#### 1. Introduction

Status				
MESSAGE TYPE	: REQOTE			
REFERENCE DIRECTORY	: D.01B			
EANCOM <sup>®</sup> SUBSET VERSION	: 004			

#### Definition

A message which provides potential buyers with the ability to solicit price, delivery schedule, and other conditions from potential sellers of goods or services.

#### **Principles**

The following general principles apply to the EANCOM® Request for Quote message:

- A potential buyer may solicit offers for one or more goods items or services.
- A request for quote may refer to goods items or services related to one or more delivery schedules, calloffs, etc.
- A request for quote for cross border transactions may contain additional information for customs and/or statistical purposes.

### 3. Branching Diagram

51

UNA - C 1	- Service string advice
	This segment is used to inform the receiver of the interchange that a set of service string characters which are different to the default characters are being used.
UNB - M 1	- Interchange header
	This segment is used to envelope the interchange, as well as to identify both, the party to whom the interchange is sent and the party who has sent the interchange. The principle of the UNB segment is the same as a physical envelope which covers one or more letters or documents, and which details, both the address where delivery is to take place and the address from where the envelope has come.

#### **Request For Quote Heading Section**

UNH - I	М	1 .	· Message header
			This message is used to head, identify and specify a message.
BGM - I	М	1 .	- Beginning of message
			This segment is used to indicate the type and function of a message and to transmit the identifying number.
DTM - I	М	35 -	· Date/time/period
			This segment is used to specify the date of the request for quote.
FTX - (	С	99 -	· Free text
			This segment is used to provide any free text information related to the complete request for quote.
SG1 - (	С	9999 -	· RFF-DTM
			A group of segments for giving references and where necessary, their dates, relating to the whole message, e.g. contract number, import/export license number, reservation number.
RFF - I	M	1 ·	Reference
			This segment is used to provide or request references which relate to the complete request for quotes message, for example, contract numbers, price list numbers, etc. The references given at this point are valid for the whole document unless superseded by references at line level when the same qualifier is used.
DTM - (	С	5.	· Date/time/period
			This segment is used to specify dates relating to the references given in the previous RFF segment.
SG4 - (	С	5.	· CUX-DTM
CUX - I	M	1 -	A group of segments specifying the currencies and related dates/times/period valid for the whole request for quotation. • Currencies
			This segment is used to specify the currency information relevant to the complete request for quote message.
DTM - (	С	5.	· Date/time/period
			This segment is used to specify dates related to the rate of exchange.
SG5 - (	С	10 -	PAT-DTM
PAT - I	М	1 -	A group of segments specifying the terms of payment applicable for the whole order. • Payment terms basis
			This segment is used to request information regarding the payment terms which apply to the complete Request for Quote.
DTM - 0	С	5.	Date/time/period
			This segment is used to specify any dates associated with the payment terms.

<b>SG6</b> - C	10	- TOD-LOC
TOD - M	1	A group of segments indicating the terms of delivery for the whole order. - Terms of delivery or transport
		This segment is used to request information regarding the terms of delivery for the Request for Quote.
LOC - C	2	- Place/location identification
		This segment is used to specify the location to which the terms of delivery apply.
<b>SG11</b> - C	99	- NAD-SG12-SG14
NAD - M	1	A group of segments identifying the parties with associated information. - Name and address
		This segment is used to identify the trading partners involved in the Request for Quote process. Identification of the buyer and supplier of goods and services is mandatory in the Request for Quote using DE's 3035 and C082. Additionally, the delivery party may be specified if different from the buyer.
<b>SG12</b> - C	99	- RFF
		A group of segments giving references only relevant to the specified party rather than the whole message.
RFF - M	1	- Reference
		This segment is used to specify references related to the party identified in the previous NAD segment.
<b>SG14</b> - C	5	- CTA-COM
CTA - M	1	A group of segments giving contact details of the specific person or department within the party identified in the NAD segment. - Contact information
	I	This segment is used to identify the contact department and/or person within the
	_	party specified in the NAD segment.
COM - C	5	- Communication contact
		This segment identifies the communications number, and type of communications, for the person or department identified in the previous CTA segment.
<b>SG15</b> - C	10	- TDT
		A group of segments identifying the mode and means of transport relating to the whole order.
TDT - M	1	- Details of transport
		This segment is used to request information on the means of transport which will be used to deliver the products for the entire message.
Request I	For Quote D	etail Section
<b>SG27</b> - M	200000	- LIN-PIA-IMD-MEA-QTY-ALI-DTM-FTX-SG29-SG31-SG32-SG33-SG34-SG39- SG46-SG52-SG54
LIN - M	1	A group of segments providing details of the individual requested items. There must be at least one occurrence of Segment group 27 within an request for quote. This Segment group may be repeated to give subline details. - Line item
		This segment is used to identify the line item for which a request for quote is being made.

PIA - C 25 - Additional product id This segment is used to specify additional or substitutional item identification codes such as a buyer's or seller's item number.

IMD - C	99	- Item description
		This segment is used to describe the current line item.
MEA - C	5	- Measurements
		This segment is used to indicate measurements or limitations of the current line item.
QTY - C	99	- Quantity
		This segment is used to indicate quantities related to the current line item.
ALI - C	5	- Additional information
		This segment is used to indicate special conditions or the country of origin of the current line item.
DTM - C	35	- Date/time/period
		This segment is used to request information on dates relating to the current line item such as availability dates, manufacturing dates, or lead times.
FTX - C	99	- Free text
		This segment is used to provide any free text information related to the current line item.
<b>SG29</b> - C	100	- MOA
MOA - M	1	A group of segments to allow request of cost breakdown information such as tooling cost, material or overhead cost. - Monetary amount
MOX M		This segment is used to indicate net amounts for the line item for which a quote is
		requested.
<b>SG31</b> - C	99	- PRI
		A group of segments identifying the relevant pricing information for the goods or services ordered.
PRI - M	1	- Price details
<b>SG32</b> - C	9999	This segment is used to specify pricing information relevant to the current line item. - <b>RFF-DTM</b>
		A group of segments giving references and where necessary, their dates, relating to the line item.
RFF - M	1	- Reference
		This segment is used to provide or request references which are applicable to the current line item only.
DTM - C	5	- Date/time/period
		This segment is used to request information on dates and times associated with the previous RFF segment.
<b>SG33</b> - C	999	- LOC-QTY-DTM
		A group of segments specifying destination and quantity details for consignments involving multidestination deliveries.
LOC - M	1	- Place/location identification
		This segment is used to identify the location of delivery for a split delivery order.
QTY - C	1	- Quantity
		This segment is used to indicate the delivery quantity for the delivery location specified in the previous LOC segment. The total of all quantities specified in segment group 33 for the line, must equal the value for the total quantity detailed in the QTY segment at line level.
DTM - C	5	- Date/time/period
		This segment is used to indicate the date, time or period on which the split delivery will take place to the location identified in the LOC segment.

<b>SG34</b> - C	10 -	- TAX
		A group of segments specifying tax related information.
TAX - M	1 -	- Duty/tax/fee details
		This segment is used to request information on the type and rate of tax that is applicable for the current line item.
<b>SG39</b> - C	99 -	- PAC
PAC - M	1 .	A group of segments identifying the packaging for goods referenced in the line item. - Package
		This segment is used to request information on the type of packaging being used for the current line item.
<b>SG46</b> - C	99 -	- ALC-SG47-SG48-SG49-SG50-SG51
		A group of segments specifying allowances and charges for the line items.
ALC - M	1 -	- Allowance or charge
		This segment is used to request information on allowances or charges which are applicable to the current line item.
<b>SG47</b> - C	1 ·	- QTY-RNG
		A group of segments specifying the quantity of the allowance or charge with its measure unit specifier. A range to which the allowance or charge applies may be specified e.g. An allowance of a free quantity of 20 pieces may be specified if the goods quantity is greater than 1000 pieces.
QTY - M	1 -	- Quantity
		This segment is used to specify quantity allowances or charges information for the current line item.
RNG - C	1 -	- Range details
		This segment is used to indicate ranges which must be satisfied before which the quantity allowance or charge becomes effective.
<b>SG48</b> - C	1 -	- PCD-RNG
		A group of segments specifying the percentage for the allowance or charge, e.g. The allowance/charge amount is calculated as 5% of the goods value or a price reduction of 5% may be specified if the goods quantity is within the range 5 tons to 10 tons.
PCD - M	1 .	- Percentage details
		This segment is used to specify percentage allowances or charges information for the current line item.
RNG - C	1 -	- Range details
		This segment is used to indicate ranges which must be satisfied before which the percentage allowance or charge becomes effective.
<b>SG49</b> - C	2 ·	- MOA-RNG
		A group of segments specifying a monetary amount for an allowance or charge. A range to which the allowance or charge applies can be specified, e.g. an allowance of EUR 5000 may be specified if goods value is greater than EUR 100000.
MOA - M	1 ·	- Monetary amount
		This segment is used to specify monetary value allowances or charges information for the current line item.
RNG - C	1 ·	- Range details
		This segment is used to indicate ranges which must be satisfied before which the monetary allowance or charge becomes effective.
<b>SG50</b> - C	1 ·	- RTE-RNG
		A group of segments specifying the rate per unit and basis to which the allowance or charge applies, e.g. The allowance/charge amount is EUR 3 per 10 tons.

RTE - M	1	- Rate details
		This segment is used to specify rate allowances or charges for the line item being quoted.
RNG - C	1	- Range details
		This segment is used to indicate ranges which must be satisfied before which the rate allowance or charge becomes effective.
<b>SG51</b> - C	5	- TAX-MOA
TAX - M	1	A group of segments specifying tax related information for the allowance or charge. - Duty/tax/fee details
		This segment is used to indicate any taxes which may be applicable against the allowances and/or charges information specified in the ALC segment group.
MOA - C	1	- Monetary amount
		This segment is used to specify in monetary terms the amount of tax due for the allowances or charges for the current line item.
<b>SG52</b> - C	10	- TDT
TDT - M	1	A group of segments identifying the mode and means of transport, relating to the line item, where this is different to or not specified within the heading section. - Details of transport
		This segment is used to request information on the means of transport which will be used to deliver the current line item.
<b>SG54</b> - C	100	- SCC-SG55
		A group of segments specifying requested delivery schedules relating to quantities, frequencies, and dates, required for the line item, where this is different to or not specified within the heading section.
SCC - M	1	- Scheduling conditions
		This segment is used to request information on delivery schedules for the current line item.
<b>SG55</b> - C	10	- QTY-DTM
QTY - M	4	A group of segments to specify the scheduled quantities, date/time details of the schedule and where required the reference of the schedule.
	I	- Quantity This segment is used to request information on quantities for the current delivery
DTM - C	5	<ul> <li>- Date/time/period</li> </ul>
	0	This segment is used to indicate dates related to the quantities in the delivery
		schedule.
Request I	For Quote S	ummary Section
UNS - M	1	- Section control
		This segment is used to separate the detail and summary sections of the request for quote message.
MOA - C	15	- Monetary amount
		This segment is used to indicate total monetary amounts applicable to the complete request for quote, e.g. total value allowance and charges, total taxable amount, etc.
CNT - C	10	- Control total
		This segment is used to provide message control totals.
UNT - M	1	- Message trailer
		This segment is a mandatory UN/EDIFACT segment. It must always be the last segment in the message.

UNZ - M 1 - Interchange trailer

This segment is used to provide the trailer of an interchange.

This section describes each segment used in the EANCOM<sup>®</sup> Request for quote message. The original EDIFACT segment layout is listed. The appropriate comments relevant to the EANCOM<sup>®</sup> subset are indicated.

#### Notes:

- 1. The segments are presented in the sequence in which they appear in the message. The segment or segment group tag is followed by the (M)andatory / (C)onditional indicator, the maximum number of occurrences and the segment description.
- 2. Reading from left to right, in column one, the data element tags and descriptions are shown, followed by in the second column the EDIFACT status (M or C), the field format, and the picture of the data elements. These first pieces of information constitute the original EDIFACT segment layout.

Following the EDIFACT information, EANCOM<sup>®</sup> specific information is provided in the third, fourth, and fifth columns. In the third column a status indicator for the use of (C)onditional EDIFACT data elements (see 2.1 through 2.3 below), in the fourth column the restricted indicator (see point 3 on the following page), and in the fifth column notes and code values used for specific data elements in the message.

- 2.1 (M)andatory data elements in EDIFACT segments retain their status in EANCOM<sup>®</sup>.
- 2.2 Additionally, there are five types of status for data elements with a (C)onditional EDIFACT status, whether for simple, component or composite data elements. These are listed below and can be identified when relevant by the following abbreviations:

- REQUIRED	R	Indicates that the entity is required and must be sent.
- ADVISED	Α	Indicates that the entity is advised or recommended.
- DEPENDENT	D	Indicates that the entity must be sent in certain conditions, as defined by the relevant explanatory note.
- OPTIONAL	0	Indicates that the entity is optional and may be sent at the discretion of the user.
- NOT USED	Ν	Indicates that the entity is not used and should be omitted.

- 2.3 If a composite is flagged as **N**, **NOT USED**, all data elements within that composite will have blank status indicators assigned to them.
- 3. Status indicators detailed in the fourth column which directly relate to the code values detailed in the fifth **column** may have two values:

- RESTRICTED	*	A data element marked with an asterisk (*) in the fourth column indicates that the listed codes in column five are the only codes available for use with this data element, in this segment, in this message.
- OPEN		All data elements where coded representation of data is possible and a restricted set of code values is not indicated are open (no asterisk in fourth column). The available codes are listed in the EANCOM <sup>®</sup> Data Elements and Code Sets Directory. Code values

4. Different colours are used for the code values in the segment details: restricted codes are in red and open codes in blue.

or type of code to be used.

may be given as examples or there may be a note on the format

Segment number: 1

UNA	- C	1 - Service string advice	

Function:

The service string advice shall begin with the upper case characters UNA immediately followed by six characters in the order shown below. The space character shall not be used in positions 010, 020, 040, 050 or 060. The same character shall not be used in more than one position of the UNA.

		EDIFACT	GS1	*	Description
UNA1	Component data element separator	M an1	М	*	Used as a separator between component data elements contained within a composite data element (default value: ":")
UNA2	Data element separator	M an1	М	*	Used to separate two simple or composite data elements (default value: "+")
UNA3	Decimal mark	M an1	М	*	Used to indicate the character used for decimal notation (default value:".")
UNA4	Release character	M an1	М	*	Used to restore any service character to its original specification (value: "?").
UNA5	Repetition separator	M an1	М	*	Used to indicate the character used for repetition separation (value: " * " ).
UNA6	Segment terminator	M an1	М	*	Used to indicate the end of segment data (default value: " ' ")

Segment Notes:

This segment is used to inform the receiver of the interchange that a set of service string characters which are different to the default characters are being used.

When using the default set of service characters, the UNA segment need not be sent. If it is sent, it must immediately precede the UNB segment and contain the four service string characters (positions UNA1, UNA2, UNA4 and UNA6) selected by the interchange sender.

Regardless of whether or not all of the service string characters are being changed every data element within this segment must be filled, (i.e., if some default values are being used with user defined ones, both the default and user defined values must be specified).

When expressing the service string characters in the UNA segment, it is not necessary to include any element separators.

The use of the UNA segment is required when using a character set other than level A. UNA:+.?\*'

Segment number: 2

		A Literal contractions for	
UNB	- M	<ol> <li>Interchange header</li> </ol>	

Function:

To identify an interchange.

Notes:

1. S001/0002, shall be '4' to indicate this version of the syntax.

2. The combination of the values carried in data elements S002, S003 and 0020 shall be used to identify uniquely the interchange, for the purpose of acknowledgement.

0022	Recipient reference/password	M an14	М		
0025	Recipient reference/password qualifier	C an2	0		
0026	Application reference	C an14	0		Message identification if the interchange contains only one type of message.
0029	Processing priority code	C a1	0		A = Highest priority
0031	Acknowledgement request	C n1	0		1 = Requested
0032	Interchange agreement identifier	C an35	0	*	EANCOM
0035	Test indicator	C n1	0		1 = Interchange is a test

Segment Notes:

This segment is used to envelope the interchange, as well as to identify both, the party to whom the interchange is sent and the party who has sent the interchange. The principle of the UNB segment is the same as a physical envelope which covers one or more letters or documents, and which details, both the address where delivery is to take place and the address from where the envelope has come.

S001: The character encoding specified in basic code table of ISO/IEC 646 (7-bit coded character set for information interchange) shall be used for the interchange service string advice (if used) and up to and including the composite data element S001 'Syntax identifier' in the interchange header. The character repertoire used for the characters in an interchange shall be identified from the code value of data element 0001 in S001 'Syntax identifier' in the interchange not apply to objects and/or encrypted data.

The default encoding technique for a particular repertoire shall be the encoding technique defined by its associated character set specification.

DE 0001: The recommended (default) character set for use in EANCOM® for international exchanges is character set A (UNOA). Should users wish to use character sets other than A, an agreement on which set to use should be reached on a bilateral basis before communications begin.

DE 0004, 0008, 0010 and 0014: Within EANCOM® the use of the Global Location Number (GLN) is recommended for the identification of the interchange sender and recipient.

DE 0008: Identification (e.g. a division) specified by the sender of the interchange, to be included if agreed, by the recipient in response interchanges, to facilitate internal routing.

DE 0014: The address for routing, provided beforehand by the interchange recipient, is used by the interchange sender to inform the recipient of the internal address, within the latter's systems, to which the interchange should be routed. It is recommended that the GLN be used for this purpose.

DE 0007: Identification (e.g. a division) specified by the recipient of the interchange, to be included if agreed, by the sender in response interchanges, to facilitate internal routing.

DE S004: The date and time specified in this composite should be the date and time at which the interchange sender prepared the interchange. This date and time may not necessarily be the same as the date and time of contained messages.

DE 0020: The interchange control reference number is generated by the interchange sender and is used to identify uniquely each interchange. Should the interchange sender wish to re-use interchange control reference numbers, it is recommended that each number be preserved for at least a period of three months before being re-used. In order to guarantee uniqueness, the interchange control reference number should always be linked to the interchange sender's identification (DE 0004).

DE S005: The use of passwords must first be agreed bilaterally by the parties exchanging the interchange. DE 0026: This data element is used to identify the application, on the interchange recipient's system, to which the interchange is directed. This data element may only be used if the interchange contains only one type of message, (e.g. only invoices). The reference used in this data element is assigned by the interchange sender. DE 0031: This data element is used to indicate whether an acknowledgement to the interchange is required. The EANCOM® APERAK or CONTRL message should be used to provide acknowledgement of interchange receipt. In addition, the EANCOM® CONTRL message may be used to indicate when an interchange has been rejected

## Segment number: 2

due to syntax errors.

DE 0032: This data element is used to identify any underlying agreements which control the exchange of data. Within EANCOM®, the identity of such agreements must start with the letters 'EANCOM', the remaining characters within the data element being filled according to bilateral agreements.

UNB+UNOC:4+5412345678908:14+8798765432106:14+20020102:1000+12345555+++++EANCOMREF 52'

Segment number: 3

UNH	- M	1 - Message header	

Function:

To head, identify and specify a message.

Notes:

1. Data element S009/0057 is retained for upward compatibility. The use of S016 and/or S017 is encouraged in preference.

2. The combination of the values carried in data elements 0062 and S009 shall be used to identify uniquely the message within its group (if used) or if not used, within its interchange, for the purpose of acknowledgement.

		EDIFACT	GS1	*	Description
0062	Message reference number	M an14	м		Senders unique message reference. Sequence number of the messages in the interchange. DE 0062 in the UNT will be exactly the same. Sender generated.
S009	MESSAGE IDENTIFIER	М	М		
0065	Message type	Man6	М	*	REQOTE = Request for quote message

4440	Free text value	M an512	М		
4440	Free text value	C an512	0		
4440	Free text value	C an512	0		
4440	Free text value	C an512	0		
4440	Free text value	C an512	0		
3453	Language name code	C an3	D		ISO 639 two alpha code This data element is only used when non coded free text has been provided in data element C108.
4447	Free text format code	C an3	Ν		

Segment Notes:

This segment is used to provide any free text information related to the complete request for quote. Use of this segment in free form is not recommended since it may inhibit automatic processing of the Request for Quote. Coded references to standard texts is an available functionality which enables automatic processing and reduces transmission and processing overheads. Standard texts should be mutually defined among trading partners and can be used to cover legal and other requirements.

Example:

FTX+ZZZ+1+001::91'

'Standard text 001 = This request for quote is valid for 20 days following date of message'

#### 5. Segments Layout

SG1	- C 9999 - RFF-DTM							
RFF	RFF - M 1 - Reference							
Function:								
To specify a reference.								
		EDIFACT	GS1	*	Description			
C506	REFERENCE	М	М					
1153	Reference code qualifier	Man3	м		CR = Customer reference number CT = Contract number PL = Price list number PR = Price quote number

6345	Currency identification code	C an3	R		ISO 4217 three alpha code
6343	Currency type code qualifier	C an3	R	*	4 = Invoicing currency 9 = Order currency 10 = Pricing currency 11 = Payment currency
6348	Currency rate value	C n4	0		
5402	Currency exchange rate	C n12	D		The rate of exchange is only used if a target currency has been identified in the second occurrence of C504
6341	Exchange rate currency market identifier	C an3	Ν		

Segment Notes:

This segment is used to specify the currency information relevant to the complete request for quote message. The CUX segment is mandatory for international exchanges.

When specifying Reference and Target Currencies for international trade, one occurrence of CUX is all that is required. The reference currency is identified in the first occurrence of composite C504, with the target currency specified in the second occurrence of C504. The rate of exchange between the two is specified in DE 5402. The general rule for calculating the rate of exchange is as follows : Reference Currency multiplied by Rate = Target Currency

Example: CUX+2:EUR:12' CUX+2:EUR:12+3:USD:11+0.90243'

<b>SG4</b> - C 5 - CUX-DTM

1222	Configuration operation code	C an3	N	İ					

If Global Trade Item Numbers are available it is mandatory to use GTIN within the LIN segment.

The detail section of the Request for Quote message is formed by a repeating group of segments always starting with the LIN segment.

#### Note on DE 1082:

Numbering rule: In Part I, section 4.10 there is the recommendation "Within EANCOM® it is recommended that the line numbers used in the first occurrence of data element 1082 in the LIN segment be sequential, starting at 1 for each new message."

Note on DE 7140: Only the following significant digits are possible:

- 8 digits for GTIN 8 codes

- 12 digits for GTIN 12 codes

- 13 digits for GTIN 13 codes
- 14 digits for GTIN 14 codes

Dependency Note: C829 is only used when sub-lines are required. FOR A COMPLETE DESCRIPTION ON THE USAGE OF SUB-LINES PLEASE REFER TO PART I, SECTION 4.10.

#### Segment Notes:

This segment is used to specify additional or substitutional item identification codes such as a buyer's or seller's item number.

#### Examples:

PIA+1+AB7456:IN'

In this example the PIA segment is used to provide an additional identification to the GTIN provided in the LIN segment. The GTIN 5412345111115 provided in the LIN segment refers to the internal buyers item number AB7456.

#### PIA+2+4000862141662:SRV'

In this example the PIA segment is used to provide a GTIN identification for potential substitution. The product identified in the LIN segment by the GTIN 5412345111115 can be substituted by the product identified in the PIA segment by the GTIN 4000862141662 in case the former is not available.

PIA+5+2209953C001L:AC'

This example details the HIBC code 2209953C001L which is provided as the primary product code because no GTIN was provided in the LIN segment.

Segment Notes:

This segment is used to provide any free text information related to the current line item.

Use of this segment in free form is not recommended since it may inhibit automatic processing of the Request for Quote. Coded references to standard texts is an available functionality which enables automatic processing and reduces transmission and processing overheads. Standard texts should be mutually defined among trading partners and can be used to cover legal and other requirements.

Example:

FTX+ZZZ+1+066::91'

'Standard text 066 = Please refer to latest contract and price catalogues for further information.'

5213	Sub-line item price change operation code	C an3	Ν					

#### Segment Notes:

This segment is used to specify pricing information relevant to the current line item.

Example:

For all the following examples the invoicing currency has already been identified as Pounds Sterling.

#### PRI+AAA:14.58:CT:DPR'

Net price of 14.58 (excluding tax) to be used for calculation purposes. This price includes all allowances and charges. The price is a contract and discount price.

#### PRI+AAB:25:CT'

Gross calculation price of 25 (excluding tax) which does not include any allowances or charges. The price is a contract price.

#### PRI+AAE:2.56:CA:SRP'

Price of 2.56 is a suggested retail price from the catalogue which does not include any allowances or charges but includes taxes.

#### PRI+AAF:4.20:CA:RTP'

#### Segment number: 29

Price of 4.20 is a retail price from the catalogue which does not include allowances, charges or taxes.

#### Dependency Notes:

Data elements 5284 and 6411 are used when a product is a variable quantity product, e.g. price per 200 kilos, or when the unit of measure for purchasing, delivery, and invoicing are different for a product, e.g. sugar is not a variable quantity product but ordered and delivered in packs, and invoiced in kilos or tonnes.

### **REQOTE** Request for quote message

#### 6. Examples

The following is an example of a simple Request for Quote message for one line item between a supplier identified with GLN 4012345000009 and a buyer identified with GLN 5412345000013. The buyer identifies the contact who will handle any queries regarding the request as being N Schulte.

The quotation is dated the 1st January 2002 with a reference number RQT709. The buyer requests information on the terms of delivery and the basic payment terms.

The product is identified by GTIN 4012345111118. The buyer requests information on the products dimensions, its calculation gross price for 50 units of the product, its rate of tax, and any allowances available for it. Information is also requested on the main carriage transport which will be used to deliver the product.

UNH+ME000001+REQOTE:D:01B:UN:EAN004'	Message header
BGM+311+RQT709+9'	Request for quote number RQT709
DTM+137:20020101:102'	Message date 1st of January 2002
PAT+1'	Requests information on the basic payment terms
TOD+6++CIF:2E:9'	Requests information on the terms of delivery related to delivery condition
NAD+BY+5412345000013::9'	Buyer is identified using GLN 5412345000013
CTA+IC+:N SCHULTE'	Information contact person within the buyer's organization is NSchulte
COM+0033154768212:FX'	Specification of fax number for information contact
NAD+SU+4012345000009::9'	Supplier is identified using GLN 4012345000009
LIN+1++4012345111118:SRV'	Product for which a quotation is requested is identified by GTIN 4012345111118
MEA+PD'	Requests information related to the product's physical dimensions
QTY+1:50'	Requests a quotation for the supply of 50 units
PRI+AAA'	Requests the net calculation price for the product
TAX+7'	Requests the tax rate for the product
ALC+A'	Requests the allowances data for the product
UNS+S'	Message detail/summary section separation
CNT+2:1'	Count of number of LIN segments in the message
UNT+18+ME000001'	Total number of segments in the message equals 18

#### Note:

The EDI interchange will include the UNB..UNZ segments and, if applicable, the UNG..UNE segments (see part I, section 5.7).
