### Project Description

Standards describing the contents and structuring of the GS1 2D barcode symbol (and other GS1 data carriers) on the transport component of the GS1 Logistic Label, particularly data elements that enable the transport process in the absence of access to host applications providing information related to the transport unit.

#### Key Transportation Process
- First/Last Mile process (e.g. delivery route optimisation)
- Sortation/Auto-sortation process (e.g. efficient sorting of parcels in the depot)
- Administration process (e.g. capturing proof-of-delivery, billing)

#### Deliverable/Objective
Develop a GS1 standard to enable industry to encode the minimum required transport data in a 2D barcode on a logistics label.

### Completed last 30 days
- Started survey to determine level of readiness to implement S4T solution with digital link
- Resolving community review comments S4T Application Standard

### Next steps
- Assess and share survey results and determine next steps
- Seek motion to eBallot on S4T Application Standard

### Risks and Issues
None

### Milestone deliverables
- Project approved December ‘18
- Requirements March ‘19
- Draft standard March ‘20
- Publication April ‘20
