1. Introduction

Status

MESSAGE TYPE : OSTENQ

REFERENCE DIRECTORY : D.01B

EANCOM® SUBSET VERSION : 004

Definition

A message from a buyer or buyer's agent which requests a supplier or supplier's agent for information on the current status of a previously sent order(s).

Principles

This message is sent between one buyer (or agent) and one supplier (or agent) and may relate to:

- one type of enquiry;
- one or more purchase orders (ORDERS), cargo/goods handling and movement (HANMOV), or instruction to despatch (INSDES) messages.
- one or more products on one or more orders.

4. Segments Description

UNA - C 1 - Service string advice

The service string advice shall begin with the upper case characters UNA immediately followed by six characters in the order shown below. The same character shall not be used in more than one position of the UNA.

UNB - M 1 - Interchange header

This segment is used to envelope the interchange, as well as to identify both, the party to whom the interchange is sent and the party who has sent the interchange. The principle of the UNB segment is the same as a physical envelope which covers one or more letters or documents, and which details, both the address where delivery is to take place and the address from where the envelope has come.

Order Status Enquiry Heading Section

UNH - M 1 - Message header

This segment is used to head, identify and specify a message.

BGM - M 1 - Beginning of message

This segment is used to indicate the type and function of a message and to transmit the identifying number.

DTM - M 5 - Date/time/period

This segment is used to specify the date of the order status enquiry message.

FTX - C 20 - Free text

This segment is used to provide free form or coded text information related to the entire message.

SG1 - M 25 - **NAD-SG2**

A group of segments identifying the parties with associated information.

NAD - M 1 - Name and address

This segment is used to identify the parties involved in the order status enquiry message. Identification of the buyer, or buyer's agent, and the supplier, or supplier's agent, is mandatory in the order status enquiry message. A logistic service provider may act as an agent for a buyer or a supplier.

SG2 - C 5 - **CTA-COM**

A group of segments giving contact details of the specific person or department within the party identified in the NAD segment.

CTA - M 1 - Contact information

This segment is used to identify departments and/or persons within the party specified in the NAD.

COM - C 5 - Communication contact

This segment is used to identify the communications number and the type of communications used for the person identified in the CTA segment.

Order Status Enquiry Detail Section

SG3 - C 999 - DOC-DTM-SG4

A group of segments providing details of the individual requested order(s).

DOC - M 1 - Document/message details

This segment is used to identify the document(s) for which status information is being requested.

DTM - C 5 - Date/time/period

This segment is used to specify dates relating to the references given in the previous DOC segment.

SG4 - C 200000 - LIN-PIA-IMD-SG5-SG6

A group of segments providing details of the individual requested order(s) lines.

© Copyright GS1 - 7 - Edition 2016 Upd. 2021

4. Segments Description

LIN - M 1	- Line item
	This segment is used to identify a product on an order upon which an enquiry is being made.
PIA - C 25	- Additional product id
	This segment is used to specify additional or substitutional item identification codes such as a buyer's or supplier's item number.
IMD - C 10	- Item description
	This segment is used to further identify the current line item.
SG5 - C 99	- RFF-DTM
D==	A group of segments giving references related to the order line(s) and, where relevant, its dates.
RFF - M 1	- Reference
	This segment is used to identify specific order number(s) which is/are related to the current line item. If required the unique line number from specific orders may also be specified. The segment should only be used if further references to those provided in the DOC segment in group 3 are required.
DTM - C 1	- Date/time/period
	This segment is used to specify dates relating to the references given in the previous RFF segment.
SG6 - C 99	- LOC-DTM-QTY
LOC - M 1	A group of segments used to request the status of only certain delivery of an order line and or the quantity. - Place/location identification
LOC - IVI I	
	This segment is used to identify the place of delivery for the quantity specified in the QTY segment.
DTM - C 5	- Date/time/period
	This segment is used to specify any dates and/or times related to the LOC segment group.
QTY - C 1	- Quantity
	This segment is used to specify quantities related to the current LOC segment group.

Order Status Enquiry Summary Section

UNT - M 1 - Message trailer

This segment is a mandatory UN/EDIFACT segment. It must always be the last segment in the message.

UNZ - M 1 - Interchange trailer

This segment is used to provide the trailer of an interchange.

The Messages

5. Segments Layout

This section describes each segment used in the EANCOM® Order status enquiry message. The original EDIFACT segment layout is listed. The appropriate comments relevant to the EANCOM® subset are indicated.

Notes:

- The segments are presented in the seguence in which they appear in the message. The segment or segment 1. group tag is followed by the (M)andatory / (C)onditional indicator, the maximum number of occurrences and the segment description.
- Reading from left to right, in column one, the data element tags and descriptions are shown, followed by in 2. the second column the EDIFACT status (M or C), the field format, and the picture of the data elements. These first pieces of information constitute the original EDIFACT segment layout.

Following the EDIFACT information, EANCOM® specific information is provided in the third, fourth, and fifth columns. In the third column a status indicator for the use of (C)onditional EDIFACT data elements (see 2.1 through 2.3 below), in the fourth column the restricted indicator (see point 3 on the following page), and in the fifth column notes and code values used for specific data elements in the message.

- 2.1 (M)andatory data elements in EDIFACT segments retain their status in EANCOM®.
- Additionally, there are five types of status for data elements with a (C)onditional EDIFACT status, whether for 2.2 simple, component or composite data elements. These are listed below and can be identified when relevant by the following abbreviations:
- REQUIRED R Indicates that the entity is required and must be sent. - ADVISED Indicates that the entity is advised or recommended. Α - DEPENDENT D Indicates that the entity must be sent in certain conditions, as defined by the relevant explanatory note.
 - OPTIONAL 0 Indicates that the entity is optional and may be sent at the discretion of the user.
 - NOT USED Indicates that the entity is not used and should be omitted. Ν
- 2.3 If a composite is flagged as N, NOT USED, all data elements within that composite will have blank status indicators assigned to them.
- 3. Status indicators detailed in the fourth column which directly relate to the code values detailed in the fifth column may have two values:
 - RESTRICTED A data element marked with an asterisk (*) in the fourth column indicates that the listed codes in column five are the only codes available for use with this data element, in this segment, in this message.
 - OPEN All data elements where coded representation of data is possible and a restricted set of code values is not indicated are open (no asterisk in fourth column). The available codes are listed in the EANCOM® Data Elements and Code Sets Directory. Code values may be given as examples or there may be a note on the format or type of code to be used.
- Different colours are used for the code values in the segment details: restricted codes are in red and open codes in blue.

Segment number: 1

UNA	- C	1 - Service string advice
Function:		

i dilottori.

To define the characters selected for use as delimiters and indicators in the rest of the interchange that follows.

		EDIFACT	GS1	*	Description
UNA1	Component data element separator	M an1	M	*	Used as a separator between component data elements contained within a composite data element (default value: ":")
UNA2	Data element separator	M an1	M	*	Used to separate two simple or composite data elements (default value: "+")
UNA3	Decimal notation	M an1	M	*	Used to indicate the character used for decimal notation (default value:".")
UNA4	Release indicator	M an1	M	*	Used to restore any service character to its original specification (value: "?").
UNA5	Reserved for future use	M an1	M	*	(default value: space)
UNA6	Segment terminator	M an1	М	*	Used to indicate the end of segment data (default value: " ' ")

Segment Notes:

The service string advice shall begin with the upper case characters UNA immediately followed by six characters in the order shown below. The same character shall not be used in more than one position of the UNA. This segment is used to inform the receiver of the interchange that a set of service string characters which are

different to the default characters are being used.

When using the default set of service characters, the UNA segment need not be sent. If it is sent, it must immediately precede the UNB segment and contain the four service string characters (positions UNA1, UNA2, UNA4 and UNA6) selected by the interchange sender.

Regardless of whether or not all of the service string characters are being changed every data element within this segment must be filled, (i.e., if some default values are being used with user defined ones, both the default and user defined values must be specified).

When expressing the service string characters in the UNA segment, it is not necessary to include any element separators.

The use of the UNA segment is required when using a character set other than level A. UNA:+.?'

0032	Communications agreement ID	C an35	0	*	EANCOM
0035	Test indicator	C n1	0		1 = Interchange is a test

Segment Notes:

This segment is used to envelope the interchange, as well as to identify both, the party to whom the interchange is sent and the party who has sent the interchange. The principle of the UNB segment is the same as a physical envelope which covers one or more letters or documents, and which details, both the address where delivery is to take place and the address from where the envelope has come.

© Copyright GS1 - 11 - Edition 2016 Upd. 2021

Segment number: 2

due to syntax errors.

S001: The character encoding specified in basic code table of ISO/IEC 646 (7-bit coded character set for information interchange) shall be used for the interchange service string advice (if used) and up to and including the composite data element S001 'Syntax identifier' in the interchange header. The character repertoire used for the characters in an interchange shall be identified from the code value of data element 0001 in S001 'Syntax identifier' in the interchange header. The character repertoire identified does not apply to objects and/or encrypted data.

The default encoding technique for a particular repertoire shall be the encoding technique defined by its associated character set specification.

DE 0001: The recommended (default) character set for use in EANCOM® for international exchanges is character set A (UNOA). Should users wish to use character sets other than A, an agreement on which set to use should be reached on a bilateral basis before communications begin.

DE 0004, 0008, 0010, 0014, 0042 and 0046: Within EANCOM® the use of the Global Location Number (GLN) is recommended for the identification of the interchange sender and recipient.

DE 0008: Identification (e.g. a division) specified by the sender of the interchange, to be included if agreed, by the recipient in response interchanges, to facilitate internal routing.

DE 0042: Sub-level of sender internal identification, when further sub-level identification is required.

DE 0014: The address for routing, provided beforehand by the interchange recipient, is used by the interchange sender to inform the recipient of the internal address, within the latter's systems, to which the interchange should be routed. It is recommended that the GLN be used for this purpose.

DE 0007: Identification (e.g. a division) specified by the recipient of the interchange, to be included if agreed, by the sender in response interchanges, to facilitate internal routing.

DE 0046: Sub-level of recipient internal identification, when further sub-level identification is required.

DE S004: The date and time specified in this composite should be the date and time at which the interchange sender prepared the interchange. This date and time may not necessarily be the same as the date and time of contained messages.

DE 0020: The interchange control reference number is generated by the interchange sender and is used to identify uniquely each interchange. Should the interchange sender wish to re-use interchange control reference numbers, it is recommended that each number be preserved for at least a period of three months before being re-used. In order to guarantee uniqueness, the interchange control reference number should always be linked to the interchange sender's identification (DE 0004).

DE S005: The use of passwords must first be agreed bilaterally by the parties exchanging the interchange. DE 0026: This data element is used to identify the application, on the interchange recipient's system, to which the interchange is directed. This data element may only be used if the interchange contains only one type of message, (e.g. only invoices). The reference used in this data element is assigned by the interchange sender. DE 0031: This data element is used to indicate whether an acknowledgement to the interchange is required. The EANCOM® APERAK or CONTRL message should be used to provide acknowledgement of interchange receipt. In addition, the EANCOM® CONTRL message may be used to indicate when an interchange has been rejected

DE 0032: This data element is used to identify any underlying agreements which control the exchange of data. Within EANCOM®, the identity of such agreements must start with the letters 'EANCOM', the remaining characters within the data element being filled according to bilateral agreements.

Segment number: 6

FTX	- C	20 - Free text	
Eunction:			

Function:

To provide free form or coded text information.

		EDIFACT	GS1	*	Description
4451	Text subject code qualifier	M an3	M		AAI = General information ZZZ = Mutually defined
4453	Free text function code	C an3	0	*	1 = Text for subsequent use
C107	TEXT REFERENCE	С	D		This composite is only used when trading partners have agreed to use mutually defined code values.
4441	Free text value code	M an17	M		001 = Reference to standard text between trading partners.
1131	Code list identification code	C an17	0		
3055	Code list responsible agency code	C an3	D		91 = Assigned by supplier or supplier's agent92 = Assigned by buyer or buyer's agent
C108	TEXT LITERAL	С	D		
4440	Free text value	M an512	M		
4440	Free text value	C an512	0		
4440	Free text value	C an512	0		
4440	Free text value	C an512	0		
4440	Free text value	C an512	0		
3453	Language name code	C an3	0		ISO 639 two alpha code This data element is only used when non coded free text has been provided in data element C108.
4447	Free text format code	C an3	N		

Segment Notes:

This segment is used to provide free form or coded text information related to the entire message.

Use of this segment in free form is not recommended since in most cases it inhibits automatic processing of the order status enquiry message.

Coded references to standard texts is an available functionality which enables automatic processing and reduces transmission and processing overheads. Standard texts should be mutually defined among trading partners and can be used to cover legal and other requirements.

Example:

FTX+AAI++001::91'

(E.g. General information standard text code 001 = Non delivery of order by latest date will lead to automatic order cancellation.)

5. Segments Layout

Segment number: 11

SG3	- C	999 - DOC-DTM-SG4
DTM	- C	5 - Date/time/period

Function:

To specify date, and/or time, or period.

		EDIFACT	GS1	*	Description
C507	DATE/TIME/PERIOD	М	M		
2005	Date or time or period function code qualifier	M an3	M	*	137 = Document/message date/time
2380	Date or time or period value	C an35	R		
2379	Date or time or period format code	C an3	R		102 = CCYYMMDD 203 = CCYYMMDDHHMM

Segment Notes:

This segment is used to specify dates relating to the references given in the previous DOC segment.

Example:

DTM+137:20020804:102'

© Copyright GS1 - 22 - Edition 2016 Upd. 2021

Segment number: 12

SG3 - C 999 - DOC-DTM-SG4
SG4 - C 200000 - LIN-PIA-IMD-SG5-SG6
LIN - M 1 - Line item

Function:

To identify a line item and configuration.

		EDIFACT	GS1	*	Description
1082	Line item identifier	C an6	R		Application generated number of the item lines within the order status enquiry message.
1229	Action request/notification description code	C an3	N		
C212	ITEM NUMBER IDENTIFICATION	С	D		This composite is only used for the identification of GS1 codes. If another coding structure is required, e. g., HIBC, this composite will not be used and the code will be detailed in the PIA segment.
7140	Item identifier	C an35	R		Format n14 GTIN
7143	Item type identification code	C an3	R	*	SRV = GS1 Global Trade Item Number
1131	Code list identification code	C an17	N		
3055	Code list responsible agency code	C an3	N		
C829	SUB-LINE INFORMATION	С	D		
5495	Sub-line indicator code	C an3	R	*	1 = Sub-line information
1082	Line item identifier	C an6	R		
1222	Configuration level number	C n2	N		
7083	Configuration operation code	C an3	N		

Segment Notes:

This segment is used to identify a product on an order upon which an enquiry is being made. If Global Trade Item Numbers are available it is mandatory to use GTIN within the LIN segment.

Note on DE 1082:

Numbering rule: In Part I, section 4.10 there is the recommendation "Within EANCOM® it is recommended that the line numbers used in the first occurrence of data element 1082 in the LIN segment be sequential, starting at 1 for each new message."

Note on DE 7140:

Only the following significant digits are possible:

- 8 digits for GTIN 8 codes
- 12 digits for GTIN 12 codes
- 13 digits for GTIN 13 codes
- 14 digits for GTIN 14 codes

Dependency Note:

C829 is only used when sub-lines are required.

FOR A COMPLETE DESCRIPTION ON THE USAGE OF SUB-LINES PLEASE REFER TO PART I, SECTION 4.10.

7140	Item identifier	C an35	R		
7143	Item type identification code	C an3	R		
1131	Code list identification code	C an17	0		
3055	Code list responsible agency code	C an3	D		

Segment number: 13

		EDIFACT	GS1	*	Description
C212	ITEM NUMBER IDENTIFICATION	С	0		
7140	Item identifier	C an35	R		
7143	Item type identification code	C an3	R		
1131	Code list identification code	C an17	0		
3055	Code list responsible agency code	C an3	D		
C212	ITEM NUMBER IDENTIFICATION	С	0		
7140	Item identifier	C an35	R		
7143	Item type identification code	C an3	R		
1131	Code list identification code	C an17	0		
3055	Code list responsible agency code	C an3	D		

Segment Notes:

This segment is used to specify additional or substitutional item identification codes such as a buyer's or supplier's item number.

Examples:

PIA+1+ABC5343:MF'

In this example the PIA segment is used to provide an additional identification to the GTIN provided in the LIN segment. The GTIN 4000862141404 provided in the LIN segment refers to the manufacturers article number ABC5343.

PIA+5+2209953C001L:AC'

This example details the HIBC code 2209953C001L which is provided as the primary product code because no GTIN was provided in the LIN segment.
