1.1.1 Problem Statement / Business Need

The existing method of communicating at the “case” level information regarding the logistics unit level is being used by a number of major manufacturers in Europe and North America. Continuing to allow this method of communication avoids the unnecessary generation of GTINs that do not meet the definition criteria for a trade item. (This is taken from the change request CR 04-069).

The intention is to provide for both business practices, that is GTIN at the “pallet” level and “case” level, and to transition to the standard of GTIN at “pallet” level. Today there are two prevalent business practices for obtaining information when there is only one standard logistics unit configuration in a target market:

- A. At the logistics unit level when a GTIN is assigned to the logistics unit
- B. At the “case” level when a GTIN is not assigned to the logistics unit

There are additional attributes that need to be added to support this “case” level processing.

If any "GTIN + GLN + TM" in the synchronized hierarchy has tradeitemunitdescriptor = "PL" (pallet) or "MX" (mixed module) then the additional attributes cannot be populated on any "GTIN + GLN + TM" in the synchronized hierarchy.

It can only appear once in a synchronized hierarchy.

If a “case” level GTIN is never shipped as part of a standard logistic unit level then the additional attributes are not applicable. For example a case of lipsticks or nail polish may never be sold or shipped as a full pallet.

1.1.2 Objective

To supply the detail design of the (specific) business transaction needed to meet the requirements of the referenced BRAD(s).

1.1.3 Audience

The audience includes all participants in both the(GDSN) Global Data Synchronization Network and Peer-to-Peer processing of manufacturer and supplier.

	2	<p>If any " GTIN + GLN + TM" in the synchronized hierarchy has tradeitemunitdescriptor = "PL" (pallet) or " MX " (mixed module) then the additional attributes cannot be populated on any "GTIN + GLN + TM" in the synchronized hierarchy.</p> <p>It can only appear once in a synchronized hierarchy.</p> <p>This rule applies to the following attributes:</p>

		<ul style="list-style-type: none"> Logistics Unit gross weight Logistics Unit Depth Logistics Unit Height Logistics Unit Width Logistics Unit Stacking Factor Platform Terms and conditions Platform Type QuantityOfLayersPer Pallet QuantityOfTradeItemsContainedInACompleteLayer
	3.	Logistics unit gross weight must be available when non-GTIN logistic unit shipments are made.
	4.	Logistics unit loading depth must be available when non-GTIN logistic unit shipments are made. Refer to the General Specifications section 6.8.1.2 for the conversion and rounding rules between metric and imperial systems.
	5	Logistics unit loading height must be available when non-GTIN logistic unit shipments are made. Refer to the General Specifications section 6.8.1.2 for the conversion and rounding rules.
	6.	Logistics unit loading width must be available when non-GTIN logistic unit shipments are made. Refer to the General Specifications section 6.8.1.2 for the conversion and rounding rules.
	7.	Logistics unit stacking factor must be available when non-GTIN logistic unit shipments are made.
	8.	Platform Terms and Conditions must be provided when "cases" are shipped on logistic units for which no GTIN is required .
	9.	The value of quantityOfLayersPerPallet must be available when non-GTIN logistic unit shipments are made.
	10.	The value of quantityOfTradeItemsContainedInACompleteLayer must be available when non-GTIN logistic unit shipments are made
	11.	Quantityoftradeitemsperpallet. must be provided when "cases" are shipped on logistic units for which no GTIN is required.
	12.	Quantityoftradeitemspalletlayer must be provided when "cases" are shipped on logistic units for which no GTIN is required.

2 Technical Solution Design

This section provides the specifications for the standards content ITRG approves. It is called the Technical Solution Design (TSD).

The Technical Solution Design contains:

- TSD Zip file Table of Contents
- Business Message Standard Section Technical Level GDD Report
- XSD (XML Schema Documents)
- XML Instance File and HTML Form View (XML and HTML files containing sample data specified in Section 1.6)

In the process of approving the Technical Solution Design, the ITRG will be provided the following artefacts:

- Any relevant Business Requirements Analysis Document (BRAD)
- Any relevant Business Requirements Document (BRD)
- Section 1 of Business Message Standard (Business Solution Design)
- Comment Resolution Template from Technical Public Review
- XML Test Report
- Change Request
- Other informative or reference documents
