Tag one step left, and one step right ... 

Identifying with more than one RFID tag

To date:
- Just one RFID tag on either carton or shoe
- Support of basic use cases (stock-taking, goods receiving, etc.)

In the future:
- Enabling users to distinguish the left and right shoe
- Empowering many advanced use cases, e.g. automation of production, shoe matching and acceleration of customer returns
- Supporting all presentation forms in the shoe sector
- Solution approach in a nutshell:
  - Leveraging GTIN Indicator Digit
  - Making use of RFID Filter Values
