1> GLOBAL
SOLUTIONS

solutions

THE EAN•UCC SYSTEM IS A SET OF STANDARDS ENABLING THE EFFICIENT MANAGEMENT OF GLOBAL, MULTI-INDUSTRY SUPPLY CHAINS BY UNIQUELY IDENTIFYING PRODUCTS, SHIPPING UNITS, ASSETS, LOCATIONS AND SERVICES.

IT FACILITATES ELECTRONIC COMMERCE PROCESSES INCLUDING FULL TRACKING AND TRACEABILITY.

THE GOAL OF EAN INTERNATIONAL IS TO IMPROVE SUPPLY CHAIN MANAGEMENT AND OTHER BUSINESS TRANSACTIONS THAT REDUCE COSTS AND/OR ADD VALUE FOR BOTH GOODS AND SERVICES.

2>MISSION

The mission of EAN International and the Numbering Organisations is to take a leading role in establishing a global multi-industry system of identification and communication for products, services and locations based on internationally accepted and business led standards.

The objective is to improve the efficiency of integrated logistics while contributing added value to partners involved, as well as to consumers.

CLOSER TO US, THE RUSSIAN-BORN PHYSICIST AND NOBEL-PRIZE WINNER ILYA PRIGOGINE STATES THAT HUMANITY HAS CROSSED A WATERSHED IN ITS MENTAL HISTORY. AS MUCH AS THERE IS NO CERTAINTY ANYMORE IN THE LAWS OF CHEMISTRY AND PHYSICS, THERE ARE NO ETERNAL LAWS GOVERNING THE ACTIONS OF HUMANS. PROFESSOR PRIGOGINE'S WORK ON TIME, ORDER AND CHAOS IS LAYING BRIDGES BETWEEN FIELDS AS FAR APART AS THERMODYNAMICS AND MACROECONOMICS.

VICE-PRESIDENT
OF EAN INTERNATIONAL

WHAT DOES THIS ALL MEAN FOR US?

Globalisation, information and communication technology are upsetting the best established among the old business models. Globalisation means that products and services are being sourced and sold throughout the world. Digital communications and computers make it possible to transmit and interpret massive amounts of information in the blink of the eye.

Our world has become a lot smaller and a lot more complex at the same time. It has also become richer in new possibilities.

EAN International's core activity is setting global standards for business communication. As a standards-setting organization, we naturally seek to inject order into chaos. We see our mission as creating stability. We have a natural tendency to shun change.

We would like EAN International to espouse change wholeheartedly.

Our users' needs are changing quickly. We at EAN International must help them along by anticipating their needs. This is why we are forging ahead in establishing EAN•UCC standards for electronic commerce. E-commerce is not only changing the way many of our users function on a day-to-day business, it is often forcing them to reinvent their basic business model.

Changing user needs is also why EAN International is modifying its internal organizational structures under the EANOR project. We want to be more nimble, more proactive and more efficient in the new economy that is being shaped by the twin forces of technology and globalisation.

Only by embracing change can EAN International continue to be effective as a standards-setting organization and create the conditions for its users to thrive in this new business environment. As the only global and open organization of our kind, we are ideally placed to do so.

There is no stability – whether in Greek rivers, modern physics laboratories or the global business world. The only thing one can be sure of is that change will always be there.

Reinhold van Lennep
MANAGING DIRECTOR

John Berry
PRESIDENT

Laurie Wilson
VICE-PRESIDENT

4> EAN INTERNATIONAL :

FROM PRODUCT NUMBERING TO UNIVERSAL LANGUAGE

Since the world is becoming an ever-smaller place, businesses have to adapt in many ways. Rapid evolution of roles within the value chain, shifting demand patterns, new channels of distribution, and increased service expectations from customers raise the need for improved business solutions.

The vision came early. In 1974, manufacturers and distributors from 12 European countries got together to examine the possibility of developing a uniform and standard numbering system for Europe similar to the UPC system already in use in the USA. This led to the creation of "European Article Numbering," a UPC-compatible system.

The actual EAN association, however, was formed three years later in February 1977. The new organization was set up under Belgian law as a not-for-profit international association and endowed with General Secretariat based in Brussels.

Its aim was – and still is – the development of a set of standards enabling the efficient management of global, multi-industry supply chains by uniquely identifying products, shipping units, assets, locations and services. The system has since emerged as a key facilitator in the electronic-commerce revolution because of its unique tracking and trace ability capabilities for both business-to-business and business-to-consumer transactions.

In the meantime, global and international reach was quickly acquired by extending membership to business organizations from other continents. Reflecting EAN International's increasing global presence, the name was changed to EAN International in 1992.

Today EAN International comprises 92 Numbering Organizations representing 94 countries. The Numbering Organizations provide full support and information to their local member companies. More than 800,000 member companies today benefit from using the EAN•UCC system.

The EAN•UCC system consists of the following:

- A system for numbering items – consumer products, services, transport, location, among other things – and allowing unambiguous identification
- A system for representing supplementary information such as batch number, date and measurement
- Standard bar codes containing information which can be easily recognized and scanned by computers
- A set of messages for Electronic Data Interchange, or EDI, transactions. These are known as EANCOM® messages.

:21+5'CUX+2:GBP:9+3:BEF:4+48.50'DTM+134:19930801:102'TDT+20++30+31'

CHANGE IS THE ONLY CONSTANT FACTOR

The rapid growth of the EAN•UCC system is indeed impressive. But even more impressive is the fact that such a large number of trade and industry players have agreed to utilize a single, uniform international coding and communications system.

Future success depends on the ability to deliver consistently high quality service. To this end, EAN•UCC bodies are continuously adding to their pool of skills to enhance and strengthen their service delivery. Today, over 1500 dedicated executives around the world continue to build on the success of the organization and to expand EAN•UCC's global multi-industry reach.

EAN International and the UCC are driving their vision of "one system for the global marketplace" through leadership, innovation, technological support and the establishment of multi-industry standards for logistical supply and administrative processes. Continuous research and development with a market-focused view ensure efficient, effective and innovative solutions for all emerging business needs.

5> DEVELOPING AND MANAGING

THE EAN•UCC SYSTEM INTO THE 21ST CENTURY

Open standards benefit all users, helping create a level playing field for nations across continents. They bring the stability and technical backbone necessary for truly seamless, borderless trade and electronic commerce.

In a fast-changing, global market place, every business today is wrestling with newly emerging technologies and competitors. Together with its members, EAN International is working hard to respond to these changes and better serve its users. We see change as an opportunity to promote and implement the EAN•UCC system in an ever-wider variety of industries. Our business is to establish an effective communication system joining all trading partners throughout the supply chain – from manufacturers to wholesalers, distributors, retailers and consumers – and to provide a common language for worldwide trade and electronic commerce.

The EAN•UCC system provides the necessary communication tools allowing users to streamline the flow of information in the supply chain and optimise their operations. The release of the General EAN•UCC specifications in 1999 represented a giant step toward a truly global system. Usage of the EAN International standard for Electronic Data Interchange applications has seen explosive growth, with a 50% increase in the number of companies implementing the system in one year.

Technology is evolving fast. EAN International is keen to identify available opportunities and to match them with the requirements of users. XML is today's buzzword in the area of electronic commerce. EAN International spent a considerable amount of time and efforts in 1999 to understand the technology and its possible applications. A strategy and concrete action plans have been elaborated. The short-term objective is to develop

and make available to software providers a standard XML library. Pilot implementations will be conducted internationally.

Another area that is gaining considerable interest is the use of Internet-based systems to facilitate master data alignment. In early 1999, EAN International started interconnecting the membership databases of its Numbering Organizations throughout the world. Interconnection will allow anyone, anywhere to identify the issuer of any EAN•UCC identification number.

The alignment of master product data is key to the efficient flow of information throughout the global supply chain. Electronic catalogues providing product data have been set up under the auspices of the EAN Numbering Organizations in more than 10 countries. Interconnection of these local systems began in 1999 and the first systems offering interconnection facilities are scheduled to become available by the end of 2000. This will eventually enable companies to load master product information locally and make it available to all trading partners anywhere in the world.

Automatic Data Capture is another cutting-edge area where EAN International is actively involved. In October 1999, AIM Inc., the international association of equipment manufacturers, officially approved the RSS (Reduced Space Symbology) and Composite Symbology specifications. Working parties have been set up with the aim to develop application specifications and to monitor pilot implementations.

Radio Frequency Identification is equally an important development area. RFID versus traditional barcodes represents a new data carrier.

EAN International and the UCC issued a white paper on RFID in November 1999, identifying the main application areas where RFID is expected to complement existing standards. EAN International and the UCC are now moving to the next stage by developing specifications for storing and accessing data on RFID tags. As a result, RFID-based standards are scheduled to be included in the EAN•UCC specifications within the coming two years.

CIF'LIN+1+4000862141404:EN'PIA+1+ABC1234:BP'IND+C++TU;

The result is that EAN International today can provide a comprehensive and powerful set of standards for supply-chain management that is evolving rapidly into the digital age. The EAN•UCC system, which started twenty-two years ago with a single application, the identification and marking of consumer items, is now spanning the globe in multiple industries. EAN International, too, has expanded enormously. It will continue to be setting standards and contributing value to the worldwide user base of the EAN•UCC system.

> ELECTRONIC COMMERCE

EANCOM®

Maintenance of the EANCOM® standard once again proved to be the most intensive aspect of the GCC (Global Communications Committee) work. During the past year almost 300 change requests for EANCOM® were processed by the GCC – triple the volume of work during the mid-1990's.

The main reason for this increase is the global success of the EAN•UCC system. Among other factors we can point to the spreading use of EANCOM® to new industry sectors such as the textiles and automotive parts industries, the increase in the overall EAN•UCC

membership and user companies' migration to EANCOM® from national EDI standard systems.

The EAN International and UCC boards last year approved a policy whereby Numbering Organizations would set dates by when the development of national EDI standards would cease. This set a target date for which Numbering Organizations maintaining

national standards would start to focus their development efforts on EANCOM®.

In July 1999, the Direct Debit (DIRDEB) message was added to the EANCOM® message set and an updated code list was issued.

XML

XML stands for "eXtensible Markup Language". However, XML extends beyond the syntax and beyond documents. It is supported by its so-called 'companion standards' that enhance the core syntax for example, the ability to query. They form a complete toolbox for publishing and application integration.

What is the history of XML?

XML was developed by the World Wide Web Consortium to bring the power of SGML to the Web in a simplified form to overcome HTML's

inherent limitations and enable new kinds of Internet applications.

SGML, the Standard Generalized Markup Language, is an ISO standard (ISO 8879: 1986) that evolved from IBM's GML. SGML is widely used for high-end publishing applications for encoding information in a vendor-independent format. SGML is also often criticized for a complex syntax that makes it hard to learn and implement and for having different syntaxes for models and instances.

What does XML do?

XML, like SGML, is a "meta-language" that defines the rules for creating the markup languages for encoding instances of particular document or message types. The formal specification for any markup language defined using SGML or XML is called the Document Type Definition or DTD. A document instance that conforms to the rules in its associated DTD is said to be "valid."

What is the difference between XML and HTML?

In contrast to SGML or XML, HTML is a specific markup language that contains a fixed set of elements and attributes. HTML has a limited repertoire of structural tags like headings, lists, and links, some tags for encoding formatting information like text attributes and layout, and very few tags for encoding types of information content.

However, as the Web evolved, HTML's initially simple tag set encouraged "hand-crafting" of Web pages, misuse of tags to achieve formatting effects, and proprietary additions to HTML by browser and application developers who needed richer markup to support additional functionality. Furthermore, while HTML can be described using a DTD, the vast majority of HTML on the Web is invalid. Taken together, HTML's fundamental limitations and typical usage without validation make it difficult for search engines and automated processes to exploit Web information because of the lack of reliable semantic encoding.

XML can solve these problems with HTML and give the Web a much stronger capability for electronic commerce. XML makes it possible to encode information with meaningful structure and semantics in a very accessible notation that is both human-readable and readily processable by computers. While XML 1.0 adds no new modelling capabilities beyond those

that have been available in SGML for over a decade, the simpler XML syntax makes it much easier for non-specialists to participate in the design of new markup languages.

Is XML a replacement for EDIFACT?

Despite rapid advances in Internet-based technologies, the use of traditional EDI languages such as UN/EDIFACT are likely to continue growing for the next five to 10 years. EAN International does not expect that XML will replace EDIFACT in the near future; XML and EDIFACT are likely to be used as complementary standards during the next decade. XML and EDIFACT are EDI languages – with their strengths and weaknesses.

In July 1999, EAN International commissioned an independent study investigating the role, which EAN•UCC should play in XML developments. The study recommended that EAN International and the UCC get actively involved in the development of XML for the EAN•UCC community.

The first step in implementing this recommendation is to be launched soon as an EAN•UCC XML pilot project. The project, which involves EAN•UCC members in all corners of the globe, will focus on the creation and testing of XML components for master data alignment, ordering, dispatching

and invoicing applications. Test transmissions are scheduled to start during the second quarter of 2000 and to run for a full year.

The purpose of these tests is to allow EAN International and the UCC to start standardizing XML dialects. The EAN•UCC system will thus become the driver for the creation of re-usable XML components, allowing the EAN•UCC members to communicate without fear of dialect confusion. Mechanisms to develop and publish such XML components will be put in place following the successful completion of the proof-of-concept pilot project.

In June 1998, EAN International published the document *Electronic Catalogues: EAN Recommendations*, which was intended to help EAN Numbering Organizations and other parties in setting up electronic catalogues. The document was endorsed by the ECR Europe EDI project, which was also investigating the subject of master data alignment using electronic catalogues. The results of the ECR Europe investigation found that unless corrective action was taken, the speed of catalogue development would result in a situation where the interoperation of electronic catalogue services would not be possible in the future.

To address the problem, the ECR Europe EDI committee launched the Inter-Operability of Data Pools (IODP) project. The aims are to identify the

user company requirements for catalogue inter-operability and to produce recommendations on how to make inter-operability a reality.

To help push forward the work of the EAN International Electronic Catalogues and of the ECR Europe IODP, EAN International

brought together experts to investigate how to successfully realize the ECR Europe vision of inter-operability.

This latter project was called Global Data Alignment Service (GDAS). With the aim of identifying the key success criteria of the ECR Europe project, its findings were published in February 2000. EAN International intends to continue pushing this matter forward.

> AUTOMATIC DATA CAPTURE

GENERAL EAN•UCC SPECIFICATIONS

January 1999 saw the release of the global Automatic Data Capture (ADC) standards manual, also known as the General EAN•UCC Specifications. Representing the full integration and harmonization of the global standards, the ISO/IEC symbology specifications relevant to the EAN•UCC system were incorporated and released in October 1999. A chapter giving recommendations on symbol placement for trade items and logistic units was released at the same time.

The General EAN•UCC Specifications is a live document. Changes, such as the addition of three

new Application Identifiers, are being made on a continuing basis in order to meet the changing requirements of global EAN•UCC system users.

A new version of the manual integrating all the above changes and amendments has been released in January 2000. The new document is available to users in paper as well as in CD-ROM format. The latter will form the basis of other electronic tools for standard maintenance and development currently being worked on by EAN International.

RSS / COMPOSITE SYMBOLOGY

Always looking to improve supply chain management and other business processes to reduce costs and/or add value, EAN•UCC began studies in 1996 to identify solutions for space constrained product marking applications where existing EAN•UCC

standards could not be applied effectively. This resulted in the development of the Reduced Space Symbology (RSS) and Composite Symbology. RSS, a linear symbology, was developed to encode the GTIN (Global Trade Item Number) on space-

constrained items where existing linear symbologies could not normally be used.

At the same time, a new class of symbol was also being designed, known as the Composite Symbology. RSS bar codes can be combined with a 2D Component to form an entirely new class of symbology – the EAN•UCC Composite Symbology. It consists of a linear symbol accompanied by a two-dimensional symbol printed on top of the linear. The linear component can be any one of the following linear symbologies, such as the EAN/UPC, UCC/EAN-128 or RSS.

The technical specifications for these two new solutions are now available, and are expected to be fast-tracked into becoming ISO/IEC standards in the near future. In line with the technical development has been work

with Application User Groups, in the areas of Variable Measure, Logistics, Very small items/healthcare and Loose Produce.

At the end of November 1999, EAN International and the UCC co-hosted a one-day conference and workshop. With nearly 60 participants from retail, manufacturing and produce supplying, equipment suppliers and EAN Numbering Organizations attending, the day started with a plenary session followed by two workshop sessions in the afternoon. It was designed as an occasion to allow users and potential users of the EAN•UCC system a chance to get more detailed information and to see the technology demonstrated.

EAN International and the UCC expect to be releasing application specifications for this new tool in 2000

RADIO FREQUENCY IDENTIFICATION

In 1998, EAN International and the UCC launched a global project team with the objective of determining the main supply-chain applications that could benefit from radio frequency identification. In November 1999, the EAN•UCC RFID Project Team published their 'White Paper' on RFID in order to stimulate further discussion and feedback from potential users and manufacturers.

The White Paper argues that RFID is a highly useful complement to existing EAN•UCC tools for applications that might include the management of assets such as returnable transport items, logistics management such as the tracking and tracing of perishable items, and electronic article control.

However, the investigations carried out by the EAN•UCC team also identified several potential drawbacks of RFID. A first finding was that the technology lacks focus and is too diverse and undefined

for users to make clear and qualified judgements about its merits. In addition, RFID standards are some time away and are highly dependent on technological developments. It was nevertheless recognized that the market requires short-term solutions.

To move the standardization process along EAN International has been actively involved in the work that ISO/IEC has been doing with RFID technical standards for item management. In addition, EAN International and the UCC are actively working with other groups that are also committed to developing standards in this arena.

These include the CPMA (Consumer Products Manufacturers Association) and the GCI (Global Commerce Initiative).

To ensure the data content of RFID tags remains the same as bar codes, EAN International is also involved and anticipates that standards will be available within 2 years.

6> ADDING VALUE TO THE BUSINESS COMMUNITY

Rapid evolution of roles in the value chain, new channels of distribution, shifting demand patterns globalisation and increased service expectations are all factors that have resulted in new business buzzwords such as Efficient Consumer Response (ECR) or Supply Chain Management (SCM).

These new concepts require better co-operation between companies in the supply chain. They are receiving top-management attention. And they have raised the importance and visibility of EAN•UCC standards in the business world.

The use of information and communication technology (ICT) is growing rapidly in supply-

chain management thanks to major technological advances. Information and communication technology is being used to boost the efficiency of existing processes or to invent new ones. These advances have made electronic commerce possible, and e-commerce is drawing a lot of attention as a strategic issue for many businesses. Although the term e-commerce is used in many different contexts, the important thing for EAN International and its user community is that information and communication technology use will continue to grow at a rapid pace, fuelling unprecedented need for consistent rules – the global, open standards that EAN•UCC provides.

AGROCHEMICALS AND EAN•UCC STANDARDS

European and North American agrochemical industry representatives agreed to introduce full compatibility of crop protection product coding in Europe, the USA and Canada based on EAN•UCC standards in February 2000. The decision is hailed by EAN International as an important step leading to the acceptance of the EAN•UCC system as the international standard for the agrochemical industry.

EAN International and UCC are participating in the CRISTAL/RAPID Product Coding Convergence Working Group. The working group intends to put together a proposal for a product coding solution to be applied globally. Recent discussions between the CRISTAL and RAPID project teams indicate that they are finding common ground, paving the way to the use of EAN•UCC standards by agrochemical companies in the Asia Pacific region, Latin America, the Middle East and Africa.

CONSUMER SAFETY – MEAT PRODUCTS AND FRESH PRODUCE TRACEABILITY

EAN International facilitates efficient international meat trade and food safety by developing and promoting global solutions for the identification, communication and traceability of meat products. In co-operation with the governments of major meat producing countries, EAN•UCC system tools are deployed in support of the United Nations

Economic Commission for Europe (UN/ECE) Meat Carcasses & Cuts Standard.

The EAN•UCC system is utilized as the recommended standard codification system to enhance the communication between buyers, sellers, and third-party conformity assessment entities.

The combination of automated data capture, electronic data interchange and DNA technology provides a powerful leap forward in quality assurance, process control and food safety. The ability of EAN•UCC system-based food traceability plans to display the origin of consumer beef packs and use of DNA technology to verify this information makes it possible to reassure consumers on the integrity and quality of meat products. EAN International participates in the Meat Automation Concerted Action; a project financed by the European Commission, together with end user representatives, research organizations and equipment manufacturers. The objective of the project is to improve the competitiveness

product quality of the meat sector for the benefit of the consumer.

Consumer safety has become a critical issue in the food industry. EuroHandelsinstitut (EHI), the European Association of Fresh Produce Importers (CIMO), the Euro Retailer Produce Working Group (EUREP), the European Union of the Fruit and Vegetable Wholesale, Import and Export Trade (EUROFEL), and the Southern Hemisphere Association of Fresh Fruit Exporters (SHAFPE) are collaborating with EAN

International in developing guidelines for the application of EAN•UCC standards in the identification, communication, and traceability of fruits and vegetables.

EAN•UCC IN HEALTHCARE

During 1999, France and Poland joined the ranks of the 44 countries using the EAN•UCC system for the coding of pharmaceutical products.

The Japanese Federation of Medical Devices Associations, meanwhile, adopted the EAN•UCC system for medical and paramedical supplies with the support of the Japanese Ministry of Health and Welfare.

In a similar move, the Australian healthcare sector, with the full backing of the government, has opted for the EAN•UCC system for the coding of all prescription and over the counter drugs.

The use of the EAN•UCC system is not restricted to the identification of healthcare products. Hundreds of hospitals around the world are successfully using the system to meet their logistical, supply and administration requirements.

The Thai Ministry of Public Health, for example, has elected to implement the EAN•UCC as the official national system for the healthcare sector.

EAN International supports and participates in a number of healthcare industry initiatives to better support users of the EAN•UCC system. One of

these initiatives is the Bringing Improvements in Healthcare Processes (BIHP) project. BIHP was launched with the Healthcare Centre of Excellence of Deloitte & Touche to develop a global healthcare supply-chain model starting from the patient and moving all the way up to the suppliers of drugs, medical, surgical and other healthcare products.

The goal of BIHP is to reduce costs and improve the quality of service. The project will demonstrate the benefits of process re-engineering and the use of information-technology tools based on EAN•UCC standards for all players in the healthcare sector.

SUPPLY CHAIN MANAGEMENT TOOLS FOR THE PACKAGING INDUSTRY

The Packaging Supply Chain Project was started to develop and promote efficient supply-chain solutions for suppliers of packaging materials. These solutions enable consumers, industry customers and shareholders to benefit from global business standards and electronic business tools.

The brochure "Supply Chain Management Tools for the Packaging Industry" summarizes the results of the project. It also provides a guide

for packaging companies, as well as for their customers and suppliers, which want to introduce EAN•UCC standards to support advanced supply-chain management and strategic initiatives, such as efficient consumer response.

The publication includes current best practice examples of EAN•UCC system application in the packaging supply chain and key recommendations to the suppliers of packaging materials.

E-COMMERCE TOOLS FOR THE TRANSPORT INDUSTRY.

In "E-commerce Tools for the Transport Industry", eight leading transport service providers illustrate how they support efficient handling, inventory management, product movement, shipping and delivery.

In 1997, EAN International and UCC launched the Trans-core Project to study the transport and logistics information requirements in various transport modes. The Trans-core Project utilized the Business Process Modelling technique to understand how logistic and transport processes (i.e. sets of interrelated business functions or tasks) work and how they are structured. This resulted in the Trans-core Multi-modal Model,

which graphically displays how business transactions are conducted throughout the supply chain and how transport providers, and their customers exchange data with each other.

The newly launched EAN International Global Transport Initiative intends to provide a global standard practice based on the Trans-core Multi-modal model.

It will provide supply-chain partners with guidance and tools to define which data must be bar-coded on transport goods and which information must be available on accompanying documents to be transmitted via EDI or the Internet.

TEXTILES AND APPAREL MANUFACTURERS BENEFIT FROM THE EAN•UCC SYSTEM

Efficient supply-chain management calls for all trading partners to abide by procedures and international standards that are compatible both downstream (finished products) and upstream (raw materials and semi-finished products) in the textiles and apparel sectors.

The "Supply Chain Management for Textiles, Apparel and Garments

Project" launched by EAN International and sponsored by leading apparel manufacturers, want to improve industry efficiency and productivity by applying the EAN•UCC system. The goal is to streamline, automate and integrate processes between supply-chain trading partners. Several pilot projects are being launched to validate the benefits of using the EAN•UCC system in this sector.

SOFTWARE HOUSES AND THE EAN•UCC SYSTEM

EAN•UCC has begun a campaign to further strengthen relations to major software makers that incorporate its system in their products. The objective is to ensure that EAN•UCC members who use Enterprise Resource Planning and other software are able to seamlessly use the EAN•UCC system. Rosetta Net, the information technology and electronic components industry standards consortium has selected the EAN•UCC Global Trade Item Number (GTIN) as their standard for unique

product identification. The 14-digit GTIN will support electronic-commerce processes within the supply chains of the information technology and electronic components industries, providing full tracking and tracing of inventories, orders, billing and transportation. The UCC and EAN International have assigned staff to work with Rosetta Net members offering support for the implementation of the EAN•UCC system.

GLOBAL BUSINESS MODEL

EAN International and its partner the UCC developed a Global Business Model that will help information system experts, consultants, academics

and logistics professionals better understand the use of the EAN•UCC system in business processes.

7> GLOBAL REACH -

GLOBAL PRESENCE

EAN INTERNATIONAL AND THE UNIFORM CODE COUNCIL PROVIDE THE WORLD ECONOMY WITH GLOBAL SUPPLY CHAIN STANDARDS: A GLOBAL LANGUAGE OF BUSINESS.

OUR PRESENCE IS GLOBAL: NATIONAL EAN ORGANIZATIONS SUPPORT EAN•UCC SYSTEM USERS IN 94 COUNTRIES AND THE SYSTEM IS ADMINISTERED IN THE UNITED STATES OF AMERICA & CANADA BY OUR GLOBAL PARTNER: THE UNIFORM CODE COUNCIL.

EAN•UCC STANDARDS HAVE A GLOBAL REACH: OVER 800,000 COMPANIES IN MORE THAN 100 COUNTRIES TODAY USE THE EAN•UCC SYSTEM.

HELP DESKS

At the EAN International head office, three e-mail help desks offer quick and competent advice on all questions related to EAN. For questions related to electronic commerce, turn to edihelp@ean.be. Questions on automatic data capture can be directed to adchelp@ean.be.

Please mail your general enquiries to info@ean.be.

Many national EAN organizations offer similar helpdesks in the local language. Please refer to the section Synopsis of the Activities of the Member Numbering Organizations.

WEB SITE

Due to the fast and continuing evolution of web technologies and applications, the EAN International Head Office decided in September 1999 to revamp its web site www.ean.be.

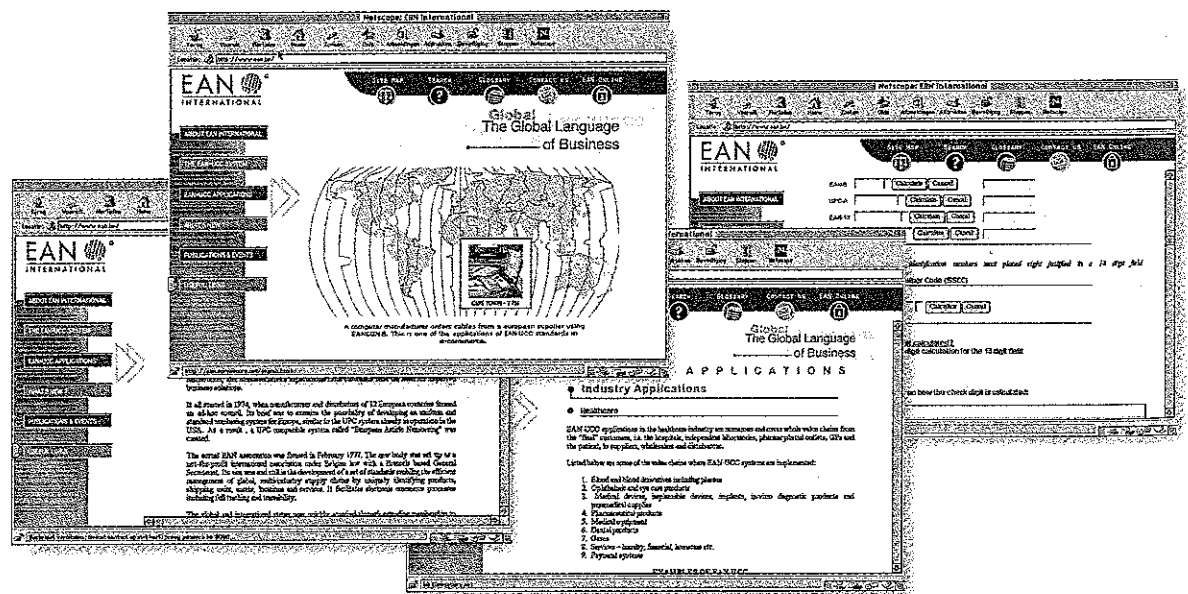

The following features and functionalities will add value to the content of the new EAN International web site:

The objectives of this upgrade are:

- to better promote the EAN•UCC system
- to highlight EAN's pro-active role in new technologies and developments such as e-business or XML
- to provide information on the EAN•UCC system at an international level
- to reshape the structure
- to improve the design
- to facilitate navigation

- a section on RFID (radio frequency identification)
- a section on XML/EDI
- training tools
- case studies
- examples of applications of the EAN•UCC system in various areas such as the healthcare, transport, packaging, meat and computer industries
- a glossary of technical terms
- a feedback form
- a site map
- a search engine

The new EAN International web site is planned to be on-line in the course of April 2000. Keep this date in mind, go and visit it and send us some feedback.

NORWAY

CHANGE IS THE ONLY CONSTANT FACTOR

• ALGERIA

EAN ALGERIE - ORGANISATION ALGERIENNE DE
CODIFICATION DES ARTICLES (JOINED IN 1994)
ROUTE NATIONALE N°5
EL ALIA-BAB EZZOUAR - BP 250 EL MADANIA
TEL: 613 2 24 30 99
FAX: 613 2 24 45 12
e-mail: eanalgerie@wissal.dz

>

During 1999, EAN ALGERIE continued to work towards the expansion of the EAN•UCC system mainly within the food, cosmetics, textile and healthcare sectors. At the end of 1999, EAN ALGERIE had 230 members, this is an increase of 49.03%. A total of 75 manufacturer numbers have been allocated during 1999 and a total of 1453 product codes have been assigned. An increase of 137% over last year (611 codes). During 1999, EAN ALGERIE has participated to three important fairs in Algeria: The National Product Fair (June 1999), The International Fair of Algiers (October 1999) and The International Fair of food and packaging (November 1999). During the year, EAN ALGERIE increased its promotional activities by encouraging the use of EAN•UCC numbering and bar coding application and distributing information leaflets on EAN•UCC standards and application to companies during economic fairs.

• ARGENTINA

EAN ARGENTINA (JOINED IN 1985)
VIANONTE 340 P. 1
1053 BUENOS AIRES
TEL: 54 11 4510 1730
FAX: 54 11 4510 1740
e-mail: aapcomer@infovia.com.ar
web site: www.codigo.com.ar

>

EAN ARGENTINA extended its activities to other sectors (transport and healthcare). There has been much progress in textile and fresh produce, with the development of pilot projects of the use of EDI in those sectors. The Permanent Logistics Committee, with around 30 directors and logistics managers of the most important companies in Argentina involved provided an important work, with an exhaustive study of the problem of efficient pallet management throughout the supply chain and the development of an electronic catalogue for logistic database alignment.

• ARMENIA

EAN ARMENIA (JOINED IN 1996)
KOMITAS AVE. 49/2
375051 YEREVAN
TEL: 374 2 234 778
FAX: 374 2 285 620
e-mail: paslanian@england.com
web site: www.sarm.am/ean.htm

>

EAN ARMENIA held several seminars on the packaging, textile and meat sectors. EAN ARMENIA kept on working on extending the EAN•UCC standards amongst others by issuing promotional brochures.

• AUSTRALIA

EAN AUSTRALIA LTD (JOINED IN 1979)
2 KINGSTON TOWN CLOSE
OAKLEIGH,
VICTORIA, 3166
TEL: 61 3 9569 9755
FAX: 61 3 9569 1525
e-mail: eanaust@ean.com.au
web site: www.ean.com.au

>

EAN AUSTRALIA actively participates in a number of healthcare projects and initiatives. The Australian Government Health Department in conjunction with the Healthcare Industry has agreed to adopt the EAN•UCC system for pharmaceutical products, in both clinical and supply chain applications. It will resume its activities in the transport sector and has been working with the meat industry, producing the "EAN Guidelines for meat traceability". Membership grew to 11,126 and a record number of samples (90,000) have been barcode tested using Australia's verification services.

• AUSTRIA

EAN AUSTRIA - GESELLSCHAFT FÜR KOOPERATIVE
LOGISTIK GES.M.B.H. (JOINED IN 1977)
MAYERHOFGASSE 1/15
1040 WIEN
TEL: 43 1 505 86 01
FAX: 43 1 505 86 01 22
e-mail: office@ean.co.at
web site: www.ean.co.at

>

EAN AUSTRIA is working on its ECR activities in the transport sector. The transport service providers participate in working groups and in pilot projects. In the healthcare sector, scanning at the point-of-sale (POS) and in logistics application is increasing. The use of UCC/EAN-128 for encoding more information on products and logistic items is being discussed. EAN AUSTRIA are in the phase of setting up pilot projects with major Austrian packaging suppliers and key suppliers of branded goods in the field of corrugated carton production. In the meat sector, EAN AUSTRIA co-operates with the organisation in charge of implementing EU beef labelling regulations in Austria (AMA) and convinced them to recommend UCC/EAN-128 for the tracking and tracing of beef products.

• AZERBAIJAN

EAN-AZERBAIJAN
42, KHAGANI STR.
BAKU-370010
TEL: (99412) 935463
FAX: (99412) 984856
e-mail: khazri@azeri.com

>

EAN AZERBAIJAN received grants from the Open Society Institute-Azerbaijan (Soros) and Eurasia foundations for doing research on the use of barcodes in Azerbaijan. EAN AZERBAIJAN is working to increase the number of bar code users in Azerbaijan and attract representatives of other manufacturing sectors.

• BELARUS

EAN BELARUS (JOINED IN 1997)
25, AKADEMICHESKAJA STR.
MINSK, 220072
TEL: 375 17 284 19 55
FAX: 375 17 284 22 77
e-mail: ean@bas-net.by

>

EAN BELARUS works in close contact with the republican commercial and industrial chamber and with bodies of coordination and management in the following branches: textiles, healthcare, electronics, mechanical engineering, manufacture of food products and processing of agricultural production. In 1999 EAN BELARUS continued to work on promoting

the EAN•UCC system in Byelorussia mainly to the food, beverages, and cosmetics sectors and primary for exporting companies. EAN BELARUS will take part in the development and the introduction of the standards in the field of automatic identification appropriate to the requirements international standardisation and EAN•UCC system in the Russian language together with UNISCAN/EAN RUSSIA and other independent states of the former Soviet Union.

• BELGIUM & LUXEMBOURG

ICODIF/EAN BELGIUM•LUXEMBOURG (JOINED IN 1977)
RUE ROYALE 29
1000 BRUXELLES
TEL: 32 2 229 18 80
FAX: 32 2 217 43 47
e-mail: icodif@eanbelgilux.be
web site: www.eanbelgilux.be

>

ICODIF/EAN BELGIUM•LUXEMBOURG is working with several associations and official bodies in the meat sector and was requested to make proposals for barcoding meat labels. Proposals include identification and traceability from slaughter house to packaging. In December 1999 a successful pilot phase with 5 EANCOM® messages led to the publication of 5 User Profiles for the carpeting sector. These User Profiles were also presented to the European Carpet Association that is willing to promote them as European EDI-solution. ICODIF/EAN Belgium•Luxembourg developed a technical concept of an electronic product catalogue (CDB or Central Data Bank). Several retailers and suppliers, members of the CDB project team, are willing to participate in a pilot to be launched early 2000.

• BOLIVIA

EAN BOLIVIA - INSTITUTO DE CODIFICACIÓN COMERCIAL
(JOINED IN 1994)
SUÁREZ DE FIGUEROA No. 127
SANTA CRUZ
TEL: 591 3 334555
FAX: 591 3 342353
e-mail: ean.bolivia@cainco.org.bo
web site: www.cainco.org.bo

>

EAN BOLIVIA wants to increase its participation in the foods and beverages industry. An important leading supermarket applied the EAN•UCC system and therefore EAN BOLIVIA's membership increased with 62%. At the same time EAN BOLIVIA is promoting the use of the system in the textile, pharmaceutical and chemical sectors. A new office has been established in La Paz to give broader service to members.

• BOSNIA-HERZEGOVINA

EAN BIH (JOINED IN 1995)
BRANISLAVA DJURDJEVA 10
71000 SARAJEVO
TEL: 387 71 66 36 34
FAX: 387 71 66 36 34
e-mail: ean-bih@komorabih.com
web site: www.komorabih.com

>

In the context of national economic recovery, EAN BIH is working on its membership base.

• BRAZIL

EAN BRASIL - ASSOCIAÇÃO BRASILEIRA DE AUTOMAÇÃO COMERCIAL (JOINED IN 1985)
ALAMEDA SANTOS, 2441 9º AND. CEP 01419-002
SAO PAULO-SP
TEL: 55 11 8816560
FAX: 55 11 30643275
e-mail: ean@eanbrasil.org.br
web site: www.eanbrasil.org.br

>

EAN BRASIL intensified its efforts in the furniture, fresh produce, construction material and healthcare sectors. In the latter, EAN BRASIL is helping the Brazilian Government in the implementation of the health history card, working with hospitals in the process of automation and participating in a working group with the pharmaceutical laboratories to implement the INVOIC (pilot project). EAN Brasil organised a large number of events for the targeted industries.

• BULGARIA

BCCI - BULGARIAN CHAMBER OF COMMERCE AND INDUSTRY,
EAN BUREAU (JOINED IN 1991)
42 P. PARTCHEVITCH STR.
1000 SOFIA
TEL: 359 2 987 26 31
FAX: 359 2 987 32 09
e-mail: eanbg@bccf.bg
web site: www.bccf.bg

>

BCCI focussed on the implementation of the EAN•UCC standards and the growth of its membership base.

• CHILE

EAN CHILE - DIRECCION ESTRATEGICA PARA EL COMERCIO (JOINED IN 1989)
MERCED 230
SANTIAGO - CENTRO
TEL: 56 2 365 4230
FAX: 56 2 365 4222
e-mail: eanchile@cnc.cl
web site: www.eanchile.cl

>

In the healthcare sector EAN-CHILE is currently developing an ECR project to be implemented between laboratories and pharmacies. In the meat sector: they are working on a traceability project. In fresh produce they are working on a project which includes the codification of products and packaging units and the standardisation of the latter divided into species and specific weight. EAN CHILE has made its publication "Barras" within the Chilean market as the e-commerce magazine. It published several special issues about fresh produce. Since December '99 they have a new magazine "Logística y Distribución" which focuses on logistics and distribution. EAN CHILE is also working on its web site, in order to offer a better service and a more interactive tool to its members, linked to the new upgraded EAN-Chile electronic catalog.

• CHINA

ANCC - ARTICLE NUMBERING CENTRE OF CHINA
(JOINED IN 1991)
EAST GATE OF NO.46 YUZHONGXILI DEWAI
XICHENG DISTRICT, BEIJING, CHINA 100029
TEL: 86 10 620 24 533
FAX: 86 10 620 24 523
e-mail: ancc@public3.bta.net.cn

>

ANCC enhanced its membership service. They are setting up an electronic catalogue for products. They also drew up several national standards on EDI, 2D barcode & RFID and carried on RFID & 2D barcode applicational research. ANCC has also been active in increasing its relationships with governmental departments related to their target sectors.

• COLOMBIA

IAC COLOMBIA (JOINED IN 1989)
AV. DORADO No. 68 B- 85 TORRE 2 PISO 6
SANTAFE DE BOGOTA
TEL: 57 1 4270 999
FAX: 57 1 4270 212
e-mail: iaccol@ibm.net
web site: www.iaccolombia.org

>

IAC COLOMBIA concentrated on the development of electronic commerce in a wide range of sectors: retail and manufacture, finance, transport, textile, healthcare and social security. In the finance sector, they extended the use of the EAN•UCC system in 41 companies and 12 financial institutions. A pilot project is also being led in the insurance sector in 3 companies. IAC COLOMBIA is promoting the use of the EAN•UCC system in relationship with ECR in various sectors.

• COSTA RICA

EAN COSTA RICA (JOINED IN 1998)
CURRIDABAT, EDIFICIO GALERIAS DEL ESTE,
PRIMER PISO, OFICINA #7
SAN JOSÉ
TEL: 506 224 3255
FAX: 506 224 4722
e-mail: acccean@sol.racsa.co.cr
web site: eancostarica.co.cr

>

EAN COSTA RICA worked on the implementation of the EAN•UCC standards in the healthcare, customs, meat and fresh produce sectors. EAN COSTA RICA is working in close relationship with the academic world in order to include the standardisation theme in courses given at the University.

• CROATIA

EAN CROATIA - CROATIAN ARTICLE NUMBERING
ASSOCIATION (JOINED IN 1992)
ROOSEVELTOV TRG 2
10000 ZAGREB
TEL: 385 1 4826 342
FAX: 385 1 4826 347
e-mail: mail@cro-ean.hr
web site: www.cro-ean.hr

>

EAN CROATIA is implementing the EAN•UCC system as the national standard for variable measure trade items for the meat, cheese and fish industries (CRO-SCAN). They organize various seminars on UCC/EAN-128, RFID. EAN CROATIA launched a project on EDI and Global Location Numbers, finished the first phase of an Electronic Catalogue project on CD-Rom and promoted the EANCOM® and XML to their members.

• CUBA

EAN CUBA - CÁMARA DE COMERCIO DE LA REPÚBLICA
DE CUBA (JOINED IN 1990)
CALLE 21 No.661, ESQ.A, VEDADO
CIUDAD DE LA HABANA
TEL: 53 7 32 2693
FAX: 53 7 33 3042
e-mail: ean@camara.com.cu
web site: www.camaracuba.com.cu

>

EAN CUBA works with designers, publicity companies and research institutes involved with film master production, labels and packaging. During 1999 EAN CUBA maintained close relations with importers, exporters, distributors and retail companies of equipment and accessories for automatic data capture. The association held conferences, seminars, trainings and workshops for the member companies of the healthcare, pharmaceutical, construction industry and textile sector.

• CYPRUS

EAN CYPRUS - CYPRUS CHAMBER OF COMMERCE
& INDUSTRY (JOINED IN 1985)
38, GRIVAS DHIGENIS AVE., & 3, DELIGIORGIS STR.
P.O. Box 21455
1509 NICOSIA
TEL: 357 2 669 500
FAX: 357 2 665 685
e-mail: chamber@ccci.org.cy
Web Site: www.ccci.org.cy

>

EAN CYPRUS is organising a presentation on Healthcare on the 6th of April 2000, in cooperation with EAN Hellas, under the Mentoring Programme. Hospitals and clinics from the Public and the Private sectors have been invited, as well as the importers and manufacturers of pharmaceutical products and the clinical labs. EAN CYPRUS introduced the in-store coding standards and the variable weight identification standard for source market products.

• CZECH REPUBLIC

EAN CZECH REPUBLIC (JOINED IN 1983)
NA PANKRACI 30
140 00 PRAHA 4
TEL: 420 2 6100 1145
FAX: 420 2 6100 1147
e-mail: eancz@mbx.vol.cz
web site: www.editel.cz/ean

>

EAN CZECH REPUBLIC co-operates with different associations, such as the Czech Logistic Association, the Czech Standardisation Institut, the Czech Post... It also initiated a national brand numbering for variable weight items (about 4500 units). The investments made by major distribution companies in Czech Republic increased also the use of the EAN•UCC System.

• DENMARK

EAN-DENMARK (JOINED IN 1977)
ALDERSROGADE 6 D
2100 COPENHAGEN
TEL: 45 39 27 85 27
FAX: 45 39 27 85 10
e-mail: info@ean.dk
web site: www.ean.dk

>

EAN DENMARK finalized the "Implementation Guidelines for public procurement" with more messages included. It also established close contact with the furniture sector and cooperates on Danish and Nordic

level with the metered supply sector – especially electricity. A steady increase in new members was recorded, spread out in all sectors. EAN DENMARK signed agreement with a Danish VANS provider – LEC – in order to implement a WebEDI solution based on LiteEDI starting June 2000.

• DOMINICAN REPUBLIC

EAN REPUBLICA DOMINICANA (JOINED IN 1995)
EDIFICIO PLAZA COMPOSTELA - SUITE 3-1-5
AVE. JOHN F. KENNEDY ESQ. CALLE 7
SANTO DOMINGO
TEL: 809 683 4727
FAX: 809 683 4842
e-mail: eanrd@codetel.net.do
web site: www.eanrd.org.do

>

EAN REPUBLICA DOMINICANA participated in important national healthcare fairs and seminars, published articles on applications of the system in the healthcare sector and released its first healthcare sector brochure. EAN REPUBLICA DOMINICANA is also starting to work with the Service Sector in order to promote the use of the EAN•UCC system. It started celebrating a major annual event: "Jornada EAN". It started publishing its quarterly bulletin which goes to all our members and potential members. It started working on the implementation of ISO 9002 Project.

• ECUADOR

ECOP - ECUATORIANA DE CODIGO DE PRODUCTO
(JOINED IN 1992)
RUIZ DE CASTILLA 763 Y ANDAGOYA
EDIF. EXPOCOLOR, PISO 3, OFICINA 3.
QUITO
TEL: 593 2 507 580
FAX: 593 2 507 584
e-mail: ecop@uio.telconet.net

>

ECOP is promoting the EAN•UCC system in the healthcare sector with seminars, training meetings in hospitals, social services, etc. the majority of pharmaceutical products now have bar codes. In the fresh produce, transport and packaging sectors, ECOP keeps on promoting the EAN•UCC standards. Due to its efforts, all products sold in supermarkets have bar codes and bar codes are being used in administrative activities as well as in governmental offices.

• EGYPT

EAN EGYPT (JOINED IN 1996)

• EL SALVADOR

EAN EL SALVADOR (JOINED IN 1998)
9th. AVE. NORTE Y 5th. CALLE PONIENTE
SAN SALVADOR - CENTRO AMERICA
TEL: 503 221-3212
FAX: 503 271-1940
e-mail: diesco.eansal@salnet.net

>

In the healthcare and textiles sector EAN El Salvador is promoting the Electronic Catalog as a Data Alignment Tool. The use of the EAN•UCC standards in the textile industry has been applied only for those companies who sell to the three major department stores. The implementation of a CUSTOMS EDI PROJECT, with the Finance Ministry, through their Customs General Direction. They have 45 member companies, between Customs Agents, Importing companies, Shipping and Transport companies. They are using CUSCAR, CUSDEC, and eventually they will use FINPAY. There was also the Creation of the National Logistics Committee.

• ESTONIA

EAN EESTI (JOINED IN 1993)
TULIKA 19,
10613 TALLINN
TEL: 372 6 50 50 63
FAX: 372 6 50 50 93
e-mail: info@ean.ee
web site: www.ean.ee

>

The Estonian EDI Association together with EAN EESTI organised meetings with the companies interested in the use of EANCOM® in the transport sector. EAN-EESTI renewed the structure of the membership database to make it accessible through the internet by all the member companies. Global Location Numbers were also allocated to all the member companies. EAN EESTI started to issue periodical newsletter for its membership. More than 200 Powerpoint slides and presentations on the EAN•UCC system were translated into the national language and used on several seminars and informational meetings.

• FINLAND

EAN FINLAND OY (JOINED IN 1977)
ALEKSANTERINKATU 17, P.O. Box 1000
00101 HELSINKI
TEL: 358 9 69 69 69
FAX: 358 9 65 03 03
e-mail: sven-gustaf.lindroos@wtc.fi
web site: www.keskuskauppakamari.fi

>

The number of EAN•UCC users in Finland continues to grow rapidly. EAN FINLAND held several seminars for the trade and industry to implement the Logistics Label. It started assigning 9-digit manufacture numbers. Discussions are going on with ECR Finland to combine the two secretariats. Wholesalers are starting to migrate to the new Logistics Label.

• FRANCE

GENCOD-EAN FRANCE (JOINED IN 1977)
2 RUE MAURICE HARTMANN
92137 ISSY LES MOULINEAUX CEDEX
TEL: 33 1 40 95 54 10
FAX: 33 1 40 95 54 49
e-mail: info@gencod-ean.fr
web site: www.gencod-ean.fr

>

GENCOD-EAN FRANCE is increasing its activities in the healthcare sector. It is cooperating with EDITRANSPORT in the transport

sector. GENCOD-EAN FRANCE released a CD Rom to introduce the EANCOM® messages to the packaging industry. In the textile sector, they work in collaboration with EDITex on a project to promote the use of a software using EDI and barcodes in fashion stores and in the meat sector they are working with the national meat industry and trade as well as EAN International on traceability of meat. GENCOD-EAN FRANCE published two new brochures for ECR and has been working on XML, RFID and the interconnection of Global Location Numbers database.

• GEORGIA

EAN GEORGIA (JOINED IN 1996)
11 CHAVCHAVADZE AVE.
380079 TBILISI
TEL: 995 32 29 33 75
FAX: 995 32 23 57 60
e-mail: ktm@ean.kheta.ge
web site: www.gcci.org.ge/ean

>

EAN GEORGIA increased its number of members, especially in the pharmaceutical sector.

• GERMANY

CCG - CENTRALE FÜR COORGANISATION GMBH
(JOINED IN 1977)
MAARWEG 133
50825 KÖLN
TEL: 49 221 947 14 - 0
FAX: 49 221 947 14 - 990
e-mail: info@ccg.de
web site: www.ccg.de

>

CCG pursued many activities in the publishing, textile, furniture, transport, agriculture and healthcare sectors. In the latter, CCG organised two big events, the "Kölner Gespräche" and the fair "MEDICA". During 1999 the number of implementations of the UCC/EAN 128 transport label continued to increase tremendously. In 1999 the considerable increase of new member companies continued. Companies of new target sectors like chemical industry, meat industry, healthcare and transport are represented above the average of the new membership figures. In 1999 CCG presented EAN Standards for EDI/ADC applications on various European and International fairs like TRANSPORT, SCAN-TECH and EUROCARGO.

• GREECE

EAN HELLAS - HELL.C.A.N. SA, HELLENIC CENTRE
OF ARTICLE NUMBERING (JOINED IN 1985)
5, AGHIOU DIMITROU SQU. & 2, DIOM. KYRIAKOU STR.
145 62 KIFISSIA,
ATHENS
TEL: 30 1 8083 931
FAX: 30 1 8019 156
e-mail: hellcan@elkeshp.ath.forthnet.gr

>

Great success has been achieved in the healthcare sector through intensive promotion of the EAN•UCC system. In the defence sector, EAN HELLAS is working in close collaboration with local NCB and Supply Directorates of Air Force and Navy. In the transport sector, it is collaborating with the Greek Association of International Freight

Forwarders. EAN HELLAS is also working with ECR Hellas on the preparation of a user guide. In collaboration with the biggest distributor of periodical & daily press, EAN HELLAS provided a solution for a better management of the distribution and returns processes using the EAN system in conjunction with ISSN numbers. The Hellenic Organization of Telecommunications - one of the biggest organizations of the public sector - adopted the UCC/EAN-128 on payment slips. Six oil companies and two banks agreed for exchanging quick and precise information (products and services) through the use of EANCOM messages.

• GUATEMALA

EAN GUATEMALA (JOINED IN 1998)

EAN GUATEMALA worked actively in the healthcare sector. With the Pallet Committee, a great step ahead has been made in the packaging industry. Regarding variable weight items, 70% of them are now identified by an EAN/UCC-13. EAN GUATEMALA is now developing a guideline for the textile sector, and it has been establishing contacts with many companies that belongs to this sector and already use the EAN•UCC system to identify their products. EAN GUATEMALA also supported the creation of the Logistics Association of the Country. On May 99, it gave the first seminar about Electronic Catalogues. EAN GUATEMALA performed the last tests for the use of EDI via the Internet. EAN GUATEMALA also gave an ECR seminar about the best practices in the supply chain.

>

HKANA organised the 2nd Annual Efficient Consumer Response (ECR) Asia Conference and e-commerce for Supply Chain Management Summit'99 in October. In conjunction with the University of Hong Kong, a Technology Centre for Electronic Commerce Standardisation was launched to promote e-commerce in Hong Kong. HKANA organised series of trainings and workshops to educate the public and industry. In the year of 1999, in addition to the FMCG sector, the major market of the Association, HKANA concentrated on two other sectors: healthcare & apparel/general merchandise. EDI for pharmaceuticals has been well developed and in the year of 1999, HKANA was working closely with Hospital Authority in Hong Kong to deploy its EZ*TRADE EDI service to non-pharmaceutical products. An industry seminar was held in July and the Hospital Authority officially kick-started the EDI (based on EANCOM®) with HKANA for the non-pharmaceutical sector. In view of the growing demand of efficient communication for the global support.

>

In the processed foods and seafood exports sector, EAN India designed applications for traceability using the EAN•UCC system, which were accepted by the Quality Enforcement Agencies for compliance with international food safety/security norms. EAN India participated in the setting up of the Indian ECR board. In the defence sector, the first steps were taken to use the EAN•UCC system in the inventory processes in line with NATO best practices. EAN India studied the use of the EAN•UCC standards in the paper industry and in the pharmaceutical sector. Discussions were held with service providers (AIDC/EDI) to promote the use of the EAN•UCC system and EANCOM® standards. EAN India worked with the government to educate the export sectors on the use of the EAN•UCC system for export items. EAN India made presentations at more than 30 workshops/seminars jointly with apex industry associations and Government agencies and participated in the first ever AIDC exhibition/conference. All this contributed a high increase in members in 1999.

Many pharmaceutical factories in Indonesia are using the EAN•UCC system and EAN INDONESIA is now in the stage of convincing the Government of Drug and Food Inspection to make the use of bar codes mandatory. EAN INDONESIA held presentations at packaging and transportation seminars and to licencing authorities. All export oriented garment factories use the EAN•UCC standards. As a fall-out of the Asian economics crisis, a small number of bar code users has suspended their participation. However, due to EAN INDONESIA promotional efforts the number of users has increased substantially, reaching 1100 by the end of 1999. EAN INDONESIA has also taken the initiative to establish the ECR Indonesia Board, for which it acts as the Executive Secretariat. EAN INDONESIA web site is commencing to promote the commercial operation of its members.

MANC made successful contacts within the healthcare industry, involving both the authorities and the suppliers and distributors. A briefing, done by EAN International, on the benefits of the EAN•UCC system in the healthcare sector was held in July 1999, to introduce the subject to users in the governmental and private sectors. The other sectors will be focussed on at a later stage. With the formation of the ECR Malaysia (ECRM) suppliers and retailers have established a closer and more co-ordinated linkage in supply chain management. The ECRM Board has also set up Working Groups to handle fundamental issues as standardisation of item coding and electronic communication. Promotion of the EAN•UCC standards and their applications in the retail and supply sectors is continuously being done through publications, briefings and visitations.

EAN Romania has initiated contacts with the National Health Insurance and they also started working together with the Romanian Center for Commerce developing projects for improving logistics in transport and distribution. They are also working in close relationship with the Defence Ministry - Dpt. of Logistics on codification matters. The membership increased by 17% and the association also held 15 technical seminars together with the Chambers of Commerce and Industry.

Following an agreement with the Russian Health Ministry to use EAN numbers for a database of pharmaceuticals, the Ministry's Information Center has been linked to the UNISCAN/EAN RUSSIA electronic catalog via the EDI-UNISCAN system. UNISCAN/EAN RUSSIA signed an agreement with the PEPI Association (organization of transport-EDI users) on joint implementation of EDI systems in the transport sector, creation of transport logistic centers and development of standards for transport EDI messages. PEPI participates in the work of EAN RUSSIA's GOST R/TC 355/SC 3 "EDI-EANCOM". In 1999, GOST R/TC 355 "Automatic Identification" signed cooperation agreements with Technical Committees 246 "Containers", 22 "Information Technologies" (resulting in the creation of a joint working group on identification cards) and 223 "Packaging" (creating a subcommittee within TC 223 headed by UNISCAN/EAN RUSSIA), and established working relations with the Postal Department of the Russian Communications Ministry.

The information pack covers the usage of the EAN•UCC system in all target sectors. They help users create and understand the transport label. EAN SLOVAKIA has created a new info pack to help improve the use of the EAN•UCC system in retail, wholesales, the book industry and transport. It also covers the location numbering and EDI. Thanks to the release of a new info pack, there was a huge increase of members. Many publishers were amongst them, therefore the majority of serial publications are marked with prefix 858. Since the release of the European Standards (EN 797, EN 799), EAN SLOVAKIA translated 4 European Standards (EN 1556, ENV 12646, ENV 12647, ENV 12648) and prepared them for standardisation. They will be released during 2000. At the end of 1999 we also started with EN 1635, EN 1571, EN 1572 and EN 1573. EAN SLOVAKIA has modified the web site for prompt registration. Becoming a member takes no longer than 1 day and no personal visit is necessary. To support e-commerce, EAN SLOVAKIA ran two seminars on EDI and established two working groups on electronic catalogues. The first group (retailers and manufacturers) handles data fields and the second one software for product catalogue.

In the healthcare EAN South Africa liaises closely with the Department of Health who adopted the EAN•UCC system many years ago. EAN South Africa is also represented on PHISC (Private Health Information Standards Committee) as well as their sub-committees for: EDI Message Design and Coding Standards. R.M. Pearcey is a director of the newly formed PESA (Pharmaceutical Electronic Standards Association) who have adopted the EAN•UCC system for all pharmaceutical products flowing through pharmacies and will be phasing out the NAPPI code within a two-year period. They are also involved in the transport sector and in the packaging sector. Other activities include the selection of product data catalogue service. The pilot has started in March 2000.

The total number of members increased to 10,276 companies, which accounts for about 28.6% increase compared to last year. The focus of the business was on improving the awareness of ECR/SCM among Korean companies and help establish the infrastructure in terms of core technologies including EAN•UCC system. On March 24, the ECR/SCM Korea Board was officially established to integrate the efforts of user companies and to implement ECR/SCM applications. Other efforts were promotional activities amongst business groups, two international seminars, ECR/SCM publications, etc... 91 manufacturers agreed to adopt EAN/UCC-14 on the 8,000 items they manufacture. In phase 2 of the project (2000) other ECR/SCM applications will be launched such as CRP, ASN, CAO,....

EAN Sverige is working together with the Trade Association for the healthcare industries. The usage of EANCOM® in healthcare is strongly supported by the usage of EANCOM® in the Public Sector E-Commerce Initiative in Sweden. In transport they are working together with EDIFACT Transport (recently changed into "E-com Logistics. They are jointly supporting the usage of a standard transport label (based on EAN standards) and the usage of SSCC. In packaging, they are involved in a new system of plastic crates and pallets identification, tracking and tracing by means of UCC/EAN 128 and RFID. For textiles there is a new project run by small and medium sized retail and trading partners. EAN Sverige participates by defining solutions for identification, logistics and business processes. Tracing of meat and fresh produce are also of great interest. The key achievements of the association include the introduction of a verification service for all ESAP User Profiles of EANCOM® in Sweden and the introduction of GEPIR.

sector, EAN UKRAINE actively promoted the EAN•UCC standards towards the national transport industry, with several seminars in different regions of Ukraine. EAN UKRAINE took part in the national exhibition "Transport and Logistics '99". At the seminar on the new logistic technologies organized during the exhibition, the paper "Implementation of the Standard EAN•UCC Logistic Label" has been presented and included into the exhibition's bulletin. EAN UKRAINE started the cooperation with the Customs aiming to implement the EAN•UCC standards for transit freight traffic control. In the textile sector, a seminar was held on the application of the EAN•UCC standards in the textile and apparel industry. The development of sectorial recommendations are in progress. The number of scanning retailers in the country has increased. EAN-UKRAINE actively participated in the working group developing the draft of national Electronic Commerce Law. The construction of the National Electronic Product Catalogue is in progress.

>

In conjunction with EAN International, e centreUK exhibited in December at Intermodal, a leading transport trade show. e centreUK has an active transport group of members specialising in transport EDI, the LOTUS group. In Defence NATO military experts pledged to introduce commercial standards into transportation throughout NATO. It is expected that EAN•UCC standards will be included in new military transport standards when they are promulgated in the near future. For the meat sector a joint Western European NO's/AIM Europe initiative led by e centreUK and AIM UK was held to secure EU funding to promote the use of UCC/EAN-128 to the meat trade across the EU. Other significant issues were the improved member services achieved by implementing the first phase of a new office computer system; the number of users (net membership after deduction of cancelled memberships) continued to rise; a major feature of the year was concerted direct lobbying and interaction with Government over the proposed Electronic Communication.

Throughout 1999, the Uniform Code Council worked on developing and promoting global standards, strategies and solutions that would produce benefits and efficiencies for the worldwide user community. Currently, the UCC provides support to approximately 240,000 member companies in twenty-three different industries to help them conduct business efficiently with any company, in any industry, anywhere in the world. The UCC and EAN's close partnership and cooperation has produced strong global leadership and vision that delivers value to companies large and small, all around the world.

In 1999, the UCC continued to promote the development of Reduced Space Symbology (RSS) and composite symbology to bring the benefits of the EAN•UCC system to space-constrained items. In order to leverage the potential of Radio Frequency Identification (RFID), the UCC and EAN International are working together with users, manufacturers and regulatory bodies to develop global standards for a UHF frequency range. The UCC announced an Electronic Commerce strategy in 1999 that will utilize Extensible Markup Language (XML) as a key component of its development efforts. UCCnet, the UCC's new electronic trading community subsidiary, continues its further development. Providing a universal foundation for electronic commerce, UCCnet will allow trading partners to have synchronized UCC and EAN item information, as well as access to compliant business applications and services.
