### 1 Business Solution

#### 1.1 Business Domain View

##### 1.1.1 Problem Statement / Business Need

Party is one of the first messages in the trade process. Party is the process of communicating the initial Party data describing the seller, buyer and any third party in a trading relationship. This business process includes communicating Party (supplier, buyer and third party) details such as primary party identification, organizational related details, relationship roles and the Party attributes.

##### 1.1.2 Objective

To supply the detail design of the Party business transaction needed to meet the requirements of the referenced BRAD(s).

##### 1.1.3 Audience

The audience for use of this standard is any participant in the global supply chain. This includes retailers, manufacturers, service providers and other third parties.

##### 1.1.4 Artefacts

Artefact name	State	Artefact / State description

##### 1.1.5 References

Reference Name	Description

Process	Align
System Capabilities	EAN.UCC
Official Constraints	None

### 1.3 Additional Technical Requirements Analysis

#### 1.3.1 Technical Requirements (optional)

Number	Statement	Rationale
	None	

### 1.4 Business Transaction View

#### 1.4.1 Business Transaction Use Case Diagram

None

#### 1.4.2 Use Case Description

Use Case ID	UC-1																								
Use Case Name	Align Data - Party																								
Use Case Description	Party data alignment is the process of communicating Party data attributes following the establishment of a business relationship between seller (supplier), buyer or third party.																								
Actors (Goal)	<p>The two general players in the Party process are the "seller" and the "buyer". Depending on the specific nature of the relationship, other players such as Third Parties, may have a role. The table below summarizes the roles associated with each player in the Party process.</p> <table><tr><th>Actor's Name</th><th>Description</th><th>Buyer</th><th>Seller</th><th>Third Party</th></tr><tr><td>Seller</td><td>Manufacturer or supplier of the item</td><td></td><td>X</td><td>X</td></tr><tr><td>Buyer</td><td>Retailer or distributor of the item</td><td>X</td><td></td><td>X</td></tr><tr><td>Third Party</td><td>Other parties that somehow influence the item and may include creation, distribution, publication, and/or maintenance of the item.</td><td>X</td><td>X</td><td>X</td></tr></table>					Actor's Name	Description	Buyer	Seller	Third Party	Seller	Manufacturer or supplier of the item		X	X	Buyer	Retailer or distributor of the item	X		X	Third Party	Other parties that somehow influence the item and may include creation, distribution, publication, and/or maintenance of the item.	X	X	X
Actor's Name	Description	Buyer	Seller	Third Party																					
Seller	Manufacturer or supplier of the item		X	X																					
Buyer	Retailer or distributor of the item	X		X																					
Third Party	Other parties that somehow influence the item and may include creation, distribution, publication, and/or maintenance of the item.	X	X	X																					
Performance Goals	None																								
Preconditions	The Party process begins when the parties decide to commence business.																								
Post conditions	Once party synchronization has occurred, subsequent transactions like Item and Price data synchronization can occur.																								
Scenario	<p><b>Begins when</b> the initial discussions between the trading partners take place and the need to exchange party organizational information arises.</p> <p><b>Continues with...</b></p> <table><tr><th>Step #</th><th>Actor</th><th>Activity Step</th></tr><tr><td>1</td><td>All</td><td>All preconditions have been met.</td></tr><tr><td>2</td><td>Buyer</td><td>Communicates party data.</td></tr><tr><td>3</td><td>Seller</td><td>All preconditions have been met.</td></tr><tr><td>4</td><td>Seller</td><td>Applies party data or notifies the buyer of any errors in the party data.</td></tr></table>					Step #	Actor	Activity Step	1	All	All preconditions have been met.	2	Buyer	Communicates party data.	3	Seller	All preconditions have been met.	4	Seller	Applies party data or notifies the buyer of any errors in the party data.					
Step #	Actor	Activity Step																							
1	All	All preconditions have been met.																							
2	Buyer	Communicates party data.																							
3	Seller	All preconditions have been met.																							
4	Seller	Applies party data or notifies the buyer of any errors in the party data.																							

## Business Solution Design

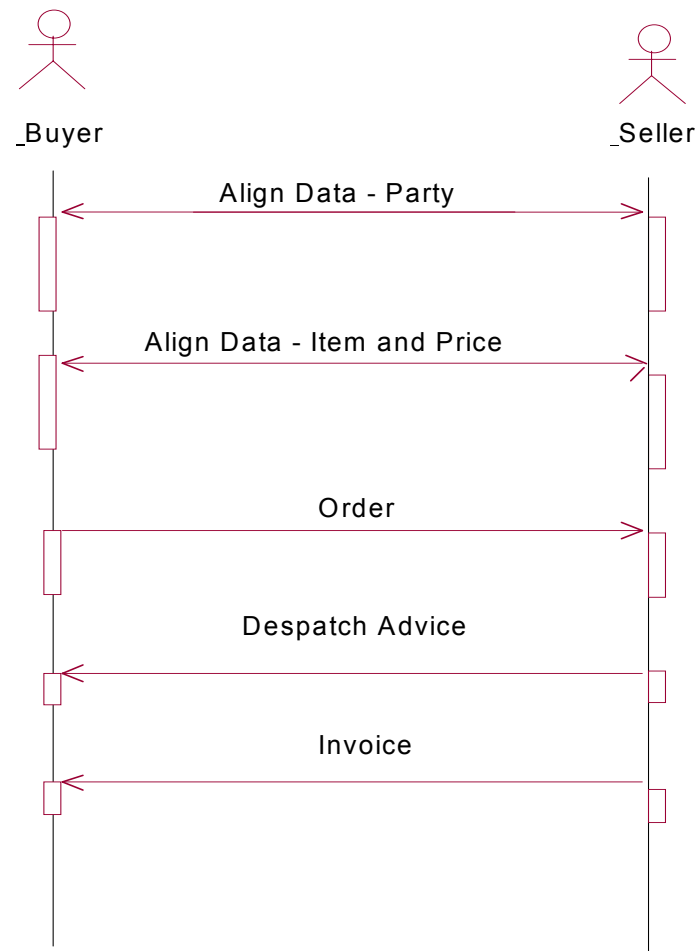

---

	5	Buyer	Applies party data or notifies the seller of any errors in the party data.
	<p>*The third party is not shown in this chart as third party assumes the roles of either buyer or seller.</p> <p><b>Ends when</b> the party data has been accepted by both the seller and buyer, Party data alignment has been achieved. This process can be an ongoing process as party information changes or new parties are added. The process of trading goods and services can now occur.</p>

### 2 XML Technical Solution ITRG Packet

The Technical Representation of the Business process is documented in a Technical Solution ITRG Packet containing all supplemental XML artefacts and is used by the Information Requirements Group (ITRG) to evaluate the solution. Upon approval from the Information Technical Requirements Group (ITRG), the Technical Solution ITRG Packet is updated to the Technical Solution Implementers Packet and published with the Business

Message Standard at:

[http://www.ean-ucc.org/global\\_smp/ean.ucc\\_standards.htm](http://www.ean-ucc.org/global_smp/ean.ucc_standards.htm).

Technical Solution ITRG Packet Content:

- Business Message Standard (BMS)
- ITRG Review Packet
  - Style Sheet: This HTML has been created using a Style Sheet that is a visual representation of the data. It is not an actual Style Sheet, but an ex-ample of what a Style Sheet may look like.
  - Instance File: The Instance File is an example of what the schema may look like when it includes live data. This can be used as comparison to a completed schema and can serve as a point of reference for development.
  - Technical Level GDD Report

Technical Solution Implementers Packet Content:

Contains all the message specific.XSD files required to implement

Example:

- AS2Envelope
- Command.xsd
- DocumentCommand.xsd
- Proxy.xsd
- ComponentLibrary.xsd

Both the Business Message Standard and the Implementers Packet are available during the ITRG Review Period in the working documents section of the ITRG eRoom:

[http://eroom.uncouncil.org/eRoom/facility/InformationTechnicalAssessmentGroupITAG/0\\_14f7](http://eroom.uncouncil.org/eRoom/facility/InformationTechnicalAssessmentGroupITAG/0_14f7)

All documents for review will be in this folder listed by name of the Change Request and Change Request Number. The Business Message Standard is not open for review, but offered as the basis for determining the suitability of the technical solutions.

This eRoom may be accessed by using the following User Name and Password:
