replaced.                                        | If these attributes are provided, they should always be used together as a pair with the <i>GTIN (Global Trade Item Number)</i> , never as a standalone.<br>The <i>Referenced GTIN Type Code</i> is a code value that identifies the                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 116 | Referenced<br>GTIN                                  | The GTIN of a product where a permanent or temporary change to the product needs to be referenced.                                  | <ul> <li>intention for how the product identified by the <i>Referenced GTIN</i> is to be used.</li> <li>The <i>Referenced GTIN</i> may be used to identify a similar, alternative product. A <i>Referenced GTIN</i> may help identify replacement products that can be used, for example, in cases of temporary inventory outages or when transitioning to a new or enhanced product.</li> <li>The <i>Referenced GTIN</i> is subject to the same creation and formatting rules as the <i>GTIN</i>. For more information on GTIN allocation and management, please refer to the GS1 General Specifications [https://www.gs1.org/standards/barcodes-epcrfid-id-keys/gs1-general-specifications] and the GS1 GTIN Management Standard [https://www.gs1.org/1/qtinrules//en/].</li></ul> |
| 161 | Global Product<br>Category Code                     | The code used to group products<br>based on similar characteristics<br>according to the GS1 Global Product<br>Classification (GPC). | This is GS1's primary classification, used globally, outside of business process or other considerations. For more information on GPC, refer to the GS1 GPC web page [https://www.gs1.org/standards/gpc].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

#### 4.2 Notes on GTIN and GLN use in Master Data Exchange

The management of identifiers such as GLNs and GTINs includes rules on allocation, re-use and retirement.

- For more information on GTIN management please refer to the GS1 GTIN Management Standard: [https://www.gs1.org/1/gtinrules//en/].
- For more information on GLN management please refer to the GS1 GLN Allocation Rules Standard: [<u>https://www.gs1.org/standards/gs1-gln-allocation-rules-standard/current-standard]</u>.

GLNs serve different purposes depending on the way an organisation conducts its business. For example, a multi-national manufacturer could have multiple GLNs representing different business applications (e.g. brand, manufacturer, distributor, importer).

- It is necessary to examine the definition of each GLN attribute to determine the appropriate GLN for use in the master data exchange for an item.
- More information on the purposes for which GLNs are used may be found in the GS1 General Specifications [https://www.gs1.org/standards/barcodes-epcrfid-id-keys/gs1-general-specifications].

**Important!** For more information about obtaining GS1 identification numbers (GTINs and GLNs) please refer to the following GS1 web page for Member Organisation contact information: [https://www.gs1.org/contact].

## **5 Descriptions**

The Descriptions group of attributes provides sellers and consumers with information that is useful in identifying and differentiating products. This information may be used in store communications, promotions or e-commerce. The responsibility for populating this information is largely with the manufacturer. The retailer may utilise (and sometimes modify) this information in consumer communications to better align with their marketing strategy. Because there are so many variations in the ways these attributes may be populated, it is recommended that the <u>GS1 Trade Item Implementation Guide</u> be referenced when determining your approach to creating this information.

#### **5.1 Examples of How to Populate Description Attributes**

The following examples provide specific instances of how the description group of attributes may be populated. Please see the GS1 Trade Item Implementation Guide [https://www.gs1.org/standards/gdsn/trade implementation guide], Section 29, for additional examples.

## 5.1.1 Food Example

| Attribute                      | Example Value                                                      |
|--------------------------------|--------------------------------------------------------------------|
| Brand Name                     | Antonio's                                                          |
| Sub Brand Name                 | Extreme                                                            |
| Product Description            | Antonio's Extreme Fried Chicken made with Jumping Joe's 36 oz/1 kg |
| Short Product Name (example 1) | Antonios Extrm Frd Chk Jmp Jos 1k                                  |
| Short Product Name (example 2) | Antonios Extrm Frd Chk Jmp Jos 36oz                                |
| Product Type Description       | Fried Chicken                                                      |

## 5.1.2 Cleanser Example

| Attribute                      | Example Value                                                              |
|--------------------------------|----------------------------------------------------------------------------|
| Brand Name                     | Foodservice                                                                |
| Sub Brand Name (example 1)     | Capblock                                                                   |
| Sub Brand Name (example 2)     | Pot and Pan                                                                |
| Product Description            | Capblock Foodservice Pot and Pan spray cleaning detergent 24 FL OZ / 0.7 L |
| Short Product Name (example 1) | CB FS Pt&Pn spr dtrgnt 24FLOZ/0.7L                                         |
| Short Product Name (example 2) | Capblock FS Pot and Pan spr dtrgnt                                         |
| Product Type Description       | Detergent                                                                  |

| BMS<br>ID | ADB Name                    | ADB Business Definition                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Business Process Notes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-----------|-----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3506      | Short Product<br>Name       | The shortened product name for the consumer product.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | This is typically a very abbreviated form of the <i>Product</i><br><i>Description</i> , with the intention that it would fit in a small space,<br>such as a shelf tag or receipt. This is typically not used in e-<br>commerce. The abbreviations used by the seller should be<br>consistent across all the seller's products and ideally be<br>recognizable to the consumer. (Note that there is currently no<br>standardised abbreviation list.) In some instances, this could<br>include the full brand name. Product variations (e.g. flavour,<br>scent, etc.) and bundled variations need to be uniquely<br>identified. Net content may not be included in some markets. |
| 3508      | Product Type<br>Description | The generic description provided by the seller to describe the type, form or function of the product or service.                                                                                                                                                                                                                                                                                                                                                                                                                                     | This does not include information such as brand, net content, colour, flavour, scent, etc. For example for <i>Product Description</i> "GS1 Brand Hair Colour Liquid Light to Medium Blonde 32 fl oz.", <i>Product Type Description</i> could be "hair colour".                                                                                                                                                                                                                                                                                                                                                                                                                |
| 3517      | Product<br>Description      | An understandable and useable description of a<br>product using a combination of key elements such<br>as Brand Name, Sub-Brand (if applicable),<br>Functional Name, Variant, and Net Content. The<br>description should be unique and meaningful for<br>the Retailers to manage the product through their<br>business and describe the product to their<br>consumers e.g. Brand, flavour, scent etc.<br>Examples: • GS1 Brand Base Invisible Solid<br>Deodorant AP Stick Spring Breeze 3.4oz • GS1<br>Brand Laundry Detergent Liquid Compact Regular | The <i>Product Description</i> at the consumer unit level may be<br>used by some recipients and manufacturers across all hierarchy<br>levels. The text may need to be modified to adhere to the<br>character limit restricted by your technical implementation.<br>Note that the "elements" described in the definition are<br>business elements as determined by the manufacturer and do<br>not necessarily reflect attribute values.                                                                                                                                                                                                                                        |

## **5.2 Descriptions Attributes – Business Process Notes**

|      |                | Instant Stain Unscented 100 mL • GS1 Brand Hair Colour Liquid Light to Medium Blonde 32 fl oz.                              |                                                                                                                                                                                                      |
|------|----------------|-----------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3541 | Brand Name     | The name provided by the brand owner that is intended to be recognised by the consumer as represented on the product.       | In addition to being found on the product, these names may be<br>found on web sites and for other e-commerce uses. <i>Brand</i><br><i>Name</i> and <i>Sub Brand Name</i> are determined by the brand |
| 3546 | Sub Brand Name | The name provided by the brand owner that allows<br>the consumer to further differentiate the product<br>beyond brand name. | owner. For detailed guidance on assigning these attributes,<br>refer to the GS1 Trade Item Implementation Guide<br>[https://www.gs1.org/standards/gdsn/trade implementation g<br>uide].              |

# **6 Contents, Weights and Dimensions**

The contents, weights and dimensions attributes provide a means of expressing the physical characteristics of products at all packaging levels, from individual products to pallets and logistic units. They support informed management of the physical products as they move through the supply chain and may be used to provide additional product information to consumers. More information can be found in the GS1 Package and Product Measurement Standard (https://www.gs1.org/standards/gs1-package-and-product-measurement-standard/current-standard).

#### 6.1 Measurement Examples

#### 6.1.1 Measurement Example for GTIN Pallets

**Note**: Refer to the **Trade Item Hierarchy** section of this document for additional attributes related to the packaging hierarchy level of a product.

| Hierarchy Level      | LOWER -              |                       |                | → HIGHER       |
|----------------------|----------------------|-----------------------|----------------|----------------|
| Packaging Level Code | Base Unit<br>or Each | Pack or<br>Inner Pack | Case           | Pallet         |
|                      |                      |                       |                |                |
| GTIN                 | GTIN A               | GTIN B                | GTIN C         | GTIN D         |
| Attribute            | GTIN A               | GTIN B                | GTIN C         | GTIN D         |
| Depth/Length*        | 24 Centimetre        | 25.5 Centimetre       | 27 Centimetre  | 102 Centimetre |
| Height*              | 24 Centimetre        | 100 Centimetre        | 104 Centimetre | 225 Centimetre |
| Width*               | 24 Centimetre        | 25.5 Centimetre       | 53 Centimetre  | 122 Centimetre |
| Gross Weight*        | 0.625 Kilogram       | 2.8 Kilogram          | 7.5 Kilogram   | 47 Kilogram    |

\***Note**: These attributes will always be accompanied by a measurement unit code (e.g. "Kilogram", "Centimetre"). Attributes may be repeated per target market to provide metric or imperial measures.

#### 6.1.2 Measurement Example for Non-GTIN Pallets

**Note**: Refer to the **Trade Item Hierarchy** section of this document for additional attributes related to the packaging hierarchy level of a product.

When the pallet does not have a GTIN, the non-GTIN measurement attributes are provided at the highest packaging level below the pallet, in this example the case.

| Hierarchy Level      | LOWER -              |                       |                |    | HIGHER             |
|----------------------|----------------------|-----------------------|----------------|----|--------------------|
| Packaging Level Code | Base Unit<br>or Each | Pack or<br>Inner Pack | Case           |    | Pallet             |
| GTIN                 | GTIN A               | GTIN B                | GTIN C         | (1 | No GTIN Assigned)  |
| Attribute            | GTIN A               | GTIN B                | GTIN C         |    | (No GTIN – Pallet) |
| Depth/Length*        | 24 Centimetre        | 25.5 Centimetre       | 27 Centimetre  |    |                    |
| Height*              | 24 Centimetre        | 100 Centimetre        | 104 Centimetre |    |                    |
| Width*               | 24 Centimetre        | 25.5 Centimetre       | 53 Centimetre  |    |                    |
| Gross Weight*        | 0.625 Kilogram       | 2.8 Kilogram          | 7.5 Kilogram   |    |                    |

Height\*

Non-GTIN Logistic Unit

Non-GTIN Logistic Unit

Depth/Length\*

102 Centimetre

225 Centimetre

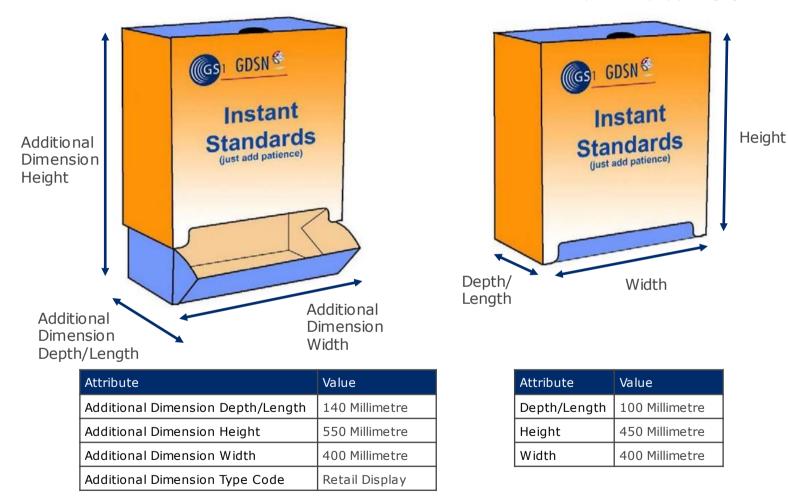

| Non-GTIN Logistic Unit<br>Width*        |  | 122 Centimetre |  |
|-----------------------------------------|--|----------------|--|
| Non-GTIN Logistic Unit<br>Gross Weight* |  | 47 Kilogram    |  |

\*Note: These attributes will always be accompanied by a measurement unit code (e.g. "Kilogram", "Centimetre"). Attributes may be repeated per target market to provide metric or imperial measures.

#### 6.1.3 Measurement Example for Display Ready Packaging

The Additional Dimension attributes are used to describe the measurements of the "opened" display packaging.

#### 6.2 Net Content and Net Content Statement Examples

#### 6.2.1 Ice Cream Bars

# Net Content (repeatable):

- 18 fl oz
- 532 ml
- 6 [piece or count]\*

\*Use of the measurement terms "piece" or "count" may be interchangeable, depending on product, regior and language, at the discretion of the product owner.

Net Content Statement: 6x3.0 fl oz BARS (18 fl oz) (532 ml)

#### 6.2.2 Yogurt

# *Net Content* (repeatable):

- 9.1 lb
- 4.08 kg
- 24 [piece or count]\*

\* Use of the measurement terms "piece" or "count" may be interchangeable, depending on product, region and language, at the discretion of the product owner.

# Net Content Statement: 24-60Z(170g) SERVINGS 9.1Lb (4.08kg)

**Note:** servings information is also described in the **Nutritional Facts** section in this document

#### 6.2.3 Toilet Paper

P ROLLS/ROLLOS • BATHROOM TISSUE/PAPEL HIGIÉNICO 25 SQ FT/PIES CUADRADOS (20.9m<sup>3</sup>) • 200 2-PLY SHEETS PER ROLLJ HJAS DOBLES POR ROLLO • 11.4 cm X 10.1 cm (4.5 IN/PLG X 4.0 IN/PLG)

# Net Content (repeatable):

- 225 sq ft
- 20.9 sq m
- 1800 sheet
- 9 [piece or count]\*

\* Use of the measurement terms "piece" or "count" may be interchangeable, depending on product, region and language, at the discretion of the product owner.

Net Content Statement (English): 9 ROLLS BATHROOM TISSUE 225 SQ FT (20.9m<sup>2</sup>) 200 2-PLY SHEETS PER ROLL 11.4 cm X 10.1 cm (4.5 IN/PLG X 4.0 IN/PLG)

Net Content Statement (Spanish):

9 ROLLOS PAPEL HIGIÉNICO 225 PIES CUADRADOS (20.9m<sup>2</sup>) 200 HOJAS DOBLES POR ROLLO 11.4 cm X 10.1 cm (4.5 IN/PLG X 4.0 IN/PLG)

**Note**: inclusion of special characters (such as the superscript "2" in "m $^{2"}$ ) may be impacted by the capabilities of the technical exchange solution.

#### 6.2.4 Shampoo Two-Pack

This example represents the package, containing two identical bottles of shampoo, as a consumer unit.

# Net Content (repeatable):

- 80 FL OZ
- 2.5 QT
- 2.36 L
- [1 or 2] [piece or count]\*

\*Use of the measurement terms "piece" or "count" may be interchangeable, depending on product, region and language, at the discretion of the product owner. The designation of 1 vs 2 piece/count for this type of homogeneous package may differ by regulation and target market.

*Net Content Statement*: 2-40 FL.OZ. (1QT., 8 FL.OZ.) 1.18L

**Note:** when multiple identical products are packaged together, the *Net Content* is frequently used by consumers to compare pricing per measurement of this grouped package vs individual items.

#### 6.2.5 Shampoo and Conditioner Mixed Package

This example represents the package, containing a bottle of shampoo and a bottle of conditioner, as a consumer unit.

# Net Content (repeatable):

• 1 [piece or count]\*

\*Use of the measurement terms "piece" or "count" may be interchangeable, depending on product, region and language, at the discretion of the product owner.

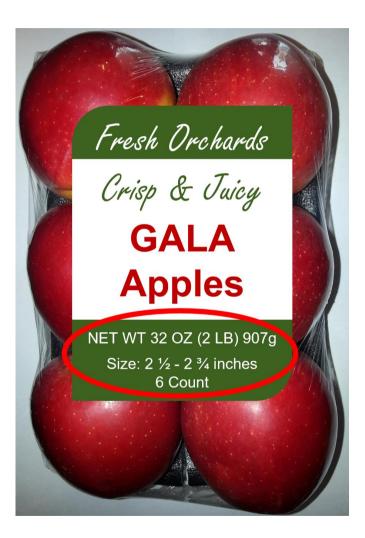

# Net Content Statement:

1-40 FL.OZ. (1QT., 8 FL.OZ.) 1.18L SHAMPOO and 1-40 FL.OZ. (1QT., 8 FL.OZ.) 1.18L CONDITIONER

**Note:** when two or more different items are packaged together, the individual *Net Content* attributes cannot adequately describe the content of the combined items. *Net Content Statement* is needed to fully describe the individual content values for each packaged item.

#### 6.2.6 Package of Apples

# Net Content (repeatable):

- 32 oz
- 907g
- 6 [piece or count]\*

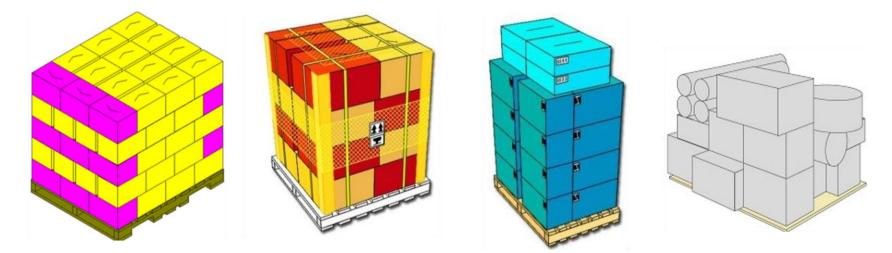

\*Use of the measurement terms "piece" or "count" may be interchangeable, depending on product, region and language, at the discretion of the product owner.

# *Net Content Statement*: 32 OZ (2 LB) 907g 6 Count

**Note:** For fruits and vegetables, size information is specified in the attribute *Size Description*, and NOT in *Net Content Statement*.

# 6.3 Regular/Irregular Pallet Configuration/Layout Examples

| Irregularly Configured Pallet Indicator* attribute value |       |      |      |  |
|----------------------------------------------------------|-------|------|------|--|
| False                                                    | False | True | True |  |

**\*Note:** this attribute reflects the arrangement of products on a pallet, not how pallets are stacked on top of each other.

# 6.4 Contents, Weights and Dimensions Attributes – Business Process Notes

| BMS<br>ID | ADB Name                                  | ADB Business Definition                                                                                                                                                                                                                                                                                  | Business Process Notes                                                                                                                                                                                              |
|-----------|-------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3721      | Depth/Length                              | The depth or length measurement, with its unit of measure, of the item (such as product, case, pallet) according to the GS1 Package and Product Measurement Standard (https://www.gs1.org/standards/gs1-package-and-product-measurement-standard/current-standard).                                      |                                                                                                                                                                                                                     |
| 3725      | Height                                    | The vertical measurement, with its unit of measure, of the item (such as product, case, pallet) according to the GS1 Package and Product Measurement Standard ( <u>https://www.gs1.org/standards/gs1-package-and-product-measurement-standard/current-standard</u> ).                                    | Prior to measuring, users should understand how dimensions relate to a specific product, e.g. candy bar vs. laundry detergent.                                                                                      |
| 3739      | Width                                     | The horizontal measurement, with its unit of measure, of<br>the item (such as product, case, pallet) according to the<br>GS1 Package and Product Measurement Standard<br>(https://www.gs1.org/standards/gs1-package-and-<br>product-measurement-standard/current-standard).                              | Prior to measuring, users should understand how dimensions relate to a specific product, e.g. candy bar vs. laundry detergent.                                                                                      |
| 3777      | Gross Weight                              | The total weight of the product including the weight of all its packaging materials.                                                                                                                                                                                                                     | [no additional notes]                                                                                                                                                                                               |
| 1664      | Non-GTIN<br>Logistic Unit<br>Depth/Length | A logistic unit not identified with a GTIN, the depth or<br>length measurement (with its unit of measure) of the<br>logistic unit according to the GS1 Package and Product<br>Measurement Standard<br>(https://www.gs1.org/standards/gs1-package-and-<br>product-measurement-standard/current-standard). | Only specified at the highest level where the level above (i.e.<br>parent level) has no GTIN. Typically assigned at the case level,<br>where there is a pallet level, but the pallet level does not have a<br>GTIN. |
| 1668      | Non-GTIN<br>Logistic Unit<br>Height       | A logistic unit not identified with a GTIN, the vertical measurement (with its unit of measure) of the logistic unit according to the GS1 Package and Product Measurement Standard ( <u>https://www.gs1.org/standards/gs1-package-and-product-measurement-standard/current-standard</u> ).               | Only specified at the highest level where the level above (i.e.<br>parent level) has no GTIN. Typically assigned at the case level,<br>where there is a pallet level, but the pallet level does not have a<br>GTIN. |

| BMS<br>ID | ADB Name                                  | ADB Business Definition                                                                                                                                                                                                                                                                                                             | Business Process Notes                                                                                                                                                                                                                                                                     |
|-----------|-------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1671      | Non-GTIN<br>Logistic Unit<br>Width        | A logistic unit not identified with a GTIN, the horizontal measurement with the unit of measure of the logistic unit according to the GS1 Package and Product Measurement Standard ( <u>https://www.gs1.org/standards/gs1-package-and-product-measurement-standard/current-standard</u> ).                                          | Only specified at the highest level where the level above (i.e.<br>parent level) has no GTIN. Typically assigned at the case level,<br>where there is a pallet level, but the pallet level does not have a<br>GTIN.                                                                        |
| 1666      | Non-GTIN<br>Logistic Unit<br>Gross Weight | A logistic unit not identified with a GTIN, the total weight<br>(with its unit of measure) of the product including the<br>weight of all its packaging materials.                                                                                                                                                                   | Only specified at the highest level where the level above (i.e.<br>parent level) has no GTIN. Typically assigned at the case level,<br>where there is a pallet level, but the pallet level does not have a<br>GTIN.                                                                        |
| 3759      | Additional<br>Dimension<br>Depth/Length   | The depth or length measurement of the dimensions of the physical form of the product in or out of packaging, including its unit of measure, which may be in accordance with the GS1 Package and Product Measurement Standard (https://www.gs1.org/standards/gs1-package-and-product-measurement-standard/current-standard).        | This measurement relates to a specific Additional Dimension Type Code. This attribute shall not be used in place of Depth/Length. Prior to measuring, users should understand how dimensions relate to a specific product (e.g. retail display, tea towel, electric toothbrush).           |
| 3761      | Additional<br>Dimension<br>Type Code      | The code that describes additional dimensions of the physical form of the product in or out of packaging. May be related to retail display.                                                                                                                                                                                         | This code is used in conjunction with <i>Additional Dimension Depth/Length</i> , <i>Additional Dimension Width</i> and <i>Additional Dimension Height</i> . Refer to the business process notes for these measurements.                                                                    |
| 3762      | Additional<br>Dimension<br>Height         | The height measurement of the dimensions of the physical<br>form of the product in or out of packaging, including its<br>unit of measure, which may be in accordance with the GS1<br>Package and Product Measurement Standard<br>(https://www.gs1.org/standards/gs1-package-and-<br>product-measurement-standard/current-standard). | This measurement relates to a specific <i>Additional Dimension Type Code</i> . This attribute shall not be used in place of <i>Height</i> . Prior to measuring, users should understand how dimensions relate to a specific product (e.g. retail display, tea towel, electric toothbrush). |
| 3764      | Additional<br>Dimension<br>Width          | The width measurement of the dimensions of the physical<br>form of the product in or out of packaging, including its<br>unit of measure, which may be in accordance with the GS1<br>Package and Product Measurement Standard<br>(https://www.gs1.org/standards/gs1-package-and-<br>product-measurement-standard/current-standard).  | This measurement relates to a specific Additional Dimension Type<br>Code. This attribute shall not be used in place of Width. Prior to<br>measuring, users should understand how dimensions relate to a<br>specific product (e.g. retail display, tea towel, electric<br>toothbrush).      |

| BMS<br>ID | ADB Name                                    | ADB Business Definition                                                                                                                                                                 | Business Process Notes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-----------|---------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3733      | Net Content                                 | The quantity (or quantities) of the product contained in the package along with its unit of measure typically printed on the label for the country or market where the product is sold. | This is a measurement, including a number and its unit of measure, and they can be repeated as a pair.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 3741      | Net Content<br>Statement                    | The literal reproduction of the net content(s) as displayed on the product packaging.                                                                                                   | This is a text string that includes the full statement as it appears on a package. It is used when net content cannot be fully expressed as just a number and a unit of measure. For multi-packs this is to specify the net content per single pack and the count of single packs. <i>Net Content Statement</i> should NOT be used to describe the size of fruits and vegetables (which is done using the attribute <i>Size Description</i> (BMS ID 3800)).<br>May be repeated once for each language. In cases where languages are intertwined on the package, they may be separated in the individual language instances of the attribute. |
| 3775      | Drained<br>Weight                           | The weight of the product when drained of its liquid as stated on the product label.                                                                                                    | [no additional notes]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 3779      | Net Weight                                  | The weight of the product excluding the weight of all its packaging materials.                                                                                                          | It is important to note the difference between <i>Net Weight</i> and <i>Net</i><br><i>Content. Net Weight</i> may be used in situations where information<br>cannot be adequately represented in <i>Net Content</i> , as well as in<br>instances where there is no declared weight on the package.                                                                                                                                                                                                                                                                                                                                           |
| 3804      | Product<br>Temperature<br>Condition<br>Code | The code used to identify the state of the product when purchased by the consumer.                                                                                                      | The product may be received by the buyer in a condition that is<br>different from the condition when it is purchased by the<br>consumer. If the product packaging (label) contains the state of<br>the product when purchased by the consumer, then this attribute<br>is mandatory. This attribute is not needed if this information is<br>not stated on the packaging (in which case the buyer can<br>determine the condition at point of sale).                                                                                                                                                                                            |
| 3820      | Maximum<br>Temperature                      | The maximum temperature that a product can not exceed during an activity as defined by the manufacturer without affecting product safety, quality and/or usage.                         | [no additional notes]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

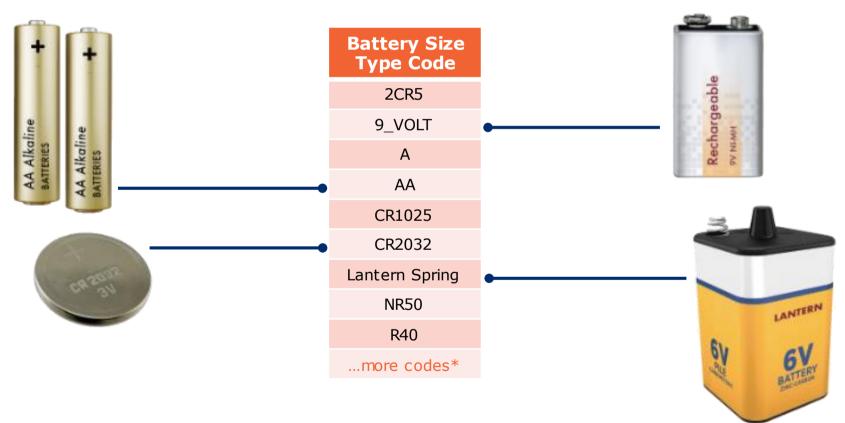

| BMS<br>ID | ADB Name                                         | ADB Business Definition                                                                                                                                                                               | Business Process Notes                                                                                                                                                                                                                                                                                                                           |
|-----------|--------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3826      | Minimum<br>Temperature                           | The minimum temperature that a product can not go below during an activity as defined by the manufacturer without affecting product safety, quality and/or usage.                                     | [no additional notes]                                                                                                                                                                                                                                                                                                                            |
| 3830      | Temperature<br>Activity Code                     | The code that indicates the activity for which the maximum and minimum temperatures are applicable.                                                                                                   | [no additional notes]                                                                                                                                                                                                                                                                                                                            |
| 3604      | Stacking<br>Factor                               | The maximum number of levels for a specific unit that can<br>exist in a stack without impacting the quality of the<br>product. A value of 1 means that the item cannot be<br>stacked.                 | A value of 1 indicates the item is not stackable. A value of 2 would indicate that the item can be stacked 2 high, etc.                                                                                                                                                                                                                          |
| 3607      | Stacking<br>Factor Type<br>Code                  | The code that indicates the storage or type of transportation to which the Stacking Factor applies.                                                                                                   | This attribute is used in conjunction with <i>Stacking Factor.</i>                                                                                                                                                                                                                                                                               |
| 3611      | Irregularly<br>Configured<br>Pallet<br>Indicator | The indicator specifying that a pallet does not have a consistent configuration of items across layers.                                                                                               | If this indicator is "True", the value in <i>Total Count of All</i><br><i>Products</i> (BMS ID 200) cannot be calculated by multiplying<br>the <i>Number of Units per Layer in a GTIN</i> (BMS ID 3618) by<br>the <i>Number of Layers per GTIN</i> (BMS ID 3614) but should be<br>populated with the actual <i>Total Count of All Products</i> . |
| 1670      | Stacking<br>Factor for<br>non-GTIN<br>Pallet     | The maximum number of levels for a specific unit not identified by a GTIN that can exist in a stack without impacting the quality of the product. A value of 1 means that the item cannot be stacked. | A value of 1 indicates the item is not stackable. A value of 2 would indicate that the item can be stacked 2 high, etc.                                                                                                                                                                                                                          |

# 7 Marketing & Consumer Facing

The marketing and consumer facing attributes provide information about a product that are intended to inform or influence the consumer in their purchasing decision. They may shape the consumer's expectation about how the product will perform, how or when to best experience it or for whom the product is best suited.

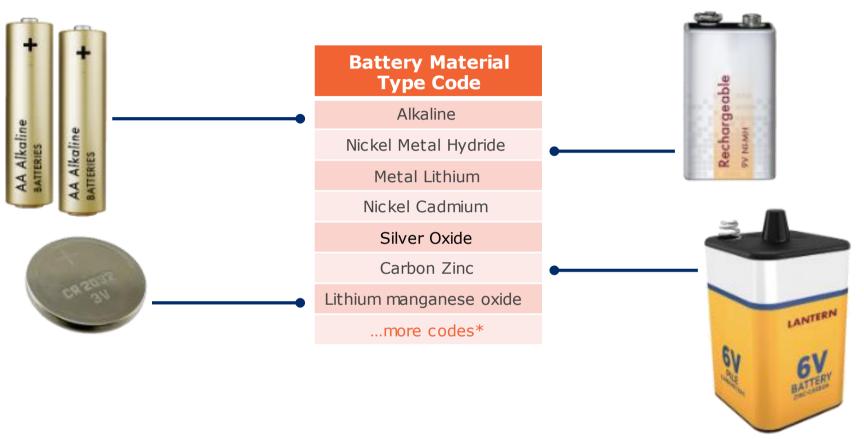

#### 7.1 Battery Size Type Code Examples

\*Please refer to the <u>GS1 Global Data Dictionary</u> for the full list of Battery Size Type Codes. Note that the GS1 GDD attribute name is *BatteryTypeCode*.

\*Please refer to the <u>GS1 Global Data Dictionary</u> for the full list of Battery Material Type Codes. Note that the GS1 GDD attribute name is *BatteryTechnologyTypeCode*.

#### 7.3 **Preparation Type Code / Preparation Instructions Example (Frozen Pizza)**

### MICROWAVE COOKING INSTRUCTIONS (1100 WATTS)

NOTE: ONLY COOK 1 TRAY AT A TIME.

- Remove pizza from carton, remove overwrap from tray and pizza.
- 2 Place frozen pizza directly on the silver cooking surface, and then place on a microwave-safe plate.
- Cook on high (100% power) for 2 to 3 minutes.Product is ready when cheese is completely melted. Carefully remove product from the microwave and let cool for 1 minute before serving.

## CONVENTIONAL OVEN COOKING INSTRUCTIONS

| 1                                                                            | 0                                                                                                                                     | 3                                                                                                              | 4                                                                                                                                         |
|------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------|
| Preheat<br>oven to<br>375°F.<br>Place oven<br>rack in<br>centre<br>position. | Remove pizza<br>from clear<br>plastic wrap.<br>Discard plastic<br>and silver cooking<br>tray. CAUTION:<br>Do not use tray<br>in oven. | When oven is<br>preheated, place<br>frozen pizza on a<br>cookie sheet and<br>then place on the<br>centre rack. | Bake for 21-24<br>minutes or until<br>cheese is melted<br>and lightly<br>browned. Let<br>pizza cool for<br>2-3 minutes<br>before serving. |

| Preparation Type Code | Preparation Instructions                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Microwave             | Microwave cooking instructions (1100 watts). Note: Only Cook 1 tray at a time. 1) Remove pizza from carton, remove overwrap from tray and pizza. 2) Place frozen pizza directly on the silver cooking surface, and then place on a microwave-safe plate. 3) Cook on high (100% power) for 2 to 3 minutes. Product is ready when cheese is completely melted. Carefully remove product from the microwave and let cool for 1 minute before serving.   |
| Bake                  | Conventional oven cooking instructions. 1) Preheat oven to 375°F. Place oven rack in centre position. 2) Remove pizza from clear plastic wrap. Discard plastic and silver cooking tray. CAUTION: Do not use tray in oven. 3) When oven is preheated, place frozen pizza on a cookie sheet and then place on the centre rack. 4) Bake for 21-24 minutes or until cheese is melted and lightly browned. Let pizza cool for 2-3 minutes before serving. |

## 7.4 Preparation Type Code / Preparation Instructions Example (Vegetable Fried Rice)

# **COOKING INSTRUCTIONS**

#### STOVE TOP:

- **1.** Heat approximately 1 tablespoon of vegetable oil in a non-stick frying pan or wok.
- 2. Pour 1-1/2 cups of contents into pan.

#### MICROWAVE:

**1.** Microwave: Add 1-1/2 cups of frozen Vegetable Fried Rice in microwaveable container, cover, and cook on HIGH for 2 minutes or until cooked thoroughly to 165°F.

| Preparation Type Code | Preparation Instructions                                                                                                                                                                                                              |  |
|-----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| Saute                 | Stove Top: 1) Heat approximately 1 tablespoon of vegetable oil in a non-stick frying pan or wok. 2) Pour 1-1/2 cups of contents into pan. 3) Cook on MEDIUM, stirring continuously for 5 minutes or until cooked thoroughly to 165°F. |  |
| Microwave             | Microwave: Add 1-1/2 cups of frozen Vegetable Fried Rice in microwaveable container, cover, and cook on HIGH for 2 minutes or until cooked thoroughly to 165°F.                                                                       |  |

# 7.7 Marketing and Consumer Facing Attributes – Business Process Notes

| BMS<br>ID | ADB Name                        | ADB Business Definition                                                                                                               | Business Process Notes                                                                                                                                                                                                                                        |
|-----------|---------------------------------|---------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 600       | Batteries Included<br>Indicator | The indicator specifying whether batteries are included with the product.                                                             | If this attribute is True, related battery attributes are required.                                                                                                                                                                                           |
| 601       | Batteries Required<br>Indicator | The indicator specifying whether batteries are required to operate the product, including built in batteries and removable batteries. | If this attribute is True, related battery attributes are required.                                                                                                                                                                                           |
| 612       | Batteries Built In<br>Indicator | The indicator specifying whether batteries are built into the product.                                                                | If this attribute is True, related battery attributes are required.                                                                                                                                                                                           |
| 613       | Battery Material<br>Type Code   | The code which indicates the material of the battery.                                                                                 | This attribute describes the active material in the battery (e.g. lithium ion, nickel cadmium, alkaline). This attribute is required if the <i>Batteries Required Indicator, Batteries Included Indicator</i> or <i>Batteries Built In Indicator</i> is True. |
| 614       | Battery Size Type<br>Code       | The code which indicates the physical size/shape of the battery used to operate the product.                                          | This attribute is required if the <i>Batteries Required Indicator, Batteries Included Indicator</i> or <i>Batteries Built In Indicator</i> is True.                                                                                                           |
| 615       | Battery Weight                  | The weight of one battery included with or built into the product.                                                                    | This attribute is required if the <i>Batteries Built In Indicator</i> or the <i>Batteries Included Indicator</i> is True. This is typically used to determine disposal requirements.                                                                          |
| 617       | Number of Batteries<br>Built In | The number of batteries built into the product.                                                                                       | This attribute is required if the <i>Batteries Built In Indicator</i> is True.                                                                                                                                                                                |
| 618       | Number of Batteries<br>Required | The number of batteries required to operate the product.                                                                              | This attribute is required if the <i>Batteries Required Indicator</i> is True.                                                                                                                                                                                |

| BMS<br>ID | ADB Name                         | ADB Business Definition                                                                         | Business Process Notes                                                                                                                                                                                                                                                                                                                                                            |

| 789       | Consumer Storage<br>Instructions | The instructions and information provided to the consumer about proper storage for the product. | [no additional notes]                                                                                                                                                                                                                                                                                                                                                             |
| 791       | Consumer Usage<br>Instructions   | The instructions and information provided to the consumer on the usage of the product.          | [no additional notes]                                                                                                                                                                                                                                                                                                                                                             |
| 1066      | Dietary Regime Code              | The code indicating the diet the product is suitable for.                                       | Some examples of <i>Dietary Regime Code</i> include: Halal, Keto, Low Carb and Vegan.                                                                                                                                                                                                                                                                                             |
|           |                                  |                                                                                                 | The full range of dietary codes may be found in the <u>GS1 Global</u><br><u>Data Dictionary</u> .                                                                                                                                                                                                                                                                                 |
| 1377      | Preparation<br>Instructions      | The instructions on how to prepare the product for consumption.                                 | This attribute is required if the packaging includes instruction on<br>how to prepare the product. It may also be an instruction<br>associated with the <i>Preparation Type Code</i> and may be repeated<br>as a group for each preparation type (e.g. bake, boil,<br>microwave). Preparation type should be included in the text of<br>the instructions if it is on the package. |
| 1379      | Preparation Type<br>Code         | The code specifying the method used to make the product ready for consumption.                  | This attribute is required if the product needs to be prepared by the consumer before consumption. It may also be associated with <i>Preparation Instructions</i> and <i>Serving Suggestion</i> .                                                                                                                                                                                 |
| 1380      | Serving Suggestion               | A suggestion about the way the product may<br>be served to enhance the consumer<br>experience.  | This value is typically a marketing statement describing when or<br>how the product may be enjoyed, often represented with an<br>image on the packaging. (Examples: "Serve with fruits and<br>vegetables for a well-balanced meal!", "Great for Breakfast,<br>Lunch or Dinner!")                                                                                                  |
| 1494      | Features and<br>Benefits         | The description of features and benefits of the individual product, service, brand or seller.   | This short list of key features or benefits of the product is<br>intended to be displayed as a bullet list. The attribute is<br>repeated for each feature. Bullets are not included in the<br>attribute content, as it will be formatted into a list for<br>presentation to the consumer.                                                                                         |

| BMS<br>ID | ADB Name                          | ADB Business Definition                                                                                                              | Business Process Notes                                                                                                                                                                                                                                                                                                                                                                  |
|-----------|-----------------------------------|--------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1498      | Product Marketing<br>Message      | The description of the product experience for the consumer.                                                                          | One or more understandable, usable paragraphs that describe<br>the product, designed to entice the consumer to purchase. In<br>some regions this may be referred to as "romance language" or<br>"romance copy". The attribute may be repeated if more space is<br>needed to continue the message.                                                                                       |
| 1506      | Product Grade                     | The description of the product's evaluation or ranking or class, such as quality, size, weight.                                      | [no additional notes]                                                                                                                                                                                                                                                                                                                                                                   |
| 1530      | Search Key Words for Product      | The key words provided by the seller intended<br>to help make the product discoverable by<br>consumers using digital search engines. | These are the words, phrases or tags that consumers will use in search engines to find the product.                                                                                                                                                                                                                                                                                     |
| 1550      | Seasonal Product<br>Indicator     | The indicator that specifies whether the product is seasonal or offered during specific times of the year.                           | [no additional notes]                                                                                                                                                                                                                                                                                                                                                                   |
| 1558      | Target Consumer<br>Age            | The description of the intended age or age range of the consumer.                                                                    | This is generated by the supplier and generally matches what is<br>on the packaging artwork. Retailers may transform this<br>description to match the terminology they wish to use to<br>communicate with their consumers. For example, a supplier may<br>designate a toy to be targeted for ages 1 to 3 years, while a<br>retailer may want to state the age range as 12 to 36 months. |
| 3531      | Product Shape Code                | The code representing the shape of the product, excluding the packaging.                                                             | [no additional notes]                                                                                                                                                                                                                                                                                                                                                                   |
| 3552      | Alternative Colour<br>Description | The description of the colour of the product.                                                                                        | This is the name provided by the supplier to describe the colour<br>and could be enhanced with marketing language (for example<br>"Flamingo Pink" vs "Pink").                                                                                                                                                                                                                           |
| 3587      | Product Handling<br>Code          | The code that defines the information and processes needed to safely handle the product.                                             | [no additional notes]                                                                                                                                                                                                                                                                                                                                                                   |

| BMS<br>ID | ADB Name                                         | ADB Business Definition                                                                                                                                                            | Business Process Notes                                                                                                                                                                                                                                                                       |
|-----------|--------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3703      | Minimum Days of<br>Shelf Life at Arrival         | The seller's determination of the minimum<br>number of calendar days of shelf life of the<br>product, based upon the expiration date on the<br>product, upon receipt by the buyer. | This value is provided by the seller. It is allowed to vary by buyer and "arrival" should be based on the agreed-upon point in the distribution chain (e.g. dock door or warehouse gate).                                                                                                    |
| 3704      | Minimum Days of<br>Shelf Life from<br>Production | The seller's determination of the minimum number of calendar days from the production date to the expiration date.                                                                 | This value is provided by the seller. It is allowed to vary by buyer.                                                                                                                                                                                                                        |
| 3709      | Usage Period After<br>Opening                    | The period after opening where the product is still safe to be used by the consumer.                                                                                               | The value for individual products is stated on label. In the case of a variety/multi pack where products within the package are individually labelled with different values of the <i>Usage Period After Opening</i> , best practice is to populate this attribute with the shortest period. |
| 3800      | Size Description                                 | A description of the size of the product.                                                                                                                                          | This is descriptive terminology for the size of the product rather than a numeric size, for example "small", "medium" and "large", or ".5 L 12-count". It should not be confused with <i>Net Content</i> . This attribute is a description, not a measurement.                               |
| 5891      | Brand Marketing<br>Message                       | The description of the consumer experience with the product brand.                                                                                                                 | One or more understandable, usable paragraphs that describe<br>the brand experience, designed to entice the consumer to<br>purchase. This may be used to influence the feeling the<br>consumer has about a brand.                                                                            |

# 8 Packaging

This section provides guidance on the set of attributes used to convey information about the make-up of product packaging, such as the packaging form, material and features. This information is specified for all levels of the product packaging hierarchy, e.g. each, inner pack, case and pallet. The goal is to provide an understanding of how these attributes may be populated at various levels, and how the attributes are related and used together.

## 8.1 Packaging Examples – Each Level

8.1.1 Net Bag

"Net" is populated at the each level.

| Packaging Type Code | Packaging Material Type Code | Packaging Feature Code |
|---------------------|------------------------------|------------------------|
| Net                 | Plastic Other                | Handles                |

#### 8.1.2 Cereal Box

"Box" and "Bag" are populated at the each level.

| Packaging Type Code | Packaging Material Type Code     | Packaging Feature Code |
|---------------------|----------------------------------|------------------------|
| Box                 | Paperboard                       |                        |
| Bag                 | High Density Polyethylene (HDPE) |                        |

## 8.2 Packaging Example – Inner Pack Level

"Multipack" is populated at the inner pack level.

| Packaging Type Code  | Packaging Material Type Code | Packaging Feature Code |
|----------------------|------------------------------|------------------------|
| Multipack            | Paperboard                   | Handles                |
| *Bottle              | Coloured Glass               |                        |
| *Packed, unspecified | Metal                        | Twist Cap              |

\* "Bottle" and "Twist Cap" are populated at the each level.

## 8.3 Packaging Example – Case Level

"Box" is populated at the case level.

| Packaging Type Code | Packaging Material Type Code | Packaging Feature Code |
|---------------------|------------------------------|------------------------|
| Box                 | Double Wall Corrugated Board | Internal Dividers      |

## 8.4 Packaging Example – Pallet Level

"Pallet" is populated at the pallet level.

| Packaging Type Code | Packaging Material Type Code    | Packaging Feature Code |
|---------------------|---------------------------------|------------------------|
| Pallet              | Hardwood                        |                        |
| Banded package      | Polypropylene (PP)              |                        |
| Stretchwrapped      | Linear Low Density Polyethylene |                        |

Note: Pallet Type Code (BMS ID 2181) is populated at this level, e.g. "Pallet 1200 X 1000 mm".

# 8.5 Packaging Attributes – Business Process Notes

| BMS<br>ID | ADB Name                        | ADB Business Definition                                           | Business Process Notes                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-----------|---------------------------------|-------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2186      | Packaging Type<br>Code          | The code for the type of package or container of the product.     | The <i>Packaging Type Code</i> and <i>Pallet Type Code</i> may be represented individually or as a unique combination of the two. The detailed packaging information (e.g. BMS IDs 2166, 2180, 2206, 2261, 2263), if used, is related to each unique instance or combination of <i>Packaging Type Code</i> and <i>Pallet Type Code</i> . If there are multiple packaging types the order in which they are communicated may make a difference, dependent on local requirements. |
| 2166      | Package Feature<br>Code         | The code that describes features about the packaging of the item. | The <i>Package Feature Code</i> may be repeated for each instance of <i>Packaging Type Code / Pallet Type Code</i> .                                                                                                                                                                                                                                                                                                                                                            |
| 2206      | Packaging Material<br>Type Code | The code for the type of packaging material of the product.       | The <i>Packaging Material Type Code</i> may be repeated for each instance of <i>Packaging Type Code / Pallet Type Code</i> .<br>In some markets this attribute may be related to other sustainability-related material attributes and may be specified by local regulation.                                                                                                                                                                                                     |
| 2261      | Package Deposit<br>Amount       | The amount of deposit associated with a returnable package.       | This amount must be accompanied with a currency type in this or another field, depending upon your master data exchange solution.                                                                                                                                                                                                                                                                                                                                               |
| 2263      | Package Deposit<br>Identifier   | The identifier for the package deposit.                           | This attribute must be a GTIN and is associated with the package that is used in the return processing. A specific list of GTINs is supplied by the manufacturer of the package and in some areas is maintained by a central organisation.                                                                                                                                                                                                                                      |

| BMS<br>ID | ADB Name                                 | ADB Business Definition                                                                                         | Business Process Notes                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-----------|------------------------------------------|-----------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2181      | Pallet Type Code                         | The code that indicates the type of pallet that the unit load is delivered on.                                  | The <i>Packaging Type Code</i> and <i>Pallet Type Code</i> may be represented individually or as a unique combination of the two. The detailed packaging information (e.g. BMS IDs 2166, 2180, 2206, 2261, 2263), if used, is related to each unique instance or combination of <i>Packaging Type Code</i> and <i>Pallet Type Code</i> . If there are multiple packaging types the order in which they are communicated may make a difference, dependent on local requirements. |
| 2180      | Pallet Disposition<br>Code               | The code that describes the expected action to be taken with the pallet.                                        | [no additional notes]                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 2306      | Batch Number<br>Indicator                | The indicator specifying whether the item has a batch or lot number.                                            | This attribute does not contain the actual batch or lot number.<br>This number is typically found on the packaging itself. However,<br>the value may be "True" even when the number is not printed<br>on the package. In some cases, batch or lot number might be<br>found on the invoice or other transactional documents.                                                                                                                                                     |
| 2308      | Packaging Marked<br>Returnable Indicator | The indicator that specifies whether the product packaging is marked as returnable (with or without a deposit). | [no additional notes]                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 2334      | Packaging Date Type<br>Code              | The code indicating the type of date on the package to the buyer and consumer.                                  | Specify a code for each type of date that appears on the packaging.                                                                                                                                                                                                                                                                                                                                                                                                             |

# 9 Finance (Tax and Pricing)

This section provides an overview of the primary tax and pricing attributes used within the Global Data Model.

Requirements for providing tax information are generally driven by target market regulations. Local regulation may require additional tax information beyond the two attributes covered in this guideline, which would be provided via additional local attributes.

The price-related attributes convey pricing information used by the buyer for both communication to consumers and for guiding business process decisions.

#### 9.1 **Pricing Attributes Example**

| Retail Price is Marked on the Product Indicator | Price*   | Price Type Code            |
|-------------------------------------------------|----------|----------------------------|
| True                                            | 2.50 CAD | Retail Price on Trade Item |

\* The *Price* attribute shall always be accompanied by a currency code.

#### 9.2 Code Examples

#### 9.2.1 Tax Type Codes

This is a local code list. Some of the local market code lists are posted to the GS1 web site [<u>https://www.gs1.org/standards/gdsn/3-x</u>]. For others, please contact your local Member Organisation.

#### 9.2.2 Tax Category Codes

This section provides a subset of codes found in the Tax Category Code list. Please refer to the <u>GS1 Global Data Dictionary</u> for the full code list. (Search for this code list using the GDSN technical name *TaxCategoryCode* and select status "CURRRENT".)

| Code Value              | Code Name               | Definition                                                                                                                                                                                                                                         |
|-------------------------|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| APPLICABLE              | Applicable              | Tax applies to the item or service within the target market at the rate specified TradeItemTaxAmount or TradeItemTaxRate.                                                                                                                          |
| DOMESTIC_REVERSE_CHARGE | Domestic Reverse Charge | Code specifying that the rate is based upon the domestic reverse charge VAT treatment. This code value is particularly pertinent to the UK context.                                                                                                |
| EXEMPT                  | Exempt                  | The item or service has no taxation requirements nor any requirements related to invoicing or reporting.                                                                                                                                           |
| FREE_EXPORT_ITEM        | Free Export Item        | Code specifying that the item is free export and taxes are not charged.                                                                                                                                                                            |
| нідн                    | High                    | The Trade Item is taxed at a tax rate that is higher than any other rate of taxation for trade items. The classification of High is subject to Target Market rules and can change based on regulation.                                             |
| LOW                     | Low                     | The item or service is taxed at a tax rate that is lower than any other rate of taxation for trade items (except zero). The classification of low is subject to Target Market rules and can change based on regulation.                            |
| MEDIUM                  | Medium                  | The item or service is taxed at a tax rate that is considered to be intermediate between the lower and higher rates of taxation for trade items. The classification of medium is subject to Target Market rules and can change based on regulation |
| MIXED                   | Mixed                   | Code specifying that the rate is based on mixed tax. Transaction includes item taxed at different rates.                                                                                                                                           |

| Code Value                                  | Code Name                                  | Definition                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|---------------------------------------------|--------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NOT_APPLICABLE                              | Not Appllicable                            | Tax does not apply to the item or service within the target market.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| PREPAID                                     | Prepaid                                    | The tax, fee or duty has been paid by the supplier of the trade item.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| REDUCTION_IN_BASE                           | Reduction In Base                          | A benefit provided under the law that allows one to apply a reduction in the tax<br>basis for calculating. In general, exceptions to the basis for tax calculation are<br>the value of an operation. However, to reduce the tax, the benefit is granted to<br>a reduction in the value of this base. This code value is particularly pertinent to<br>the BR tax structure.                                                                                                                                                                                           |
| REDUCTION_IN_TAX_RATE                       | Reduction In Tax Rate                      | A reduction in the tax rate. Generally, reduced tax rates are arranged in a more objective way according to the law. This code value is particularly pertinent to the BR tax structure.                                                                                                                                                                                                                                                                                                                                                                              |
| SERVICES_OUTSIDE_SCOPE_<br>OF_TAX           | Services Outside Scope of Tax              | Code specifying that taxes are not applicable to the services.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| STANDARD                                    | Standard                                   | Tax rate used or accepted as normal or average. The classification of standard is subject to Target Market rules and can change based on regulation.                                                                                                                                                                                                                                                                                                                                                                                                                 |
| VALUE_ADDED                                 | Value Added                                | A fixed amount of tax for each product, based on criteria established by legislation rather than the conventional method which is the application of a percentage over the value of the product or operation. This code value is particularly pertinent to the Brazilian (BR) tax structure.                                                                                                                                                                                                                                                                         |
| VALUE_ADDED_MARGIN                          | Value Added Margin                         | A percentage defined by the Tax Authorities that is applied on (the value of the goods+ Federal VAT+ freight+ other expenses) aiming at obtaining a basis for calculating the substitution for the State VAT. The goal of the Value Added Margin is to calculate the State VAT according to the basis that would be applied in the last step of the production chain; in this case, it could be the final resale. Example: Final Price to Retailer = Suggested Price + Expenses + %MVA This code value is particularly pertinent to the Brazilian (BR) tax structure |
| VALUE_ADDED_TAX_NOT_NO<br>W_DUE_FOR_PAYMENT | Value Added Tax Not Now<br>Due For Payment | A code to indicate that the Value Added Tax (VAT) amount which is due on the current invoice is to be paid on receipt of a separate VAT payment request. The value added tax is not due for payment now.                                                                                                                                                                                                                                                                                                                                                             |
| VAT_REVERSE_CHARGE                          | VAT Reverse Charge                         | Code specifying that the rate is based upon the domestic reverse charge VAT treatment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| Code Value | Code Name | Definition                                                                                                                                                                        |
|------------|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ZERO       | Zero      | The item or service has a tax rate or amount equal to zero but still has requirements for invoicing and may have a rate that can be modified by the government at any given time. |

#### 9.2.3 Price Type Codes

This section provides a subset of codes found in the Price Type Code list. Please refer to the <u>GS1 Global Data Dictionary</u> for the full code list. (Search for this code list using the GDSN technical name *TradeItemPriceTypeCode* and select status "CURRENT".)

| Code Value                 | Code Name                       | Definition                                                                                                                                                                                                                                                                             |
|----------------------------|---------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| BULK_PRICE                 | Bulk Price                      | The amount of money for which the trade item is bought or sold when buying or selling a standard configuration.                                                                                                                                                                        |
| LOOSE_PRICE                | Loose Price                     | The amount of money for which the trade item is bought or sold when buying or selling individual units that are not in a standard configuration.                                                                                                                                       |
| MINIMUM_ADVERTISED_PRICE   | Minimum Advertised Price        | The minimum consumer price (amount) at which the trade item may be advertised.                                                                                                                                                                                                         |
| RETAIL_PRICE_ON_TRADE_ITEM | Retail Price on Trade Item      | The retail price as marked on the trade item package                                                                                                                                                                                                                                   |
| UMRP                       | Unilateral Minimum Retail Price | Under a Unilateral Policy (or "Colgate Policy" or "Unilateral Minimum<br>Retail Price Policy") a manufacturer, without any agreement with the<br>reseller, announces a minimum resale price and refuses to make further<br>sales to any reseller that sells below the announced price. |

### 9.3 Finance – Business Process Notes

| BMS<br>ID | ADB Name                                              | ADB Business Definition                                                                                        | Business Process Notes                                             |
|-----------|-------------------------------------------------------|----------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------|
| 1152      | Tax Type Code                                         | The code identifying a specific type of tax, levy, duty or fee associated with the type of product or service. | This code identifies the tax that is applied to the product.       |
| 1175      | Tax Category Code                                     | The code representing the level of tax rate applied by a government to the product.                            | Tax Category Code is only used if Tax Type Code is also used.      |
| 2309      | Retail Price is<br>Marked on the<br>Product Indicator | The indicator used to inform the buyer that there is a retail price on the product.                            | [no additional notes]                                              |
| 3383      | Price                                                 | The price of the product, as defined by the <i>Price Type Code</i> .                                           | A currency code shall be included with the <i>Price</i> attribute. |
| 3385      | Price Type Code                                       | The code representing the type of <i>Price</i> associated with the product.                                    | [no additional notes]                                              |

# **10** Nutritional Facts

The Nutritional Facts group of attributes is used to communicate product information relating to ingredients, allergens, additives, nutrients and serving sizes. The values needed for many of these attributes may be dictated by local or regional regulations. It is recommended to refer to local/regional market regulations when developing this information and to your local MO for best practices.

### **10.1** Allergen Attributes Example – Mixed Nuts (North American Label)

|     |                                    |                                                     |                                                                                           |                                                                                      | Attribute                       | Code Name                      | Code Name                     | Code Name                      | Code Name                            |

#### **10.6 Non-Food Ingredient Statement Example – Laundry Detergent**

#### **Non-Food Ingredient Statement**

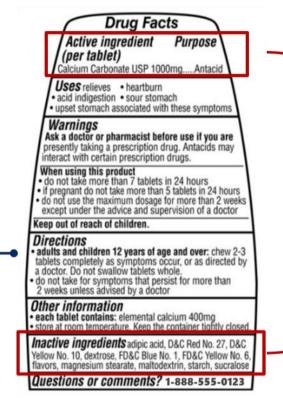

**Ingredients:** Water, Sodium Laureth Sulfate, Sodium (C10-16) Alkyl Benzenesulfonate, C10-16 Alcohols Ethoxylated, TEA Cocoate, Sodium Chloride, Fragrance, Tetrasodium Glutamate Diacetate, Polyvinyl Pyridine-N-Oxide, BHT, Benzisothiazolinone, Methylisothiazolinone, Trisodium Dicarboxymethyl Alaninate, Colorant.

> Ingredients: Water, Sodium Laureth Sulfate, Sodium (C10-16) Alkyl Benzenesulfonate, C10-16 Alcohols Ethoxylated, TEA Cocoate, Sodium Chloride, Fragrance, Tetrasodium Glutamate Diacetate, Polyvinyl Pyridine-N-Oxide, BHT, Benzisothiazolinone, Methylisothiazolinone, Trisodium Dicarboxymethyl Alaninate, Colorant.

#### **10.7** Non-Food Ingredient Statement Example – Active and Inactive Ingredients

### **Non-Food Ingredient Statement**

Active ingredient (per tablet) Calcium Carbonate USP 1000mg Purpose.....Antacid Inactive ingredients adipic acid, D&C Red No.27, D&C Yellow No. 10, dextrose, FD&C Blue No.1, FD&C Yellow No. 6, flavors, magnesium stearate, maltodextrin, starch, sucralose

#### **10.8** Nutritional Facts Attributes – Business Process Notes

#### **10.8.1** Allergen Attributes

Refer to local/regional market regulations when developing allergen information (BMS IDs 370, 373, 375, 376).

| BMS<br>ID | ADB Name                           | ADB Business Definition                                                                                                                    | Business Process Notes                                                                                                                                                                                                                                                                                                     |
|-----------|------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 370       | Allergen Statement                 | The statement to the consumer on the presence<br>of allergens, based on local rules or regulations,<br>as stated on the product packaging. | This is exactly the way allergens are referenced or stated on the<br>package. In some markets this statement is a reference on where to<br>find the allergens on package. Other markets list the ingredients which<br>are allergens from the ingredient statement.<br>Also known as "Contains" or "May contain" statement. |
| 373       | Allergen Declarations<br>Indicator | The indicator used by the seller to confirm whether the relevant allergen data provided for the product is complete.                       | This is set to "True" when the allergen information that is provided<br>is complete. In cases where all allergen information is not yet<br>known, the value would be "False". In cases where allergen<br>information is not provided because there are no allergens this<br>would be set to "True".                        |
| 375       | Allergen Type Code                 | The code to indicate a specific allergen.                                                                                                  | Allergen Type Code and Allergen Containment Code are always                                                                                                                                                                                                                                                                |
| 376       | Allergen Containment<br>Code       | The code to indicate the precision of an allergen in a product.                                                                            | used together. These are repeated for each allergen.                                                                                                                                                                                                                                                                       |

#### **10.8.2 Nutrient Quantity Attributes**

When populating nutrient quantity attributes, please review attributes 1732, 1733, 1734 and (if on label) 1731 and 1736 as a group to ensure that all required attributes are included, as per regulation. This group of attributes may need to be repeated (based on local and regional regulations) when certain high-level attributes change. For example, when *Nutrient Basis* or *Serving Size* change, the group of related attributes must be repeated for each variant.

| BMS<br>ID | ADB Name                                             | ADB Business Definition                                                                                                                                                   | Business Process Notes                                                                                                                                                                                                                   |
|-----------|------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1733      | Nutrient Code                                        | The code that represents a nutrient or energy element that is found in the product                                                                                        | This attribute is required if the manufacturer is providing nutrient<br>information. Note that the majority of these codes are derived from<br>the UN INFOODS tag names. Additional codes have been created<br>as part of GS1 standards. |
| 1731      | Daily Nutrient Value<br>Percentage                   | The amount of the nutrient contained in the product as a percentage of the daily intake reference.                                                                        | [no additional notes]                                                                                                                                                                                                                    |
| 1736      | Daily Nutrient Value<br>Percentage Precision<br>Code | The code indicating whether the specified<br>nutrient content for the Daily Value Intake<br>percentage is exact or approximate or less than<br>as required by regulation. | [no additional notes]                                                                                                                                                                                                                    |
| 1734      | Nutrient Quantity                                    | The value that indicates the amount of nutrient<br>element or energy contained in the product per<br>defined quantity with its unit of measure.                           | [no additional notes]                                                                                                                                                                                                                    |
| 1732      | Nutrient Value<br>Precision Code                     | The code indicating whether the specified<br>nutrient content is approximate or less than as<br>required by regulation and as shown on the<br>product package.            | [no additional notes]                                                                                                                                                                                                                    |

#### **10.8.3** Nutrient Basis and Serving Size Attributes

These attributes may be used differently and in different combinations from region to region. Refer to your local MO for local or regional best practices.

| BMS<br>ID | ADB Name                      | ADB Business Definition                                                                                                                  | Business Process Notes                                                                                                                                                                                                                                                                                                                            |
|-----------|-------------------------------|------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1714      | Nutrient Basis                | The value, with its unit of measure, that forms<br>the basis for referring to the nutrient content that<br>appears on the product label. | [no additional notes]                                                                                                                                                                                                                                                                                                                             |
| 1718      | Serving Size                  | The value, with its unit of measure, that forms<br>the basis for referring to the nutrient contents<br>that appear on the product label. | [no additional notes]                                                                                                                                                                                                                                                                                                                             |
| 1720      | Serving Size<br>Description   | The description or additional information of the serving size for the product.                                                           | Serving Size Description should be used if Serving Size cannot be<br>adequately expressed only as a number and unit of measure. For<br>example, a label that indicates "50 g (1 chocolate bar)" would be<br>expressed as "50 g" in Serving Size and "50 g (1 chocolate bar)" in<br>Serving Size Description.                                      |
| 5872      | Nutrient Basis<br>Description | The description or additional information of the serving size for the product.                                                           | <i>Nutrient Basis Description</i> should be used if <i>Nutrient Basis</i> cannot<br>be adequately expressed only as a number and unit of measure.<br>For example, a label that indicates "50 g (1 chocolate bar)" would<br>be expressed as "50 g" in <i>Nutrient Basis</i> and "50 g (1 chocolate<br>bar)" in <i>Nutrient Basis Description</i> . |

### **10.8.4** Ingredients, Additives and Other Nutritional Attributes

| BMS<br>ID | ADB Name                               | ADB Business Definition                                                                                             | Business Process Notes                                                                                                                                                                                                                                                                                        |
|-----------|----------------------------------------|---------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1268      | Ingredient Statement                   | The composition of the product that matches what appears on the package.                                            | It is best practice to include the statement in all languages that appear on package. The attribute is repeatable by language.                                                                                                                                                                                |
| 1623      | Non-Food Ingredient<br>Statement       | The text used to describe the composition of the product that matches what appears on the label.                    | It is best practice to include the statement in all languages that appear on package. The attribute is repeatable by language.                                                                                                                                                                                |
| 1272      | Additive Name                          | The name of an additive that is or may be contained in the product.                                                 | Additive Name and Additive Containment Code are always used                                                                                                                                                                                                                                                   |
| 1273      | Additive Containment<br>Code           | The code to indicate the precision of an additive in the product.                                                   | together. These are repeated for each additive. These attributes may be required by local regulations for specific products.                                                                                                                                                                                  |
| 1364      | Servings Per Product                   | The total number of servings contained in the product as shown on the product package.                              | This may also be known as "servings per package" or "servings per container".                                                                                                                                                                                                                                 |
| 1365      | Servings Per Product<br>Precision Code | The code indicating whether the specified<br>Serving Per Product is approximate as shown on<br>the product package. | This is used to designate terms such as "Approximately" and "About" when used on package.                                                                                                                                                                                                                     |
| 1367      | Range of the Number of Servings        | The range of the number of servings in the product as shown on the product package.                                 | [no additional notes]                                                                                                                                                                                                                                                                                         |
| 1694      | Nutrient Declarations<br>Indicator     | The indicator that confirms the relevant nutrient data provided for the product is complete.                        | This is set to "True" when the nutrient information that is provided<br>is complete. In cases where all nutrient information is not yet<br>known, the value would be "False". In cases where nutrient<br>information is not provided because there is no nutrient<br>information this would be set to "True". |

| BMS<br>ID | ADB Name                        | ADB Business Definition                                                                                                                                                    | Business Process Notes                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-----------|---------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1712      | Daily Intake<br>Reference       | The statement to the consumer describing the<br>basis for calculating the percentage of nutrients<br>that contribute to the recommended daily intake<br>set by regulation. | In most markets, the statements needed for this attribute are explicitly provided by regulation. The nutrient group of attributes may be repeated, with the <i>Daily Intake Reference</i> varying, for different nutrient panels (e.g., adult vs child nutrient requirements).<br>Sample statement for EU:<br>"Reference intake of an average adult (8400 kJ/ 2000 kcal)"<br>Sample statement for US:<br>"Based on a 2,000 calorie diet." |
| 1717      | Nutritional<br>Preparation Code | The code indicating whether the product is<br>unaltered versus a product that has been altered<br>by consumer preparation, in conjunction with the<br>nutritional panel.   | The code value "unprepared" refers to nutritional information for<br>the product as it is directly off the shelf. Other codes are used<br>when nutritional information is calculated based on other<br>preparation types.                                                                                                                                                                                                                 |

# **11 Digital Assets**

This section contains a group of attributes used by sellers to identify digital assets (e.g., image files, documents and other web resources) and to identify the start and end dates during which these assets may be shared with consumers.

### **11.1 Digital Asset Type Code Examples**

This table includes a <u>sampling</u> of code list values associated with the *Digital Asset Type Code* attribute. Refer to the <u>GS1 Global Data Dictionary</u> to see the <u>full code list</u>. Note that the GS1 GDD attribute name is *ReferencedFileTypeCode*.

| Code Value                    | Code Name                     | Code Definition                                                                                                                                                                                                                                            |
|-------------------------------|-------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ASSEMBLY_INSTRUCTIONS         | Assembly Instructions         | Link to a file the explains how to assemble (put together) the trade item.                                                                                                                                                                                 |
| CONSUMER_HANDLING_AND_STORAGE | Consumer Handling and Storage | Link to a website, file, or image containing the manufacturer's recommendations for how the consumer or end user should store and handle the product.                                                                                                      |
| PRODUCT_IMAGE                 | Product Image                 | Link to a file containing a visual representation of the product.                                                                                                                                                                                          |
| QR_CODE                       | Link to QR Code               | Link to a QR code URL/URI.                                                                                                                                                                                                                                 |
| SAFETY_DATA_SHEET             | Safety Data Sheet             | Link to a file containing the product's Safety Data Sheet (SDS). This file can be either an image or a document                                                                                                                                            |
| TECHNICAL_DATA_SHEET          | Technical data sheet          | The product specification sheet, created by the manufacturer, summarises the technical characteristics and other properties of the product, relating to technological and commercial purposes. Example: https://dl.gedal.fr/docsgedal/FP/3255290252425.pdf |
| VIDEO                         | Video                         | Link to a file containing a video clip which is relevant to the product. Examples are commercials, trailers, or instructional/ how to use video files.                                                                                                     |
| WEBSITE                       | Website                       | Link to a website containing product or manufacturer information.                                                                                                                                                                                          |

### **11.2 Digital Assets Attributes – Business Process Notes**

| BMS<br>ID | ADB Name                         | ADB Business Definition                                                                                   | Business Process Notes                                                                                                                                                                                                                                                |
|-----------|----------------------------------|-----------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2989      | Digital Asset End<br>Date/Time   | The date/time on which the digital asset can no longer be used.                                           | <i>Digital Asset End Date/Time</i> conveys the existing image is no longer valid. In the instance of discontinuation of a product, there will be other attributes that will convey this information.                                                                  |
|           |                                  |                                                                                                           | If the seller has not specified a <i>Digital Asset End Date/Time</i> , the buyer has the opportunity to use the image until some form of stop-use is communicated.                                                                                                    |
| 2990      | Digital Asset Start<br>Date/Time | The date/time on which the digital asset can be used.                                                     | [No additional notes]                                                                                                                                                                                                                                                 |
| 2995      | Digital Asset File<br>Name       | The file name of the digital asset, for images according to the GS1 Product Image Specification Standard. | The <i>Digital Asset File Name</i> (for example<br>"00012345678905_C1C1.jpg") is typically found at the end of the<br><i>Product Image URL</i> .<br>If the file name contains an extension it <i>shall</i> be included in the file<br>name.                           |
|           |                                  |                                                                                                           | There are various naming conventions that accommodate other digital assets that are not images.                                                                                                                                                                       |
| 2999      | Digital Asset Type<br>Code       | The code identifying the type of digital asset that is being referenced.                                  | Use the most specific code in the code list. For example, if a seller is providing a digital asset relating to organic certification, then the seller would provide the code for <i>organic certificate</i> as opposed to the general code for <i>certification</i> . |

| BMS<br>ID | ADB Name          | ADB Business Definition                                                                                                                                                                                                    | Business Process Notes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-----------|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3000      | Product Image URL | The Uniform Resource Locator (URL) for the high-resolution product image that clearly depicts the primary selling surface of the product. Buyers should be able to use the image to authenticate the identity of the item. | In the example where <i>Digital Asset File Name</i> equals<br>"00012345678905_C1C1.jpg", the <i>Product Image URL</i> might be<br>"http://www.ourcompany.com/images/00012345678905_C1C1.jpg".<br>As a best practice, the URL should be available for as long as the<br>digital asset is available for use.                                                                                                                                                                                                                     |
|           |                   |                                                                                                                                                                                                                            | <b>Note:</b> Buyers may want to be aware of the timeframes associated with the validity of any provided URL. If the seller is providing the digital asset via URL, the timeframe for the use of the URL should be clearly communicated to the buyer. For example, the URL should be valid between the <i>Digital Asset Start Date/Time</i> and <i>Digital Asset End Date/Time</i> of the image file. If there is no <i>Digital Asset Start Date/Time</i> provided, the URL should be valid from the time the data is received. |

# **12** Compliance, Regulatory and Import Classification

This group of attributes includes information usually governed by local or regional market regulation, including country of origin, customs requirements, hazardous materials and other data required for regulatory compliance.

### **12.1** Examples of Additional Legal Product Information on Label

Examples of the Additional Legal *Product Information* content as they appear on the packaging (circled in red).

INGREDIENTS: ORGANIC WHOLE GRAIN BARLEY FLOUR, ORGANIC WHOLE GRAIN OAT FLOUR, ORGANIC WHOLE GRAIN SPELT (WHEAT) FLOUR, VITAMINS & MINERALS (CALCIUM PHOSPHATE, FERRIC PYROPHOSPHATE, FOLIC ACID, ALPHA TOCOPHERYL ACETATE [VITAMIN E], NIACINAMIDE [VITAMIN B3], ZINC OXIDE, CYANOCOBALAMIN [VITAMIN B12], THIAMINE MONONITRATE [VITAMIN B1], RIBOFLAVIN [VITAMIN B2], PYRIDOXINE HYDROCHLORIDE [VITAMIN B6]), ALPHA AMYLASE [ENZYME).

CONTAINS: WHEAT.

CERTIFIED ORGANIC

**Distributed by:** 

The Organic Cereal Group Bloomdell, NJ 07404 USA

Package sold by weight, not volume. (Contents may settle during shipping.)

#### 12.2 Compliance, Regulatory and Import Classification – Business Process Notes

#### 12.2.1 Compliance and Regulation Attributes

**Note:** The group of attributes that includes BMS IDs 3070, 3074 and 3087 may be repeated for each regulation or if a regulation is associated with multiple agencies. Please refer to the "Regulatory Compliance Attributes" section of the GDSN Trade Item Implementation Guide [https://www.gs1.org/standards/gdsn/trade\_implementation\_guide] for more detailed guidance on these attributes.

| BMS<br>ID | ADB Name                            | ADB Business Definition                                                                                                                                                                 | Business Process Notes                                                                                                                                                                                                                                                                                                                                                                                   |
|-----------|-------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3070      | Regulation Type<br>Code             | The code indicating a regulation. Used in conjunction with <i>Regulation Compliance Indicator</i> .                                                                                     | This attribute primarily provides a broad categorization of regulations that may differ across markets. They may have a specific act or regulation number which differs from one country of sale to the next. For example, the codes "Consumer Product Safety" or "E-mark".                                                                                                                              |
| 3074      | Regulation<br>Compliance Indicator  | The indicator specifying whether the product is compliant, not compliant or not applicable to the regulation associated with the <i>Regulation Type Code</i> .                          | [no additional notes]                                                                                                                                                                                                                                                                                                                                                                                    |
| 3087      | Regulatory Permit<br>Identification | The number or value of a permit or approval license assigned to the product or seller provided by the regulatory agency.                                                                | This attribute may be tightly tied to local market regulation, therefore local guidance may be needed.                                                                                                                                                                                                                                                                                                   |
| 3515      | Regulated Product<br>Name           | The product name provided by the seller in<br>adherence with laws, regulations or<br>administrative provisions applicable in the<br>country. Not all products have a regulated<br>name. | This must exactly reflect what is printed on the label. In the EU this is used for food and beverages ("legal name of the food") and for pet food ("name of the feed material"). In cases where there is a local validation rule that requires this attribute but there is no applicable regulated name, this may be populated with the same value as the <i>Product Type Description</i> (BMS ID 3508). |

| BMS<br>ID | ADB Name                                | ADB Business Definition                                                                                | Business Process Notes                                                                                       |
|-----------|-----------------------------------------|--------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------|
| 1457      | Additional Legal<br>Product Information | Describes legally required information about<br>the product that is found on the product<br>packaging. | This attribute is used to capture legally required information that cannot be described in other attributes. |

#### **12.2.2 Hazardous Materials Attributes**

**Note:** The hazardous materials attributes are consumer facing, i.e. the information is expected to be present on the product label.

| BMS<br>ID | ADB Name                             | ADB Business Definition                                                                                                                                     | Business Process Notes                                                                                                                                                                                                                                                                        |
|-----------|--------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3237      | Signal Words Code                    | The code for words from the Globally<br>Harmonized System (GHS) to indicate the<br>relative level of severity of the hazard and is<br>usually on the label. | Reflects what is on the label. This can be either the word<br>"Danger" or "Warning". If neither of those words are present on<br>the label, a seller could either leave this attribute empty or use<br>the code "Not Applicable" if required.                                                 |
| 3238      | Hazardous Symbol<br>Description Code | The code from the Globally Harmonized<br>System (GHS) identifying the symbols or<br>pictograms for a hazardous product.                                     | If any of the GHS Hazard pictograms appear on the label, then<br>select the code(s) representing the appropriate pictogram(s).<br>While this attribute is used to inform a consumer, it is also used for<br>logistic purposes and therefore symbol(s) could be found on<br>packaging as well. |
| 3240      | Hazardous<br>Statements Code         | The code (also known as H code) identifying the standard phrase describing the nature of a hazard class and category.                                       | If any of the GHS Hazard Statements (and possibly its H Code) appear on the label, then select the code(s) representing the appropriate statement.                                                                                                                                            |

| BMS<br>ID | ADB Name                                  | ADB Business Definition                                                                                                                                      | Business Process Notes                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-----------|-------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |                                           |                                                                                                                                                              | The statement will appear on the label, and optionally, the code will<br>sometimes appear in addition with the statement.<br>There may be additional market-specific codes that could be<br>populated in this attribute. Refer to local market regulations to<br>determine which codes are applicable (e.g. EUH Code in the<br>European market).                                                                                                                          |
| 3241      | Hazardous<br>Statements<br>Description    | The description of the standard phrase (also<br>known as H statement) assigned to a hazard<br>class and category that describes the nature of<br>the hazard. | What appears on the label could be comprised of both a fixed<br>element (statement description) and a variable element (added<br>specifics). For example, a Hazardous Statement could warn of<br>toxicity to the body, but the seller would add the variable element<br>that specifies the body part that is in danger. In this case, the seller<br>should provide the exact statement (including variable elements) as<br>it appears on the label.                       |
| 3244      | Precautionary<br>Statement Code           | The code (also known as a P code) identifying<br>the standard phrase describing precautionary<br>actions or correct handling.                                | If any of the GHS Precautionary Statements (and possibly its P<br>Code) appear on the label, then select the code(s) representing the<br>appropriate statement.<br>The statement will appear on the label, and optionally, the code will<br>sometimes appear in addition with the statement.<br>There may be additional market-specific codes that could be<br>populated in this attribute. Refer to local market regulations to<br>determine which codes are applicable. |
| 3245      | Precautionary<br>Statement<br>Description | The description of the specified precautionary statement (also known as P statement) on a hazardous label.                                                   | What appears on the label could be comprised of both a fixed<br>element (statement description) and a variable element (added<br>specifics). For example, a Precautionary Statement could indicate<br>that a product should be stored at a temperature not exceeding a<br>certain number, but the seller would substitute the specific<br>temperature value.                                                                                                              |

| BMS<br>ID | ADB Name                                    | ADB Business Definition                                                                                                                                                                                                | Business Process Notes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------|---------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |                                             |                                                                                                                                                                                                                        | The Precautionary Statement may also warn against adverse effects<br>in the case of improper use of a product, and the seller would insert<br>the actions taken to remediate the effects.<br>In some instances, the actions needed may be represented by<br>another P Code (e.g., P302 + P334: IF ON SKIN: Immerse in cool<br>water/wrap in wet bandages.) In this case the <i>Precautionary</i><br><i>Statement Description</i> is not needed.<br>In all cases, the seller should provide the exact statement (including<br>variable elements) as it appears on the label, whether it is in the<br>form of a series of P Codes only, or P Codes combined with the<br><i>Precautionary Statement Description</i> . |
| 3894      | United Nations<br>Dangerous Goods<br>Number | The four-digit number assigned by the United<br>Nations Committee of Experts on the transport<br>of dangerous goods that identifies dangerous<br>goods, such as explosives, flammable liquids<br>and toxic substances. | This information is often found in the Safety Data Sheet (also known as SDS or MSDS).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

#### 12.2.2.1 Hazardous Symbol Description Code

The chart below provides the complete set of code list values and accompanying pictograms associated with the *Hazardous Symbol Description Code*.

| Code Value | Code Name | Description                                     | Symbol |
|------------|-----------|-------------------------------------------------|--------|
| CORROSION  | Corrosion | Depicts corrosives to skin, eyes and/or metals. |        |

| ENVIRONMENT       | Environment       | Tree and dead fish. Depicts hazards to the aquatic environment.      |              |
|-------------------|-------------------|----------------------------------------------------------------------|--------------|
| EXCLAMATION_MARK  | Exclamation Mark  | Depicts other health hazards.                                        | !>           |
| EXPLODING_BOMB    | Exploding Bomb    | Depicts explosives and some self-reactives and/or organic peroxides. |              |
| FLAME             | Flame             | Depicts flammable substances.                                        |              |
| FLAME_OVER_CIRCLE | Flame Over Circle | Depicts oxidizing gases, liquids or solids.                          |              |
| GAS_CYLINDER      | Gas Cylinder      | Depicts gases under pressure.                                        | $\widehat{}$ |
| HEALTH_HAZARD     | Health Hazard     | Depicts severe health hazards.                                       |              |

| SKULL_AND_CROSS_BONES | Skull and Cross<br>Bones | Depicts acute toxicity.           |  |
|-----------------------|--------------------------|-----------------------------------|--|
| NO_PICTOGRAM          | No Pictogram             | No Pictogram symbol is available. |  |

### **12.3** Import Classification (Country of Origin) – Business Process Notes

| BMS<br>ID | ADB Name                               | ADB Business Definition                                                                              | Business Process Notes                                                                                                                                                                                                                                                                                                                                      |
|-----------|----------------------------------------|------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 112       | Country Of Sale<br>Code                | The code representing the country where the physical or non-physical product is intended to be sold. | The <i>Country of Sale Code</i> is used to indicate that the item<br>information being provided is valid for the specified country(ies).<br>An example of an indicator of the intended country of sale is the<br>languages, markings and codings printed on the packaging label.<br>These may be guided by regulatory requirements in the target<br>market. |
| 2776      | Customs<br>Classification Type<br>Code | The code that describes the customs classification system.                                           | This attribute is always used in conjunction with the <i>Customs Classification Value</i> .                                                                                                                                                                                                                                                                 |
| 2777      | Customs<br>Classification Value        | The tariff value applied to a product associated with the Customs Classification Type Code.          | This attribute is always used in conjunction with the <i>Customs Classification Type Code</i> .                                                                                                                                                                                                                                                             |

| BMS<br>ID | ADB Name                         | ADB Business Definition                                                                                                                                                                                                                                         | Business Process Notes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-----------|----------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2781      | Country of Origin<br>Declaration | The statement about the country of origin, as declared on the product label, which can be any country where the product is indicated to have come from (it may or may not be the same as <i>Country of Origin Code</i> ).                                       | Further details regarding regional requirements and usage are described in the Global Data Model conditional/mandatory statements.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 2783      | Origin Declaration               | The exact statement about the place of origin,<br>as declared on the product label, which can be<br>any place where the product is indicated to<br>have come from (it may or may not be the<br>same as <i>Country of Origin</i> ).                              | Further details regarding regional requirements and usage are described in the Global Data Model conditional/mandatory statements.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 2794      | Country of Origin<br>Code        | The code used to declare where the product is<br>produced for regulatory / custom's<br>requirements. In the case of multiple countries,<br>the country in which the last substantial<br>process or operation, that is economically<br>justified, was performed. | <ul> <li>For most types of products that are made from parts manufactured in multiple countries but which are assembled in a different country, the <i>Country of Origin Code</i> represents the country in which the final product is assembled. (For example, an automobile assembled in Germany from parts made in Germany, Belgium and Netherlands would specify only the <i>Country of Origin Code</i> for Germany.)</li> <li>For cases where identical products have been manufactured in multiple countries, all applicable <i>Country of Origin Code</i> values should be specified.</li> <li>For the fresh fruits and vegetables product group there is an exception whereby the <i>Country of Origin Code</i> may need to be specified for multiple countries when items originating from different countries are packaged together. (For example, a multipack of vegetables packaged in Spain but containing items</li> </ul> |

# **13** Claims and Certifications

This group of attributes consists of codes and statements that describe claims about a product (for example regional origin, growing/manufacturing method, ingredient purity, dietary certification, etc.) and the governing bodies that certify such claims. These values are usually governed by local or regional market regulation.

#### **13.1** Example of Third Party Accreditation Symbol on Product Package Code – North America

| Code Value   | Code Name    | Description                                                                                                                                                                                                                                                                                                                                                                                                                  | Symbol          |
|--------------|--------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| USDA_ORGANIC | USDA Organic | The U.S. Department of Agriculture has put in place a set of national standards that food labelled products must meet, whether it is grown in the United States or imported from other countries. Organic foods are produced without using most conventional pesticides; fertilizers made with synthetic ingredients or sewage sludge; bioengineering; or ionizing radiation. http://www.usda.gov/wps/portal/usda/usdahome . | USDA<br>ORGANIC |

### 13.2 Example of Third Party Accreditation Symbol on Product Package Code – Europe

| Code Value                 | Code Name              | Description                                                                                                                                                                                                                                                                     | Symbol                    |
|----------------------------|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------|
| EU_ORGANIC_FARMING         |                        | New EU organic logo the EU introduced a new organic logo to ensure consumer protection and common standards. See www.organic-farming.europa.eu                                                                                                                                  | ter set                   |
| AGRICULTURE_BIOLOGI<br>QUE | Agriculture Biologique | France's national logo for organic products since 1985. Organic products carrying the logo must contain more than 95 percent organic components and be produced or processed within the EU and were certified by one of the inspection bodies accredited according to EN 45011. | AGRICULTURE<br>BIOLOGIQUE |

## **13.3** Claims and Certifications– Business Process Notes

| BMS<br>ID | ADB Name                                                          | ADB Business Definition                                                                                                    | Business Process Notes                                                                                                                                                                                                         |
|-----------|-------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1258      | Genetically Modified<br>Declaration Code                          | The code indicating the presence or absence of genetically modified protein or DNA (deoxyribonucleic acid) in the product. | [no additional notes]                                                                                                                                                                                                          |
| 1682      | Nutritional/Health<br>Claim Description                           | The information provided by the seller about the product's nutritional/health claims.                                      | In most markets, <i>Nutritional/Health Claim Description</i> is not to be<br>used for marketing claims, but only for legal claims.<br>Additionally, the <i>Product Marketing Message</i> may be used for any<br>type of claim. |
| 1709      | Element Claim Code                                                | The code used to reference a specific element claim about the product.                                                     | <i>Element Claim Code</i> is usually used with <i>Claim Type Code. Element Claim Code</i> is intended to provide a structured format for precision in search and discovery.                                                    |
| 1710      | Claim Type Code                                                   | The code that states the type of claim relevant to the Element Claim Code.                                                 | Claim Type Code is usually used with Element Claim Code.                                                                                                                                                                       |
| 2312      | Third Party<br>Accreditation Symbol<br>on Product Package<br>Code | The code representing a symbol or marking third party accreditation on the product package.                                | [no additional notes]                                                                                                                                                                                                          |

### **13.4** Claims and Certifications – Code List Examples

#### 13.4.1 Genetically Modified Declaration Code

The table below includes the code list values associated with the *Genetically Modified Declaration Code* attribute. Refer to the <u>GS1 Global Data Dictionary</u> to see the <u>current full code list</u>. Note that the GS1 GDD attribute name is *LevelOfContainmentCode*.

| Code Value  | Code Name                                             | Description                                                                                                                                                                                                                                                                                                                           |
|-------------|-------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 30          | Substance Not<br>Intentionally Included<br>in Product | The substance is not intentionally nor inherently included in the product, however because it is assessed to not require a cross contact declaration, product testing may not always be conducted for confirmation for example milk not inherently containing shellfish or peanuts or cheese sticks with no declaration of shellfish. |
| 50          | Derived From                                          | Derived From: The product has been derived from ingredients with the specified condition as defined by the regulatory authority in the target market.                                                                                                                                                                                 |
| 60          | Not Derived From                                      | Not Derived From: The product has not been derived from ingredients with the specified condition as defined by the regulatory authority in the target market.                                                                                                                                                                         |
| CONTAINS    | Contains                                              | Intentionally included in the product.                                                                                                                                                                                                                                                                                                |
| FREE_FROM   | Free From                                             | The product is free from the indicated substance. "Free from" may be defined by a regulatory authority in the target market.                                                                                                                                                                                                          |
| MAY_CONTAIN | May Contain                                           | The substance is not intentionally included, but due to shared production facilities or other reasons, the product may contain the substance.                                                                                                                                                                                         |
| UNDECLARED  | Undeclared                                            | Not intentionally included and assessed not to require a cross-contact declaration.<br>"Undeclared" may be defined by a regulatory authority in the target market.                                                                                                                                                                    |

#### 13.4.2 Element Claim Code

This table includes a <u>sampling</u> of code list values associated with the *Element Claim Code* attribute. Refer to the <u>GS1 Global Data Dictionary</u> to see the current <u>full code list</u>. Note that the GS1 GDD attribute name is *NutritionalClaimNutrientElementCode*.

| Code Value      | Code Name       | Description                                                                                                                                                                                                                                                                                                                                                   |
|-----------------|-----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CORN_SYRUP      | Corn Syrup      | Corn syrup.                                                                                                                                                                                                                                                                                                                                                   |
| DIETARY_FIBRE   | Dietary Fibre   | The USFDA definition for Dietary fibre that can be declared on the Nutrition Facts label includes certain naturally occurring fibres that are "intrinsic and intact" in plants, and added isolated or synthetic non-digestible soluble and insoluble carbohydrates that FDA has determined have beneficial physiological effects to human health. www.fda.gov |
| GLUTEN          | Gluten          | Gluten.                                                                                                                                                                                                                                                                                                                                                       |
| MILK_PROTEIN    | Milk Protein    | Milk proteins.                                                                                                                                                                                                                                                                                                                                                |
| NATURAL_FLAVOUR | Natural Flavour | Flavouring substances obtained from plant or animal raw materials, by physical, microbiological or enzymatic processes.                                                                                                                                                                                                                                       |
| PEANUTS         | Peanuts         | A claim that a food is free from peanuts. Note the amount that determines containment<br>or lack of containment is based on target market regulations.                                                                                                                                                                                                        |
| PROBIOTICS      | Probiotics      | Probiotics.                                                                                                                                                                                                                                                                                                                                                   |
| VITAMIN_D       | Vitamin D       | Vitamin D                                                                                                                                                                                                                                                                                                                                                     |
| WHOLE_GRAIN     | Whole grain     | The intact grain or the dehulled, ground, milled, cracked or flaked grain where the constituents – endosperm, germ and bran – are present in such proportions that represent the typical ratio of those fractions occurring in the whole cereal.                                                                                                              |

#### **13.4.3 Claim Type Code**

This table includes a <u>sampling</u> of code list values associated with the *Claim Type Code* attribute. Refer to the <u>GS1 Global Data Dictionary</u> to see the current <u>full code list</u>. Note that the GS1 GDD attribute name is *NutritionalClaimTypeCode*.

| Code Value                 | Code Name                     | Description                                                                                                                                                                                                                             |
|----------------------------|-------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ADDED                      | Added                         | A claim stating that a substance (e.g. sugar) has been added to a food.                                                                                                                                                                 |
| CONTAINS                   | Contains                      | A claim that a food contains the ingredient/nutrition/etc specified in the nutritionalClaimNutrientElementCode. Note the amount that determines containment or lack of containment is based on target market regulations.               |
| FREE_FROM                  | Free From                     | A claim that a food is free from specific ingredient/nutrition/etc.in the nutritionalClaimNutrientElementCode. Note the amount that determines containment or lack of containment is based on target market regulations.                |
| MADE_IN_FACILITY_FREE_FROM | Made in Facility Free<br>From | Trade item is made in a facility that is free from a specified element. This usually is regulated in a market by an authority. Please refer to the regulation specific to your market.                                                  |
| NATURAL_SOURCE_OF          | Natural Source of             | A claim that a food is a natural source of the substance in the nutritionalClaimNutrientElementCode. Note the amount that determines if the product is a significant source of a given substance is based on target market regulations. |
| RAISED_WITHOUT             | Raised Without                | A claim the trade item is raised without any of a specified element.                                                                                                                                                                    |
| REDUCED_LESS               | Reduced Less                  | A claim that a food has a reduced amount of the substance in the nutritionalClaimNutrientElementCode. Note the amount that determines a reduced amount is based on target market regulations.                                           |
| UNSWEETENED                | Unsweetened                   | Without sugar or a similar substance having been added                                                                                                                                                                                  |

#### 13.4.4 Third Party Accreditation Symbol on Product Package Code

This table includes a <u>sampling</u> of code list values associated with the *Third Party Accreditation Symbol on Product Package Code* attribute. Refer to the <u>GS1 Global Data Dictionary</u> to see the current <u>full code list</u>. Note that the GS1 GDD attribute name is *PackagingMarkedLabelAccreditationCode*.

**IMPORTANT:** The GDD contains only the code values, names and descriptions. The symbol images can be found in the **Packaging Label Guide** downloaded from the current <u>GS1 GDSN Standard</u> web page. Select the link for the current version of the GDSN standard, then scroll down to select the **Packaging Label Guide**. If you would like to submit a code/symbol for consideration for addition to the global standard, you may submit a work request to the Global Master Data – Standards Maintenance Group. For more information, you may contact GSMP@gs1.org.

| Code Value                     | Code Name                                                      | Description                                                                                                                                                                                                                    | Symbol                                  |
|--------------------------------|----------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------|
| 100_PERCENT_CANADIA<br>N_MILK  | 100 Percent Canadian<br>Milk                                   | The use of a "100% Canadian Milk" or "100% Canadian Dairy" claim, with or without logos, vignettes etc., when used on dairy products, indicates all of the dairy ingredients in the product are derived from Canadian sources. | HOOSE CANADIAN HILL                     |

| GAP_1                                   | Global Animal<br>Partnership (G.A.P.) 1   | Animal Welfare Certified - Base Certification: Base certification is our minimum G.A.P. animal welfare certification level. This means that all of the farms and/or ranches raising the animal have met over 100+ animal welfare standards including more space to move around, and no cages or crates that would confine them. When you see our G.A.P. Animal Welfare Certified label, it means that the animals were raised without antibiotics and no added hormones, and were also fed a vegetarian diet with no animal by-products.                                                                                                                                                                                                                                                                                                                          | ANIMAL<br>WELFARE<br>CERTIFIED<br>CertifiedGAP.org |

# **14 Product Life Cycle**

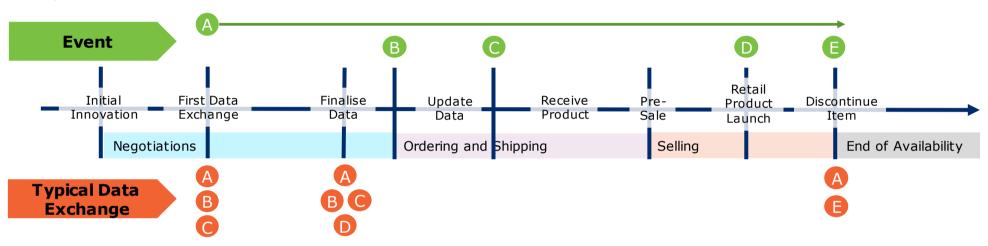

This group of attributes may also be described as the "Date/Time" attributes. They describe dates/times associated with product life cycle events from initial development of a product through ordering and shipping, retail sales and eventual discontinuation and end of availability. These attributes allow trading partners (sellers and buyers) to communicate and coordinate the timing of commerce.

## 14.1 **Product Life Cycle Attributes – Timeline Example**

This diagram provides a high-level example showing how the exchange of product date/time attributes correlate to product life cycle events leading to (and after) product availability for consumer purchase. Actual life cycle processes and time spans will vary by product, country and customer requirements.

|   | Attribute Name                                                                                                          | Notes                                                                                                                                                                                                                                     |
|---|-------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|   |                                                                                                                         | This date will be provided each time any new/changed data is communicated to the buyer.<br>This date refers to the validity of the data set describing a product and not to an activity<br>related to the physical movement of a product. |
| В | First Order Date/Time                                                                                                   | Seller is first able to process orders for the product.                                                                                                                                                                                   |
| С | First Ship Date/Time                                                                                                    | Seller is first able to start shipping the product.                                                                                                                                                                                       |
| D | D Consumer Restricted Delivery Date/Time Consumer is first able to take possession of the product, even if ordered ahea |                                                                                                                                                                                                                                           |
| E | End Availability Date/Time                                                                                              | Product is no longer available for ordering. This may be known earlier for seasonal items. It may not be known for day-to-day products.                                                                                                   |

# **14.2 Product Life Cycle – Business Process Notes**

| BMS<br>ID | ADB Name                                   | ADB Business Definition                                                                           | Business Process Notes                                                                                                                                                                                                                                             |
|-----------|--------------------------------------------|---------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 144       | Product Information<br>Effective Date/Time | The date/time when the product information becomes effective.                                     | This attribute is included each time the product data is exchanged.<br>This date may change during the course of the product cycle as new<br>information becomes available. The date is always the current or<br>future date.                                      |
|           |                                            |                                                                                                   | Recipients may note that this date could vary for different sellers of the same product.                                                                                                                                                                           |
| 1002      | End Availability<br>Date/Time              | The date/time when the product is no longer available for order from the seller.                  | A seller may provide different dates to buyers. For the buyer, the date is specific to the product and the seller.                                                                                                                                                 |
|           |                                            |                                                                                                   | For buyers, this date may vary from different sellers of the same<br>product and may be dependent on the relationship between trading<br>partners. For example, there could be different values from multiple<br>sellers for the same product to a specific buyer. |
| 1007      | First Order<br>Date/Time                   | The earliest date/time an order will be processed for the product.                                | A seller may provide different dates to buyers. For the buyer, the date is specific to the product and the seller.                                                                                                                                                 |
|           |                                            | p                                                                                                 | For buyers, this date may vary from different sellers of the same<br>product and may be dependent on the relationship between trading<br>partners. # **15 Category Specific Attributes**

This grouping includes a variety of attributes that are specific to product categories or sub-categories within the GDM.

## 15.1 Food

This section includes attributes that relate to the processing and growing methods of a wide range of food products.

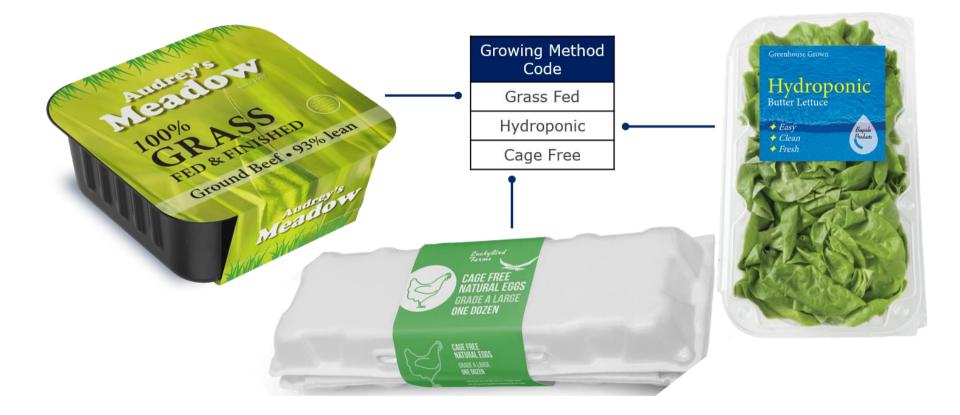

# **15.1.1 Dairy Attributes Example**

### **15.1.2 Growing Method Code Examples**

## **15.1.3 Food Attributes – Business Process Notes**

| BMS<br>ID | ADB Name                        | ADB Business Definition                                                                                                                                                                                                              | Business Process Notes |
|-----------|---------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------|
| 879       | Percent of Milk Fat<br>In Dairy | The percentage of milk fat contained in the milk portion of the dairy product.                                                                                                                                                       | [no additional notes]  |
| 880       | Homogenised<br>Indicator        | The indicator specifying whether or not the milk used is<br>homogenised. The homogenisation of milk is a technical<br>process in the dairy business. The milk fat is milled to such<br>an extent that further creaming is prevented. | [no additional notes]  |
| 1259      | Growing Method<br>Code          | The code indicating how the product has been grown, cultivated, reared and/or raised.                                                                                                                                                | [no additional notes]  |

## 15.2 Fish

This group of attributes is required by EU regulations to describe how and where fish and seafood are caught and stored.

## **15.2.1 Fish Attributes Example**

### **15.2.2 Fish Attributes – Business Process Notes**

The attributes *Fishing Gear Code* (BMS ID 914), *Fish Production Method Code* (BMS ID 915), *Fish Storage State Code* (BMS ID 916) and *Catch Area Code* (BMS ID 6147) may be repeated for the same fish identified by *Fish Scientific Name* (BMS ID 912) when multiple sets of information are needed to describe the fish within a product. In cases where a product consists of multiple types of fish, the entire grouping of attributes (including *Fish Scientific Name*) may be repeated. The attributes Fishing Gear Code (BMS ID 914) and Catch Area Code (BMS ID 6147) may be repeated within the fish catch information when multiple values apply for one catch.

| BMS<br>ID | ADB Name                       | ADB Business Definition                                                                                                       | Business Process Notes                                                                                                                                                                                                                                                                                                                                                                                                      |
|-----------|--------------------------------|-------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 912       | Fish Scientific Name           | The scientific name of fish and seafood products.                                                                             | The Latin name is required per regulation for retail sale in the European region. The EU Regulation 1379/2013 recommends the use of scientific names in accordance with the Fish Base Information System or the ASFIS database of the Food and Agriculture Organization (FAO).                                                                                                                                              |
| 914       | Fishing Gear Code              | The code indicating what type of fishing gear was used to catch fish and seafood.                                             | The first nine codes (01 through 09) provide general groups of gear types. These are frequently sufficient, rather than using the more detailed codes. In Europe, codes 01 – 09 are used to provide mandatory information on the category of fishing gear (e.g., 02 for Seine Nets) while all other codes are only used to provide voluntary additional information (e.g., SB for Beach seines or SSC for Scottish seines). |
| 915       | Fish Production<br>Method Code | The code indicating how the fish and seafood were grown and harvested or caught.                                              | [no additional notes]                                                                                                                                                                                                                                                                                                                                                                                                       |
| 916       | Fish Storage State<br>Code     | The code indicating whether the fish was previously frozen or not.                                                            | [no additional notes]                                                                                                                                                                                                                                                                                                                                                                                                       |
| 6147      | Catch Area Code                | The code indicating the fishing area in which<br>the fish/seafood or the fish/seafood in the<br>product was caught or farmed. | [no additional notes]                                                                                                                                                                                                                                                                                                                                                                                                       |

# 15.3 Fresh Fruits and Vegetables

This section contains the attributes that designate genus and species for fresh fruits and vegetables (and potentially other products), as well as an attribute pertaining to fruit juice.

#### 15.3.1 Genus and Species Attributes Example – Apples and Peppers

In these examples, the two varieties of apples are of the same *Genus* and *Species*, and the four varieties of peppers (packaged together) are of the same *Genus* and *Species*.

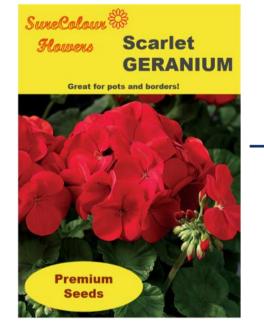

|   | Product Description                                                 | Genus    | Species   |
|---|---------------------------------------------------------------------|----------|-----------|
| • | Fresh Orchards Brand Organic Gala<br>Apples 48 OZ (3 LB) 1,36kg bag | Malus    | domestica |
|   | Fresh Orchards Brand Granny Smith<br>Apples 48 OZ (3 LB) 1,36kg bag | Malus    | domestica |
|   | PepperBest brand 4 Sweet Mixed<br>Peppers                           | Capsicum | annuum    |

## **15.3.2 Genus and Species Attributes Example – Flower Seeds**

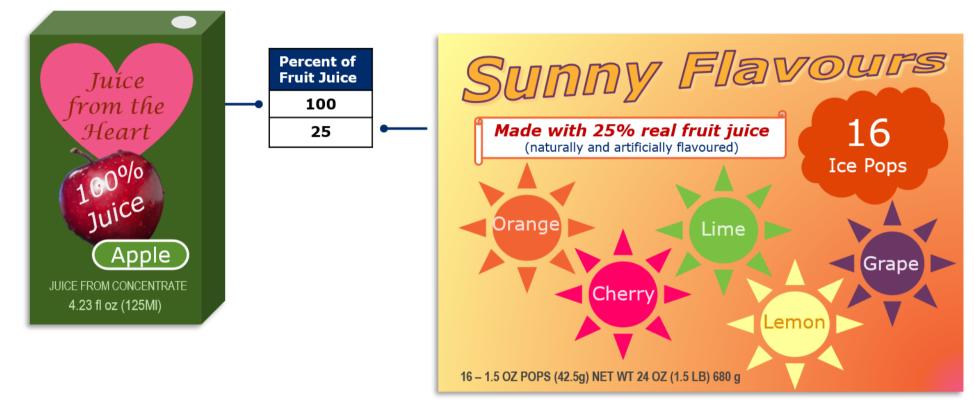

In these examples, the two types of geranium flowers are of the same *Genus* but different *Species*.

| Product Description                                                          | Genus       | Species   |   |
|------------------------------------------------------------------------------|-------------|-----------|---|
| SureColour Flowers Scarlet<br>Geranium Premium Seeds<br>packet               | Pelargonium | inquinans |   |
| SureColour Flowers South<br>African Geranium Rare<br>Seeds Collection packet | Pelargonium | sidoides  | • |

#### 15.3.3 Percent of Fruit Juice Example

#### 15.3.4 Fresh Fruits and Vegetables Attributes – Business Process Notes

| BMS<br>ID | ADB Name               | ADB Business Definition                                                                       | Business Process Notes                                                                                                                                                                                                        |
|-----------|------------------------|-----------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1270      | Percent of Fruit Juice | The percentage of fruit juice contained in the product.                                       | [no additional notes]                                                                                                                                                                                                         |
| 2145      | Genus                  | The scientific name of a category of biological classification immediately above the Species. | [no additional notes]                                                                                                                                                                                                         |
| 2147      | Species                | The scientific name of a category of biological classification below the Genus.               | If the species exists for a specific <i>Genus</i> , then the <i>Species</i> attribute is mandatory. Variety (e.g., Gala apple vs Granny Smith apple) is a classification below Species and is not included in this attribute. |

### 15.4 Pet Food

This group of attributes is used to communicate product information relating to ingredients, nutrients (analytical constituents), additives and feeding instructions for pet food and other animal feed. The values needed for many of these attributes may be dictated by local or regional regulations. It is recommended to refer to local/regional market regulations when developing this information and to your local MO for best practices.

#### 15.4.1 Pet Food Nutrient Chart Example

Code values for the Animal Nutrient Code attribute are found in the GDD code list NutrientTypeCode. These code values are primarily derived from the UN INFOODS tag names, which are frequently encoded in a way that makes direct mapping difficult. (In the example below, "Moisture" in the product analysis panel maps to the code value "WATER" and "Linoleic Acid" maps to "F18D2CN6".) It is recommended to search both the GDD code names and definitions to help identify matching values.

#### **INGREDIENTS:**

Beef, Beef Meal, Lamb Meal, Potatoes, Egg, Sunflower Oil, Buffalo, Lamb, Venison, Beef Cartilage, Natural Flavors, Herring Oil, Apples, Carrots, Garlic, Tomatoes, Vitamins (Vitamin E Supplement, Niacin, d-Calcium Pantothenate, Vitamin A Supplement, Vitamin D Supplement, Beta Carotene, Vitamin B12 Supplement, Biotin, Riboflavin, Pyridoxine Hydrochloride, Thiamine Mononitrate, Folic Acid), Potassium Chloride, Potassium Sulfate, Cottage Cheese, Minerals (Calcium Carbonate, Zinc Proteinate, Iron Proteinate, Copper Proteinate, Manganese Proteinate, Calcium Iodate), Dried Chicory Root, Ascorbic Acid, Direct Fed Microbials (Dried Lactobacillus acidophilus Fermentation Product, Dried Lactobacillus casei Fermentation Product, Dried Bifidobacterium thermophilum Fermentation Product, Dried Enterococcus faecium Fermentation Product), Lecithin, Rosemary Extract.

#### **GUARANTEED ANALYSIS:**

Microorganisms are defined in the **Microbiological Information** class (BMS ID 1396) in the GDD Food And Beverage module. \*The attribute *Animal Nutrient Quantity* shall always be accompanied by a measurement unit code (e.g. "Kilogram", "Kilocalorie").

#### 15.4.2 Pet Food Feeding Chart Example – Using Minimum/Maximum Weight of Animal Being Fed + Minimum/Maximum Feeding Amount

Each set of attributes is repeated for every unique combination of target age and weight range. In this example, the *Feeding Instructions* attribute is used to explain the increased feeding for kittens over 10 lbs.

\*Note: The attributes *Minimum/Maximum Weight of Animal Being Fed* and *Minimum/Maximum Feeding Amount* shall always be accompanied by their measurement unit codes.

#### 15.4.3 Pet Food Feeding Chart Example – Using Maximum Weight of Animal Being Fed + Feeding Amount

Each set of attributes is repeated for every unique combination of target age and weight range. In this example, there is a recommendation for each of the 6 weight groups for ages 2, 4 and 6 months, but there are recommendations for only 5 weight groups at 9 months, 3 weight groups at 12 and 15 months, and 1 weight group at 18 months. Because only a top weight is given, only the *Maximum Weight of Animal Being Fed* is populated.

In this example, the *Feeding Instructions* attribute is used to explain the recommendation for adult dogs outside of the age and weight ranges specified in the chart.

\*Note: The attributes Maximum Weight of Animal Being Fed and Feeding Amount shall always be accompanied by their measurement unit codes.

Note that the majority of these codes are<br>derived from the UN INFOODS tag names. Refer to the <u>GS1</u><br><u>Global Data Dictionary</u> to see the full list of codes; select the<br>code list for GDD code list name <i>NutrientTypeCode</i> . |
| 205       | Animal Nutrient<br>Target Percentage     | The amount of the nutrient or energy element contained in the product as a percentage of Feeding Amount.                                                                         |                                                                                                                                                                                                                                                                                                                                           |
| 206       | Animal Nutrient<br>Maximum<br>Percentage | The highest amount of the nutrient or energy element that the product may contain as a percentage of Feeding Amount.                                                             | This information is gathered from a nutrient analysis of a product.                                                                                                                                                                                                                                                                       |
| 207       | Animal Nutrient<br>Minimum Percentage    | The lowest amount of the nutrient or energy element that the product may contain as a percentage of Feeding Amount.                                                              | Typically, an animal food label will include only one of the<br>attributes Animal Nutrient Target Percentage, Animal Nutrient<br>Maximum Percentage, Animal Nutrient Minimum Percentage or<br>Animal Nutrient Quantity.                                                                                                                   |
| 208       | Animal Nutrient<br>Quantity              | The value, with its unit of measure, that<br>indicates the amount of nutrient or energy<br>element contained in the product as a defined<br>quantity relative to Feeding Amount. |                                                                                                                                                                                                                                                                                                                                           |
| 386       | Nutritional/Health<br>Claim Description  | The information provided by the seller about the product's nutritional/health claims.                                                                                            | In some markets, this is not to be used for marketing claims,<br>but only for legal claims. If this is only for legal claims, then<br>please refer to the <i>Marketing Message</i> attribute for any<br>marketing claims.                                                                                                                 |
| 388       | Pet Food or Animal<br>Feed Type Code     | The code that indicates the type of pet food or<br>animal feed given to wild or domestic animals<br>in the course of animal husbandry.                                           | In the EU, the information related to this code will be found on the package label.                                                                                                                                                                                                                                                       |

| BMS<br>ID | ADB Name                                     | ADB Business Definition                                                                                                                                                                              | Business Process Notes                                                             |
|-----------|----------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------|
| 389       | Animal Feed<br>Designed For Code             | The code that describes the type of animal this feed/animal food is designed to be consumed by.                                                                                                      | This attribute may be repeated if the product is appropriate for multiple animals. |
| 5907      | Feed Additive<br>Statement                   | The list of additives used in animal nutrition for<br>purposes of improving the quality of feed and<br>the quality of food from animal origin, or to<br>improve the animals' performance and health. | This statement is exactly as printed on the label.                                 |
| 5909      | Feed Analytical<br>Constituents<br>Statement | The list of the analytical constituents or<br>guaranteed analysis of the feed, based on the<br>nutrient analysis of the finished product, as<br>governed by local rules and regulations.             | This statement is exactly as printed on the label.                                 |
| 5911      | Feed Composition<br>Statement                | The list of the animal feed composition data,<br>based on the ingredients contained in the feed,<br>as governed by local rules and regulations.                                                      | This statement is exactly as printed on the label.                                 |

#### 15.4.4.2 Feeding Table and Instructions

These attributes (BMS IDs 399, 401, 403, 416, 420, 422 and 424) provide a structured method for communicating feeding instructions displayed as a table on the product packaging (label). However, if the feeding instructions cannot be described via the structured attributes, this information should be provided in the *Feeding Instructions* attribute (BMS ID 5913), which is a free text field. In addition, an image of the feeding table may be provided in the *Product Image URL* attribute (BMS ID 3000).

| BMS<br>ID | ADB Name                         | ADB Business Definition                                                                          | Business Process Notes                                                                                                                                                                                                                            |
|-----------|----------------------------------|--------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 399       | Animal Feed Target<br>Life Stage | The description of the intended life stage of the animal that will consume the feed/animal food. | This may be a general term for an animal's life stage (e.g.<br>"kitten", "senior") or in terms of time (e.g. "6-9 months", "7+<br>years"). This value is frequently shown in feeding tables along<br>with weights, feeding amounts and frequency. |

| BMS<br>ID | ADB Name                              | ADB Business Definition                                                                                                                                                                             | Business Process Notes                                                                                                                                                                                                                                                                                                                                                                               |
|-----------|---------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |                                       |                                                                                                                                                                                                     | Animal Feed Target Life Stage may be repeated for each life<br>stage in the pet food feeding chart. For each iteration, the<br>following associated attributes may also be repeated: BMS IDs<br>401, 403, 416, 420, 422, 424.                                                                                                                                                                        |
| 401       | Maximum Weight Of<br>Animal Being Fed | The highest weight of the animal intended to be fed the product as defined by the manufacturer.                                                                                                     | If the target weight is not a range, refer to the <u>GS1 Trade Item</u><br><u>Implementation Guide</u> section on "Min Max Values".                                                                                                                                                                                                                                                                  |
| 403       | Minimum Weight Of<br>Animal Being Fed | The lowest weight of the animal intended to be fed the product as defined by the manufacturer.                                                                                                      | If the target weight is not a range, refer to the <u>GS1 Trade Item</u><br><u>Implementation Guide</u> section on "Min Max Values"                                                                                                                                                                                                                                                                   |
| 416       | Feeding Amount                        | The amount of feed (with its unit of measure)<br>that is specified on the product label. This may<br>be associated with the feed life-stage and<br>qualified by the weight of the animal being fed. | If this value is specified, do not use the <i>Maximum/Minimum</i><br><i>Feeding Amount</i> attributes.                                                                                                                                                                                                                                                                                               |
| 420       | Maximum Feeding<br>Amount             | The largest amount of product (with its unit of measure) specified for the animal being fed as defined by the manufacturer.                                                                         | If the feeding amount is not stated as a range, use the <i>Feeding Amount</i> attribute.                                                                                                                                                                                                                                                                                                             |
| 422       | Minimum Feeding<br>Amount             | The least amount of product (with its unit of measure) specified for the animal being fed as defined by the manufacturer.                                                                           | If the feeding amount is not stated as a range, use the <i>Feeding Amount</i> attribute.                                                                                                                                                                                                                                                                                                             |
| 424       | Feeding Frequency                     | The recommended frequency to feed an animal<br>the quantity of feed within a time period for<br>the specified feed life-stage.                                                                      | The <i>Feeding Frequency</i> may be different for animals of different weight, ages or life stages.                                                                                                                                                                                                                                                                                                  |
| 5913      | Feeding Instructions                  | The representation of the label describing the amounts and how often the animal should be fed the product as defined by the seller.                                                                 | This attribute is used to describe feeding information that is too<br>complex to be described using the structured representation.<br>(See the examples of the Kitten and Puppy Feeding Charts,<br>above.) If no structured information is supplied, you may use a<br>general statement such as "Your animal's needs for food will<br>vary according to age, weight, breed, sex and activity level." |

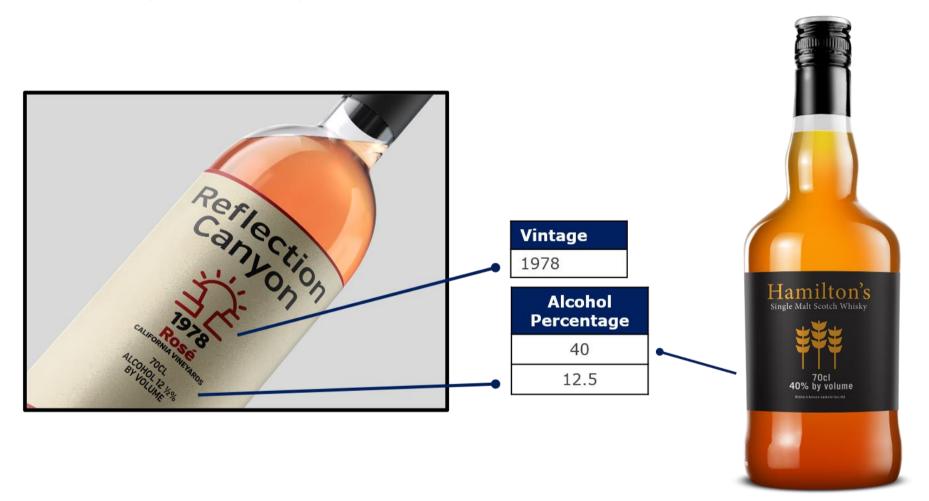

| BMS<br>ID | ADB Name | ADB Business Definition | Business Process Notes                                                                                                                     |
|-----------|----------|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|
|           |          |                         | In cases where the feeding table is complex, best practice is to include an image in the <i>Product Image URL</i> (BMS ID 3000) attribute. |

# **15.5** Alcoholic Beverages

This section includes attributes specifically related to alcoholic beverages.

## **15.5.1** Alcoholic Beverages Attributes Example

# 15.5.2 Alcoholic Beverages Attributes – Business Process Notes

| BMS<br>ID | ADB Name           | ADB Business Definition                                                                                                                                        | Business Process Notes                                                                                                                                                           |
|-----------|--------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 352       | Alcohol Percentage | The percentage of alcohol by volume contained in the product.                                                                                                  | For consumer packs that contain a mix of products with different<br>alcohol percentage, this attribute shall be populated with the highest<br>value.                             |
|           |                    |                                                                                                                                                                | This should be any number from 0.00 to less than 100. For example, in the instance of 10%, provide 10 and not 0.10. There could be values less than 1% (e.g. alcohol free beer). |
|           |                    |                                                                                                                                                                | According to EU regulation, <i>Alcohol Percentage</i> must be specified for all products at or above 1.2% alcohol by volume.                                                     |
|           |                    |                                                                                                                                                                | There are specific GPC bricks available for classifying free-from alcohol products.                                                                                              |
| 357       | Vintage            | The year in which the majority of ingredients are harvested and/or the alcoholic beverage is produced. This definition may be determined by local regulations. | For expression of vintage year, a year would be expressed as 4 digits. The vintage may or may not be marked on the package.                                                      |

### **15.6 Beauty and Personal Care**

This section includes the attribute that describes the Sun Protection Factor (SPF) value of beauty and personal care products.

#### **15.6.1** Sun Protection Factor (SFP) Attribute Example

# **15.6.2** Beauty and Personal Care Attributes – Business Process Notes

| BMS<br>ID | ADB Name                       | ADB Business Definition                                              | Business Process Notes                                                                                                                          |
|-----------|--------------------------------|----------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| 273       | Sun Protection<br>Factor (SPF) | The rating of how well a product will protect the skin from UV rays. | In some areas, this could be required subject to local regulation.<br>For example, in EU countries, the values are restricted by<br>regulation. |

# **16 Glossary of Terms and Abbreviations**

Additional terms can be found in the GS1 Glossary [https://xchange.gs1.org/sites/glossary/en-gb].

| Term/Abbreviation | Definition                                                                                                                                                             |
|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ADB               | GS1 Attribute Definitions for Business standard                                                                                                                        |
| AIG               | GS1 Global Data Model Attribute Implementation Guideline                                                                                                               |
| BMS ID            | GS1 Business Message Standard Identifier                                                                                                                               |
| case              | A logistic unit (e.g. a box) that usually contains a product or packs                                                                                                  |
| data pool         | A repository of data where trading partners can obtain, maintain, validate and exchange information on items and parties in a standard format through electronic means |
| each              | Often used to refer to the consumer unit (i.e. the item that the consumer purchases)                                                                                   |
| GDD               | GS1 Global Data Dictionary                                                                                                                                             |
| GDM               | GS1 Global Data Model                                                                                                                                                  |
| GDSN              | GS1 Global Data Synchronisation Network                                                                                                                                |
| GLN               | Global Location Number                                                                                                                                                 |
| GPC               | GS1 Global Product Classification                                                                                                                                      |
| GS1 GO            | GS1 Global Office                                                                                                                                                      |
| GS1 MO            | GS1 Member Organisation                                                                                                                                                |
| GSMP              | GS1 Global Standards Management Process                                                                                                                                |
| GTIN              | Global Trade Item Number                                                                                                                                               |

| Term/Abbreviation | Definition                                                                                                                                                            |
|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| item              | A generic term often used to refer to the physical object of a logistic packaging hierarchy for the product (e.g., trade item)                                        |
| logistic unit     | An item of any composition established for transport and/or storage that needs to be managed through the supply chain                                                 |
| pack              | A unit hierarchically between the each and the case. This may be a consumer unit (e.g. carton of cigarettes) and/or a logistic unit (e.g. box of cans)                |
| pallet            | A logistic unit that is usually a collection of cases on a wooden platform                                                                                            |
| product           | Usually referring to the consumer unit                                                                                                                                |
| solution provider | An organisation that implements systems for end users that are based upon or implement the GS1 system of standards                                                    |
| target market     | A geographical area (usually a country or region) where a product or service is intended to be sold                                                                   |
| TIIG              | Trade Item Implementation Guideline                                                                                                                                   |
| unit              | A generic term often used to refer to the item in a business activity, sometimes prefixed with the business purpose (e.g. consumer unit, logistic unit, selling unit) |
