Data model

Quick links

- [Validations](#)
- [Using the Uniform Dataset](#)

In healthcare, there is a coordinated data model determined by medical device suppliers, healthcare institutions and industry organisations.

The fields in the data model

There are requirements from different countries to deliver product information, with different regulations, languages and business needs. There are also requirements from legislation. In the list of fields, you will find the product information that is required per country and per legislation. Which data must be entered in which field and which article data are mandatory.

Data model - GDSN/GS1 Data Source Healthcare
