

Global Document Type Identifier (GDTI)

The Global Document Type Identifier can be used by companies to identify documents, including the class or type of each document.

- In cases where companies require identification of individual documents, an optional alphanumeric serial number can be included in the GDTI.
- The term “document” is applied broadly to cover any official or private paper that infers a right (a proof of ownership) or obligation (notification or call for military service) upon the bearer, or a diploma or certificate.
- Such documents typically require recording of the appropriate information contained on the document. Examples of the kind of documents that could benefit from a GDTI are physical documents such as certificates, invoices, driving licenses, and electronic documents such as digital images, EDI messages.

- The GDTI can be encoded in a barcode or printed directly on the document. Companies can use the GDTI as a method of identification and registration of documents and related events.
- They can also use the GDTI for information retrieval, document tracking, and electronic archiving.
- One specific application is the prevention of fraud and document falsification; for example, assigning a GDTI to each diploma or certificate that is then linked to a central registry.
